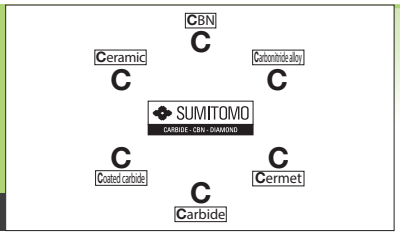
SUMITOMO ELECTRIC

CONTENTS

A — Grades
A1 to A37



- Grades for Turning
- Grades for Milling
- Grade Comparison Chart
- Chipbreaker and Grade Selection Guide
  - Steel Turning
  - Stainless Steel Turning
  - Cast Iron Turning
  - Exotic Alloy Turning
  - Non-Ferrous Metal Turning
  - Hardened Steel Turning
  - Small Lathes
- Coated Carbide
- Cermet
- Carbide
- CBN
- Polycrystalline Diamond
- Ceramics
- Material Properties

B — Inserts
B1 to B135

- Indexable Insert Identification Table
- Grade Comparison Chart
  - Coating, Cermet
  - Cemented Carbide, Ceramics
  - CBN, Polycrystalline Diamond
- Chipbreaker Comparison Chart
- Chipbreaker Selection
- Negative Inserts
- Positive Inserts
- Ceramic Negative Inserts (With Hole/Without Hole)
- Ceramic Positive Inserts (Without Hole)
- Ceramic SG (SumiNotch) and Ceramic LNGX
- Precautions when Using Wiper Inserts

C — Toolholders
C1 to C62

- External Toolholder Series
- Toolholder Identification and Cutting Edge Position Dimension
- Negative Insert Applicable Holders
- Positive Insert Applicable Holders
- T-REX Tool Holders
- Tool Holders for Aluminum Wheel Turning
- Double Clamp Tool Holders

D — Small Parts Machining
D1 to D34

- Small Lathe Selection
- General Features of Small Lathes
- Insert Grade Selection
- Chipbreaker Selection
- External Holders
  (Refer to Chapters E / F for Boring Bars / Grooving Tools / Cut-Off Tools)

E — Boring Bars
E1 to E75

- Selection Guide for Boring Tools
- Boring Tools Identification Table
- Selection Guide for Boring Tools
- Boring Tools Series
- Multi-functional Small Lathe Tools
  Twin Head Holder
- For Bottom Facing
- For Profiling
- For Through Boring
- For Shoulder Milling
- For Very Small Diameter / Small Diameter Turning

F — Grooving / Cut-off Threading
F1 to F86

- Grooving Tool Series Selection Guide
- Grooving Tools
  - Triangular Insert for Shallow Grooves (External/Internal)
  - For External/Internal and Facing
  - For Hardened Steel
- Cut-off Toolholder Series Selection Guide
- Cut-Off Tools
  - SumiGrip Jr. / SumiGrip
  - Small Diameter Cut-Off Tool Holders
- Threading Tool Series Selection Guide
- Basics of Threading
- Threading Tools
  - SSTE / SSTI
  - For External/Internal Diameters

G — Tooling Systems / Polygon Shank / Cartridges
G1 to G32

- General Features of Tooling Systems
- ICTM HSK Tooling Systems
- Polygonal Taper Shank SumiPolygon
- Modular Taper Shank Supported by 2 Faces
- HSK Tooling Systems Supported by 2 Faces
- Smart Damper
- IGETALLOY ABS System
- Micro Units
- Cartridge Units
- Boring Quills / Carbide Line Boring Bars

A Insert Grades
B Indexable Insert
C External Holders
D Tools for Small Lathes
E Boring Bars
F Grooving Tools / Cut-Off Tools / Threading Tools
G Tooling Systems / Cartridges
H Milling Cutters / Modular Tools / Milling Cutters (Special Purpose)
I Endmills
J Drills / Reamers
K Carbide Materials / Brazed Tools
L CBN - SUMIBORON
M PCD - SUMIDIA / Binderless PCD / SUMICRYSTAL
N Parts / Technical Guidance / References
O Index
A.L.M.T.

- Milling Cutter Selection Guide
- Grades for Milling
- Cutter Identification Table
- Insert Catalog No. Nominal
- Face Milling
- Shoulder Milling
- High Feed Milling
- Multi-purpose (WMM)
- Radius Milling
- R/3D Profiling
- Groove / T-Slot
- Chamfering
- Non-ferrous Metal Milling
- High-speed Cast Iron Milling
- Modular Tools
- Special Purpose Cutters
  - Goalmill Series
- Discontinued Milling Cutters

H Milling Cutters / Modular Tools — H1 to H262

- Selection Guide
- Cutting Edge Length List by Diameter
- Endmill Coating Grades
- Square / Radius Endmills (Coated)
- Ballnose Endmills (Coated)
- AURORA Coat Endmills
- SUMIDIA Coated Endmills
- Non-ferrous Metal Milling
- Milling of Exotic Alloys
- Milling of CFRP
- Cemented Carbide and Hard Brittle Material
- Binderless PCD Endmills
- CBN Endmills for Hardened Steel
- PCD Endmills for Non-Ferrous Metals

I Endmills — I1 to I122

- Drill Selection Guide
- Application Range of Major Drills
- Drill Coating
- General-purpose
- For Spot Facing
- For Deep Hole Drilling
- For Extra Small Hole Drilling
- For Deep Drilling/Pocketing
- For Medium to Large
- Diameter Drilling
- For Non-ferrous Metal Milling
- For Drilling of Heat-Resistant Alloys
- For Milling of CFRP
- For Drilling of Thin Sheets
- Indexable Insert/Head Type
- Reamers
- HSS

J Drills Reamers — J1 to J164

- Carbide Material Features and Applications
  - Plate Blanks
  - Rod Blanks
  - Special Rod Blanks
- JIS Type Inserts for Carbide Tool Holders
- JIS Type Carbide Tool Holders
- Jig Boring Tools IJB Type

K Carbide Materials — K1 to K12

- CBN - SUMIBORON Series
- Coated CBN - SUMIBORON Series
- Guidance for CBN - SUMIBORON Grades
  - Hardened Steel Cutting
  - Cast Iron Cutting
  - Sintered Component Machining

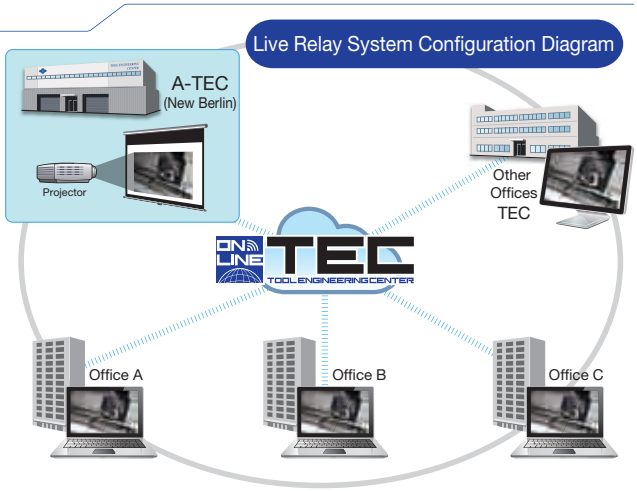
Online TEC

Live Relay Example (1) (Lecture)

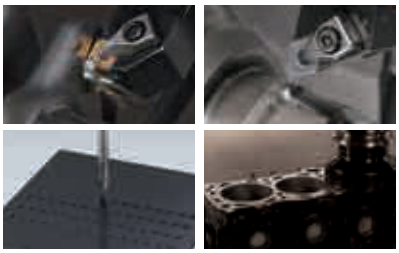
Live Relay Example (2)
(Technical Consultation)



Live relays in which cutting videos can be viewed from remote locations in real time with two-way communication are possible. When time or distance makes a visit to a Tool Engineering Center difficult, customers can view live relays at their own sites and receive evaluations as requested.

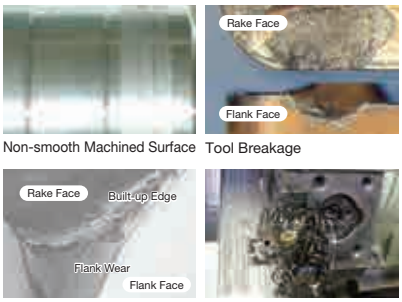
Seminars

Test Cutting



We have a range of machine tools and measurement instruments available to conduct various test cutting in order to support the requirements of our various customers.

■ Machining Failure Examples



Non-smooth Machined Surface

Tool Breakage

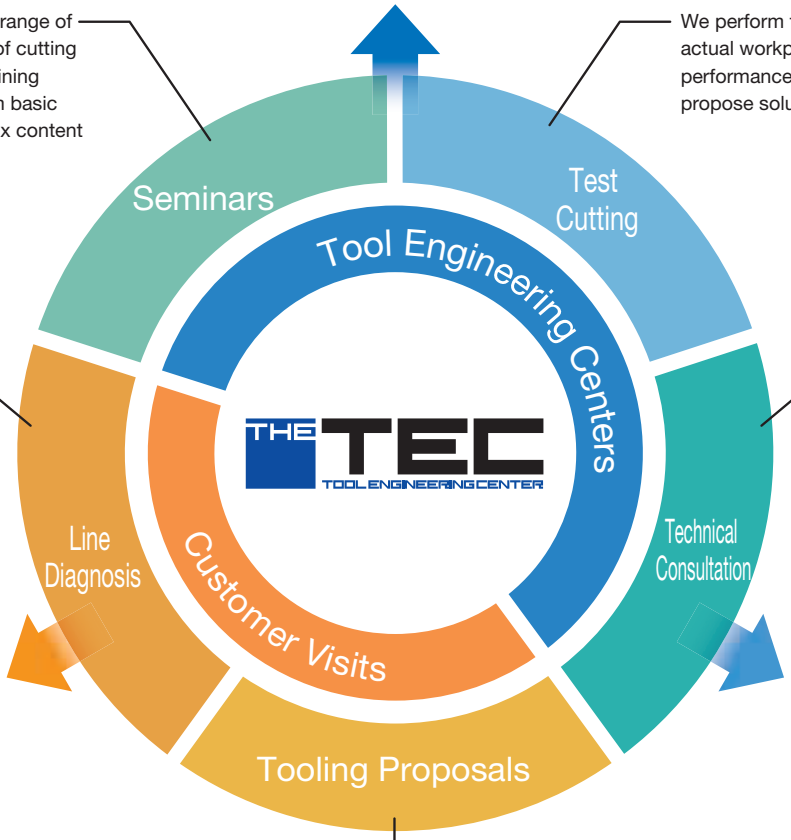
Tool Wear and Cutting Edge Structure

Unsatisfactory Chip Control

Supporting the Development of Knowledge and Technology

Acquire a wide-range of understanding of cutting tools and machining technology from basic through complex content

We perform test cutting on customers' actual workpieces and use the latest performance evaluation technology to propose solutions



Support of machining improvement activities through investigation of the current machining lines, proposals for improvements and test cutting

Troubleshooting and technology proposals based on the latest tool information and machining databases

We also can help solve problems by visiting your production site

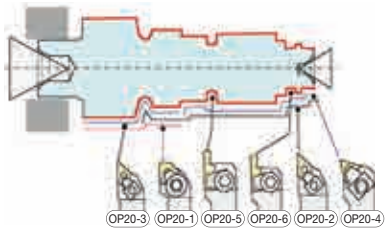
Proposing solutions to your problems

Proposals for solutions to potential problems, estimating tool life for tooling and tool selections for newly established production lines

Line Diagnosis

Technical consultation and line diagnosis are performed in order to propose the ideal solutions to our customers.

Tooling Proposals



We propose optimal tools, cutting conditions, estimated tool life and machining times.

Technical Consultation

Improvements are proposed based on investigation of various tool damage and machining databases.

Contact your local sales office for details.

Dimension symbols are compliant with ISO13399

The following table shows ISO13399-compliant dimension symbols. Content corresponding to the sample symbols/notations are shown below. Tool shape diagrams and stock charts use the symbols and notation examples from the table below. Please contact Sumitomo Engineering Dept. for more details regarding ISO13399.

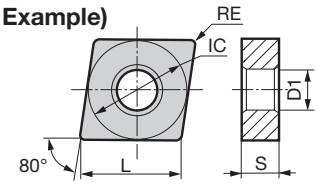
(1) Inserts (For Turning / For Milling)

Symbol	Notation Example	Description
AN	Main Blade Relief Angle	Clearance angle major
APMX	Undercut Depth, Maximum Depth of Cut	Depth of cut maximum
BS	Wiper	Wiper edge length
CDX	Machining Groove Depth, Depth of Cut	Cutting depth maximum
CHW	Chamfering	Corner chamfer width
CW	Width of Cut	Cutting width
D1	Bore Dia.	Fixing hole diameter
DMIN	Min. Bore Dia.	Minimum bore diameter
IC	Inscribed Circle	Inscribed circle diameter
INSL	Length	Insert length
L	Cutting Edge Length, Overall Length, Length	Cutting edge length
PDX	X Direction	Profile distance ex
PDY	Y Direction	Profile distance ey
PNA	Thread Ridge, Thread Ridge Angle	Profile included angle
RE	Nose Radius	Corner radius
RER	Nose Radius	Right side corner radius
REL	Nose Radius	Left side corner radius
S	Thickness	Insert thickness
W1	Height, Width	Insert width
WF	Cutting Edge, Cutting Edge Distance	Functional width

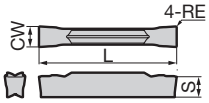
(2) Tool Holders For Turning

Symbol	Notation Example	Description
APMX	Undercut Depth	Depth of cut maximum
B	Width	Shank width
BD	Body Dia., Cutting Edge	Body diameter
CDX	Machining Groove Depth, Depth of Cut	Cutting depth maximum
CRKS	Screw	Connection retention knob thread size
DC	Work Dia.	Cutting diameter
DCB	Shank Dia.	Connection bore diameter
DCON	Dia., Mounting Dia.	Connection diameter
DCSFMS	Mounting	Contact surface diameter machine side
DMIN	Min. Bore Dia.	Minimum bore diameter
DMM	Shank Dia.	Shank diameter
DN	Neck Diameter	Neck diameter
GAMF	Rake Angle	Rake angle radial
GAMP	Rake Angle	Rake angle axial
H	Height	Shank height
HBH	Offset, Step	Head bottom offset height
HBKL	Head	Head back offset length
HBKW	Step	Head back offset width
HBL	Offset, Bottom Offset	Head bottom offset length
HF	Cutting Edge Height	Functional height
KDP	Groove Depth	Groove depth
KWW	Groove Width	Keyway width
LF	Overall Length, Overhang	Functional length
LH	Head, Head Length	Head length
LHD	Head	Head lengh
LS	Shank Length	Shank length
LSCX	Clamping Length, Cutting Edge	Clamping length maximum
LU	Usable Length	Usable length
LUX	Effective Overhang	Usable length maximum
WF	Cutting Edge, Cutting Edge Distance	Functional width

(Turning Insert Example)



(Grooving Insert Example)



(External Holder Example)

Fig 1

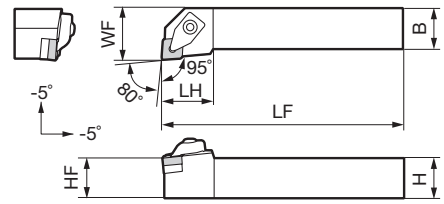


Figure shows right-hand (R) tool.

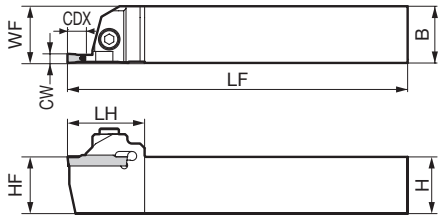
(Grooving Tool Holder Example)

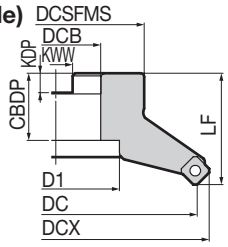


*1 The symbols in the above table are compliant with ISO13399 and do not include symbols unique to our company.
*2 As symbols under review are not included, these may change over time.

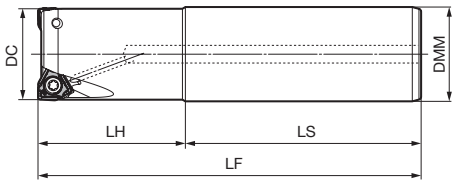
(3) Cutters / Indexable Endmills

Symbol	Notation Example	Description
APMX	Max. Depth of Cut	Depth Of Cut Maximum
BD	O.D.	Body Diameter
BDX	Max. O.D.	Body Diameter Maximum
CBDP	Mounting Depth	Connection Bore Depth
CRKS	Screw	Connection Retention Knob Thread Size
CW	Width	Cutting Width
DBC	Hole Position	Connection Bore Diameter
DC	Dia., Cutter Dia.	Cutting Diameter
DCB	Bore Dia.	Connection Bore Diameter
DCON	Mounting Dia.	Connection Diameter
DCSFMS	Boss	Contact Surface Diameter Machine Side
DCX	Max. Dia., Cutter Dia.	Cutting Diameter Maximum
DMM	Shank	Shank Diameter
DN	Diameter	Neck Diameter
H	Width	Shank Height
KDP	Keyway Depth	Groove Depth
KWW	Keyway Width	Keyway Width
LBX	Length	Body Length Maximum
LF	Height	Functional Length
	Overall Length	Functional Length
	Effective Length, Overhang	Functional Length
LH	Head	Head Length
LS	Shank	Shank Length
LU	Length	Usable Length
OAL	Overall Length	Overall Length
RMPX	Maximum Ramping Angle	Maximum Ramping Angle
SNT	Key Groove Width	Keyway Width
THUB	Thickness	Hub Thickness

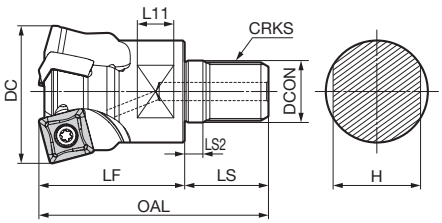
(Shell Type Example)



(Shank Type Example)



(Modular Type Example)



(4) Endmills

Symbol	Notation Example	Description
APMX	Cutting Edge Length	Depth Of Cut Maximum
CHW	Chamfering	Corner Chamfer Width
DC	Dia.	Cutting Diameter
DMM	Shank Dia.	Shank Diameter
DN	Head Dia.	Neck Diameter
LF	Overall Length	Functional Length
LFS	Neck Length	Functional Length Secondary
LU	Neck Length	Usable Length
RE	Radius	Corner Radius

(5) Drills / Reamers

Symbol	Notation Example	Description
BD	Diameter	Body Diameter
BDX	Diameter	Body Diameter Maximum
CW	Machining Width	Cutting Width
DC	Dia.	Cutting Diameter
DCB	Shank Dia., Bore Dia.	Connection Bore Diameter
DCON	Shank Dia.	Connection Diameter
DCSFMS	Flange Dia., Boss	Contact Surface Diameter Machine Side
DF	Diameter	Flange Diameter
DMM	Shank Dia.	Shank Diameter
LBX	Body	Body Length Maximum
LCF	Flute Length	Length Chip Flute
LF	Shoulder Length, Length	Functional Length
LFA	Bolt	A Dimension On Lf
LFS	Length	Functional Length Secondary
LH	Neck Length	Head Length
LPR	Overhang Length	Protruding Length
LS	Shank	Shank Length
LU	Effective Length	Usable Length
LUX	Neck Length	Usable Length Maximum
OAL	Overall Length	Overall Length
PL	Tip	Point Length
WBTHK	Web Thickness	Web Thickness

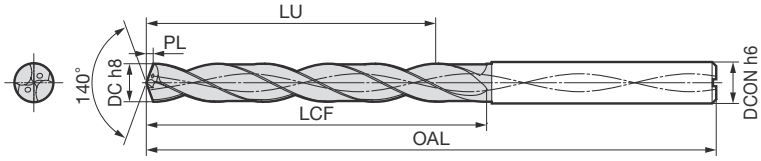
(Drill Example)



Notice

Thank you for using the Sumitomo Electric Carbide, Inc, Cutting Tool General Catalog

- This catalog presents the major items in the Sumitomo Cutting Tools product line.
  The catalog is organized as follows:
  (1) Cutting Tool Grade
  (2) Cutting Tool Products (Carbide)
  (3) CBN - SUMIBORON / PCD -SUMIDIA Products

  • Ask for our individual product brochures with most current product information or visit www.sumicarbide.com to download digital versions.

- This catalog is current as of July 2020.

- As a result of our ongoing research, products may reflect enhancements in quality, performance, and specifications not listed in this catalog. Please take note of this.

- To order CBN - SUMIBORON / PCD - SUMIDIA products, contact your nearest Sumitomo Electric Carbide, Inc. Sales Representative or distributor. For inquiries or other requests, feel free to contact your nearest sales office.

Stock Symbols

- The following symbols indicate whether products are in stock.

Stock Symbols	●: Standard stocked item ★: Worldwide Warehouse Item ▲: Limited Avaibility Item, made to order, or discontinued (please confirm stock availability).	Blank: Made-to-order item — mark: Not available

Meaning of Icons

Common

New : New item to Sumitomo Electric Carbide, Inc.

Grade

ISO classification of work material:

Holders

Example:

Milling Cutters

Example:

Max. Depth of Cut (Inch cutters will show inch dimensions)

Cutting edge angle
(not listed for ballnose blade types)

Drill

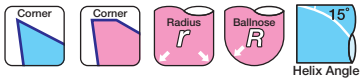
Example:

L/D (Example) | Internal Coolant Supply | Indexable

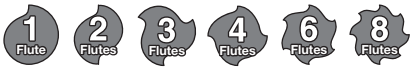
Endmills

Coating Type (Example):

Shape:



No. of teeth:



Application (Example):

Safety Notes

Grades T1000A / T1500A / T1500Z / T2500Z

T1000A : High-hardness cermet with outstanding wear resistance and toughness. Creates high dimensional accuracy for continuous steel machining or finishing of powdered metal or cast iron.

T1500A : A general-purpose cermet made from hard grains with different grain sizes, delivering functionality that provides an excellent balance of wear resistance and toughness, along with good surface finish quality.

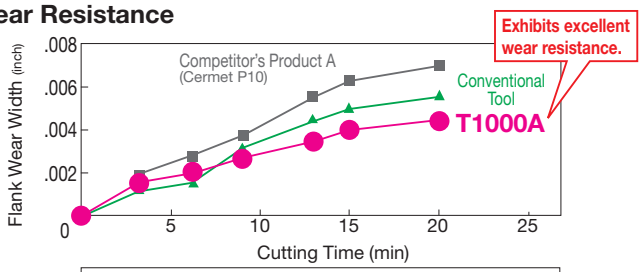
T1500Z : Incorporates Brilliant Coat® PVD coating with excellent lubricity to provide better wear resistance and consistent surface finishes in low-speed cutting applications such as machining of small products or low carbon steel.

T2500Z : Features Brilliant Coat® PVD coating along with optimized substrate for doubling breakage resistance in moderate to interrupted cutting applications.

Performance

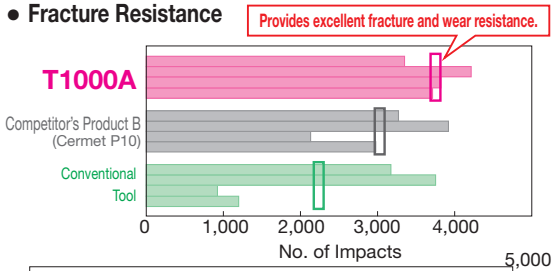
T1000A

• Wear Resistance



Part Material: 4135 Insert: CNMG432ESU
Cutting Conditions: v_c=1,050 SFM, f=0.008 IPR a_p=.060", Dry

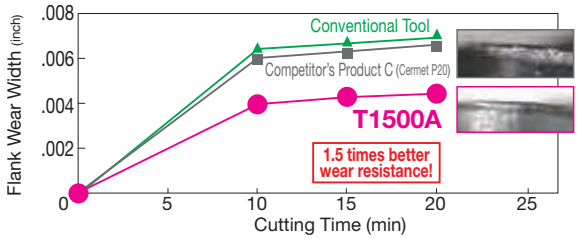
• Fracture Resistance



Part Material: 4135 Insert: CNMG432ESU
Cutting Conditions: v_c=755 SFM, f=0.008 IPR, a_p=.040", Wet

T1500A

• Wear Resistance



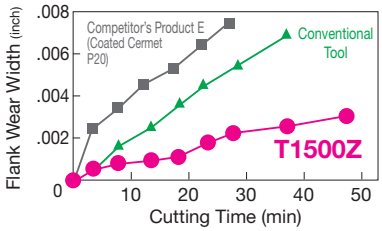
Part Material: 4135 Insert: CNMG432ESU
Cutting Conditions: v_c=755 SFM, f=0.008 IPR, a_p=.040", Wet

• Machined Surface Quality

Part Material: 1045 Insert: DNMG431ELU
Cutting Conditions: v_c=490 SFM, f=0.005 IPR, a_p=0.004", Wet

T1500Z

• Wear Resistance



Part Material: 4135 Insert: CNMG432ESU
Cutting Conditions: v_c=755 SFM, f=0.008 IPR, a_p=.040", Wet

Grades

ABSOTECH AC8015P / ABSOTECH AC8020P / ABSOTECH AC8025P / ABSOTECH AC8035P / ABSOTECH AC1030U

Covers a wide range of machining applications from high-speed to interrupted cutting and small lathes

AC8015P : Development of crater damage is suppressed by controlling the orientation of the alumina crystal grains. Achieves long, stable tool life during high-speed and high feed cutting.

AC8020P: Alumina coating with even higher strength balances outstanding stability and wear resistance in turning mill-scale on forged material. Gold-colored coating makes used corners easily identifiable.

AC8025P : Our 1st recommended grade for turning steel. Surface smoothing technology significantly suppresses adhesion of work material components. Achieves long, stable tool life with various cutting speeds and work materials.

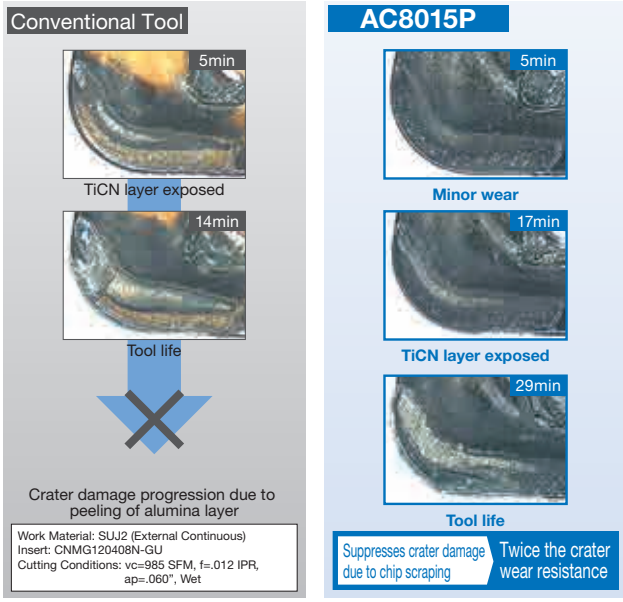
AC8035P : Tensile stress removal of the coating layer greatly improves fracture resistance. Achieves long, stable tool life during heavy interrupted cutting.

AC1030U : Employs a new PVD coating, and a dedicated tough carbide substrate. High-quality cutting edge grade suppresses adhesion and micro-chipping, realizing excellent machined surface quality.

Performance

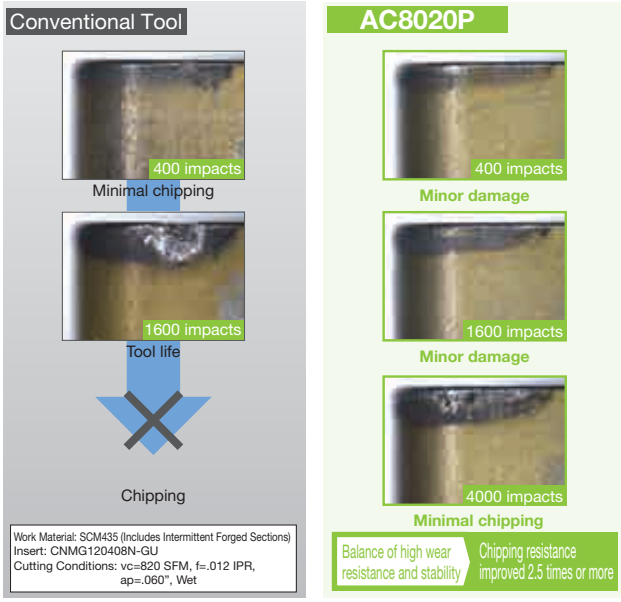
AC8015P

● Alumina crystal grain orientation control technology suppresses crater damage due to chip abrasion



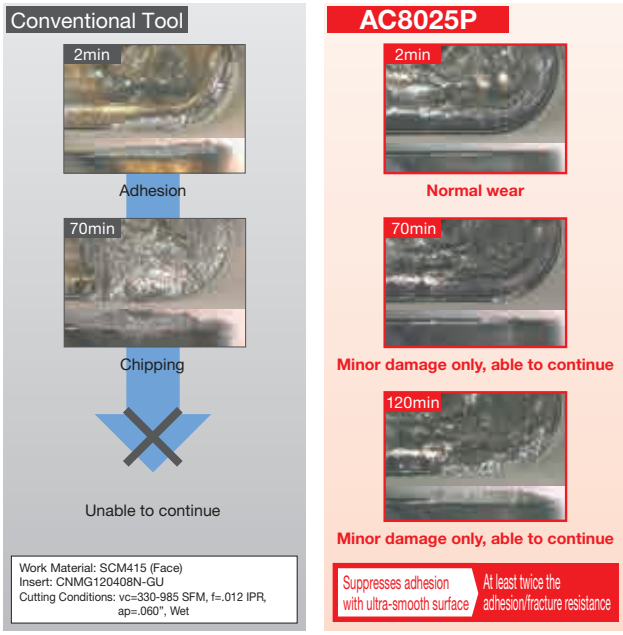
AC8020P

● Alumina coating with even higher strength suppresses chipping



AC8025P

● Surface smoothing treatment significantly suppresses adhesion and chipping



AC8035P

● Special surface treatment reduces tensile stress in the coating layer, significantly suppressing breakages

Grades

ABSOTECH AC6020M / ABSOTECH AC6030M / ABSOTECH AC6040M / ABSOTECH AC1030U

AC6020M : Combines a high-hardness carbide substrate with excellent wear resistance and a new CVD coating with improved coating strength to achieve both excellent wear resistance and fracture resistance. Achieves long, stable tool life during high-speed cutting.

AC6030M : Our 1st recommended grade for turning of stainless steel, achieving long and stable machining. Drastically reduces the abnormal damage common in stainless steel machining, thanks to the improved coating strength and excellent adhesion.

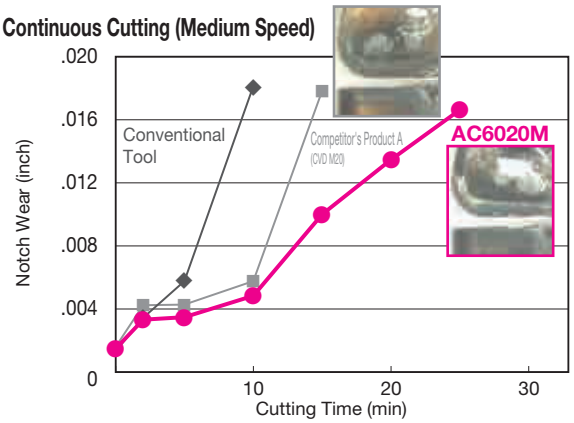
AC6040M : Drastically improves reliability in the unstable cutting range, thanks to the excellent adhesion and peel-off resistance of the new PVD coating as well as the improved fracture resistance of the dedicated carbide substrate.

AC1030U : High-quality cutting edge grade suppresses adhesion and micro-chipping, realizing excellent machined surface quality.

Performance

AC6020M

• Continuous Cutting (Medium Speed)



Workpiece Material: 316L Insert: CNMG432EGU

Grades

ABSOTECH AC4010K / ABSOTECH AC4015K / ABSOTECH AC4125K / AC420K

AC4010K : Our 1st recommended grade for machining gray cast iron.
Adopts an ultra-thick new CVD coating to realise ultra-high-speed machining at V_C = 2,300 SFM.

AC4015K : Our 1st recommended grade for ductile cast iron.
New high-adhesion, high-strength CVD coating realises both wear resistance and chipping resistance.

AC420K : Superior fracture resistance, providing excellent stability in interrupted unstable cutting and when cutting mill-scaled work.

Performance

- New PVD coated grade with excellent wear and thermal resistance

AC5005S: High-speed, high-efficiency grade with excellent high-thermal strength and outstanding wear resistance in high-efficiency turning.

AC5015S : Our 1st recommended grade for turning exotic alloys as it realizes stable tool life with high-speed, high-efficiency machining.

AC5025S : High-toughness grade for realizing stable tool life for interrupted cutting machining or mill-scaled work.

- Dedicated carbide grades with excellent thermal, wear and fracture resistance for machining titanium alloys

EH510 : General-purpose grade for titanium machining that features excellent wear and thermal resistance. For applications from roughing to finishing.

EH520 : Tough grade for titanium machining with excellent fracture and thermal resistance. Perfect for interrupted cutting and mill-scaled work.

BNC2105 / BNC2115 / BNC2125

BNC2105: Grade for high-speed finishing.
Stable performance in high-speed machining of hardened steel, thanks to outstanding wear resistance.

BNC2115: High-precision grade realizing long tool life with excellent surface roughness and stable machining.
Maintains excellent surface roughness thanks to a coating with high notch wear resistance and tough CBN substrate.

BNC2125: 1st recommended grade, balancing excellent wear resistance and fracture resistance in hardened steel machining.
Along with a tough CBN substrate, the coating combines wear resistance and toughness to achieve long, stable tool life even in high-efficiency and interrupted machining.

BN1000: For high-speed machining, BN1000 provides the highest wear resistance of all uncoated SUMIBORON grades, improving fracture resistance while maintaining an emphasis on wear resistance.

BN2000: General-purpose grade for general hardened steel machining with a high degree of fracture and wear resistance.

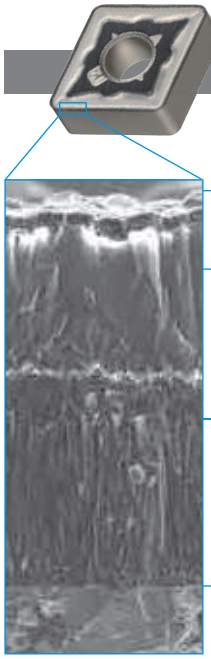
Coated Carbide

Sumitomo's Coating Series combines a proprietary tough cemented carbide substrate with a multi-layered coating for use in high-speed, high-efficiency applications on a wide range of workpiece materials including steel, cast iron and exotic alloys.

Features

ABSOTECH® : New coating technology that realizes absolute stability

CVD



Special Surface Treatment: Chipping resistance and adhesion resistance are significantly improved by special surface treatments applied to suit the application

High Strength Alumina Layer: Significantly improves the coating strength by controlling crystal growth direction

High Hardness Micro-Grain TiCN Layer: Significantly improves the coating hardness by using a fine and uniform crystal structure

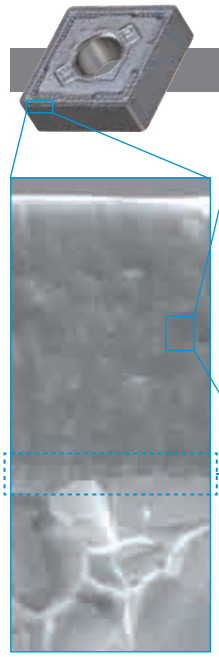
High Adhesion Technology: Significantly improves adhesion strength through a smooth interface between the coating and carbide substrate

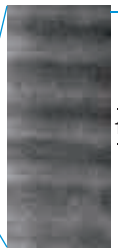
- Suppresses abnormal damage such as chipping and adhesion. Stable machining is achieved in various situations.
- Next-level high strength and high hardness coating is achieved. Achieves long, stable tool life even in high-efficiency machining.

■ Applicable Grades:

(For Steel Turning)	AC8015P, AC8025P, AC8035P
(For Stainless Steel Turning)	AC6020M, AC6030M
(For Cast Iron Turning)	AC4010K, AC4015K
(For Milling)	ACP2000, ACK2000

PVD





Our proprietary super multi-layered coating structure: Advanced nanotechnology enables nanometre-level thickness (1 nanometre is one billionth of a metre) Hardness, thermal resistance and toughness are significantly improved by alternately layering one thousand layers of super thin films

Cross Section of Cutting Edge Coating TEM Structure

High Adhesion Technology: Significantly improves adhesion strength through advanced control technology at the interface of the coating and carbide substrate

- Optimised coating composition according to application. Achieves stable machining regardless of the work material.
- Significantly improves chipping resistance by improving coating adhesion strength. Stable machining is realised even under high load conditions.

■ Applicable Grades:

(For Stainless Steel Turning)	AC6040M
(For Exotic Alloy Turning)	AC5015S, AC5025S
(For Small Lathes)	AC1030U
(For Milling)	ACU2500, ACP3000, ACK3000

Brilliant Coat® PVD

Brilliant Coat provides excellent lubricity for higher quality machining

- PVD coating with excellent wear resistance and lubricity
- Suppresses reactions with work material and realises beautiful machined surfaces

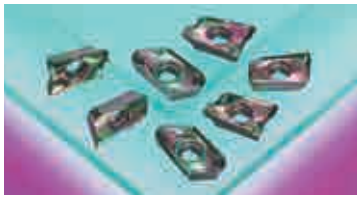
Brilliant Coat — Conventional coating

Workpiece Material: STKM13A
Insert: CNMG432ELU
Cutting Conditions: v_c=330 SFM
f=0.006 IPR
a_p=.040", Wet

■ Applicable Grade: (For Steel Turning) T1500Z

AURORA Coat (DLC: Diamond Like Carbon) PVD

Using our proprietary PVD process technology, we have developed a hydrogen-free DLC coating that is extremely hard, flat and smooth.



- Comparison of Cutting Edge Adhesion after Cutting ADC12

AURORA Coat — Uncoated Carbide

Workpiece Material: ADC12
Cutting Conditions: v_c= 1,000 SFM
f_z = 0.006 IPT
a_p= .200"
a_e= .200", Dry

- Second only to diamond in terms of hardness, this flat and smooth coating has a low coefficient of friction and provides excellent adhesion resistance to deliver better machined surface quality
- Can be used for high-speed, high-efficiency cutting of aluminum alloys, copper alloys, resins and more

■ Applicable Grades:

(For Milling)	DL1000, DL2000
(For Endmilling)	DL1000, DL1200
(For Drilling)	DL1300, DL1500

P Steel	**ACU2500**	91.6	3.8	ABSOTECH	3	· General-purpose grade covering steel, stainless steel, and cast iron machining · Adopts a carbide substrate with excellent fracture resistance and wear resistance, plus a new coating with excellent wear resistance and chipping resistance, realizing stable long tool life on various work materials	—
	ACP200	89.5	3.2	(New) Super ZX Coat	3	· Our 1st recommended grade for steel applications · General-purpose grade with an excellent balance of wear and fracture resistance · Also suitable for machining stainless steel	ACZ330
	ACP300	89.3	3.1	(New) Super ZX Coat	3	· For interrupted machining of steel · Tough grade with an emphasis on fracture resistance · Also suitable for interrupted machining of stainless steel	ACZ350
	ACP3000	89.5	3.2	ABSOTECH	3	· Our 1st recommended grade for milling steel · Carbide substrate with excellent thermal crack resistance, plus a new coating with excellent wear resistance and chipping resistance, realizes stable long tool life over a wide range of cutting conditions	ACP200 ACP300
M Stainless Steel	**ACM100**	91.4	3.3	(New) Super ZX Coat	3	· For high-speed machining of stainless steel · Adopts high-hardness micro-grained carbide substrate and super multi-layered coating to realize outstanding wear resistance	ACZ310
	ACM300	89.8	3.4	(New) Super ZX Coat	3	· Our 1st recommended grade for milling stainless steel · Adopts high-strength carbide substrate and super multi-layered coating for next-level wear resistance and fracture resistance	—
K Cast Iron	**ACK300**	91.4	3.3	(New) Super ZX Coat	3	· General-purpose grade with an excellent balance of wear and fracture resistance	ACZ310
	ACK3000	91.7	3.1	ABSOTECH	3	· Our 1st recommended grade for milling cast iron · Adopts a high thermal conductivity carbide substrate and a new coating with excellent wear resistance and chipping resistance, realizing stable long tool life over a wide range of cast iron machining operations	ACK300
N Non-Ferrous Metal	**DL1000**	92.9	2.1	AURORA Coat (DLC)	0.5	· Grade for milling non-ferrous metal, utilizing DLC coat with a low coefficient of friction and excellent adhesion resistance	—
	DL2000	91.6	3.8	AURORA Coat (DLC)	0.5	· Grade for milling non-ferrous metal, utilizing DLC coat with a low coefficient of friction and excellent adhesion resistance	—
S Exotic Alloy	New **ACS2500**	90.8	4.2	ABSOTECH	3	· First recommendation for titanium alloy applications · Carbide substrate with excellent wear and adhesion resistance, coupled with a chipping-resistant coating, balances excellent wear and fracture resistance	ACZ310
	New **ACS3000**	89.8	3.4	ABSOTECH	3	· Suitable for a wide range of exotic alloy machining applications · Realizes superb stability due to a high-toughness carbide substrate with a highly chipping-resistant coating	—

*Brilliant Coat may appear a slightly different color or luster due to light interference, but these variations do not affect the performance.

Various grades and expanded range of inserts meet a wide range of finishing needs.

Lineup includes wear-resistant T1000A, general-purpose T1500A, general-purpose coated cermet T1500Z, T2500Z and tough T2500A grades.
Expanded lineup for a wide variety of finishing applications.

Features

Uncoated

T1000A

High-hardness grade with superior wear resistance

- Improved wear and fracture resistance
- Solid solution hard phase reduces reaction with steel
- Perfect for high-speed continuous finishing of steel, cast iron, and powdered metal

Uncoated

T1500A

A general-purpose grade that provides both wear and fracture resistance with higher-quality surface finishes

- Mixing hard phases of different functionality grain size and composition improves balance of wear and fracture resistance.
- Improved cutting edge treatment technology provides beautiful finished machined surfaces.

Uncoated

T2500A

Tough grade with excellent fracture resistance and thermal crack resistance

- Fine, uniform grain structure greatly improves toughness
- Improves thermal crack resistance due to the high thermal conductivity and realizes stable, long tool life

Coated

T1500Z & T2500Z

General-purpose coated grade that employs our proprietary Brilliant Coat* PVD coating with excellent lubricity

- Excellent wear resistance provides long tool life.
- Reduces adhesion of work material for beautiful finished machined surfaces.

Cermet

IGETALLOY cemented carbides have a solid history and a wide variety of grades to suit many different applications. They are widely used and appreciated for their superior performance.

The IGETALLOY range consists of cemented carbide grades with various characteristics that correspond to the cutting tool application. This is achieved by varying the carbide components: the WC structure (main component) and additives such as TiC, TaC, and Co (binder).
The wide selection of IGETALLOY grades provides excellent wear resistance and toughness in various cutting conditions.

The IGETALLOY micro-fine grained carbide series provides micro-fine grain structure at a world-class level to deliver superior performance in small drills and other tools.

IGETALLOY micro-fine grained cemented carbides feature a WC structure between 0.2 and 1μm and are extremely strong and hard. They also provide excellent sharpness and superb surface quality on machined surfaces.
These features provide excellent performance in a variety of applications from ø0.1mm PCB drills and endmill materials to thin-bladed slitters and precision moulds.

CBN

High hardness and thermal resistance for machining hardened steel and hard cast iron. High-speed finishing of gray cast iron with long tool life is also possible.

In 1977, Sumitomo Electric Hardmetal successfully developed a revolutionary CBN sintered tool called SUMIBORON®. The main component in SUMIBORON® is cubic boron nitride with a special ceramic binder sintered under super high pressure and temperature. Compared to other conventional tool materials, CBN has higher hardness and excellent thermal resistance. With these distinct characteristics, SUMIBORON® can perform machining of hardened steel, hard cast iron and exotic alloys which was previously only done by grinding. Excellent efficiency and longer tool life can also be achieved from high-speed finishing of cast iron.

Features

Structure Features	Structure	CBN Content	Hardness (GPa)	Grades	Work Materials/Applications	Features
Pure CBN particles, firmly bonded		High	54	NCB100	Cast Iron, Titanium Alloy, Pure Titanium, Cobalt-chrome Alloy, Cemented Carbide, Cermet	· Containing no binder, its structure of directly bonded nano- to sub-micron CBN particles provides high hardness and thermal conductivity, making it highly efficient with a longer tool life when machining exotic alloys such as titanium alloys and cobalt-chrome alloys
Mainly CBN grains fused together				BN7125 New BN7115 BNC8115 BNS8125	Cemented Carbide, Chilled Cast Iron, Ni-Hard Cast Iron, Sintered Ferrous Alloy, Heat-Resistant Alloy	· High CBN content. Structure consists of strongly fused CBN grains · Suited to cutting cast iron, heat-resistant alloy, cemented carbide and other high-hardness materials
Mainly CBN grains held together with a binder		Low	27	BN1000/BN2000/BN350 BNX10/BNX20/BN500 BNC2115/BNC2125/BNC2105 New BNC2010/BNC2020/BNC300 BNC100/BNC160/BNC200/BNC500	Alloy Steel, Case Hardened Steel, Carbon Tool Steel, Bearing Steel, Die Steel, Ductile Cast Iron	· CBN grains are fused together strongly with a special ceramic binder · Strong CBN binding provides superior wear resistance and toughness when cutting hardened steel and cast iron

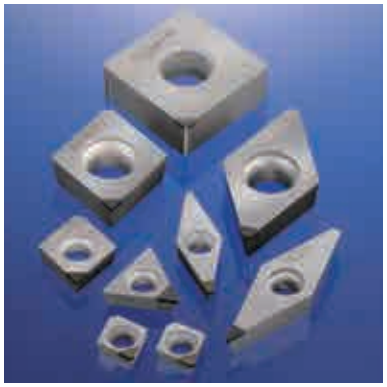
CBN SUMIBORON® Coated SUMIBORON Series ••• L2 on

Polycrystalline Diamond



Excellent wear resistance, longer tool life and high-speed, high-efficiency, high-precision cutting of non-ferrous metals and non-metals.

SUMIDIA® is a polycrystalline diamond material made from sintered diamond powder that was first created using our proprietary technology in 1978.
SUMIDIA®'s superior wear resistance achieves longer tool life in high speed, high-efficiency and high-precision machining of non-metal and non-ferrous metal applications including aluminum, copper, magnesium and zinc alloys.

SUMIDIA® Binderless uses nano-polycrystalline diamond for the cutting edge, demonstrating excellent wear resistance and fracture resistance.
In particular, it achieves extended tool life and machining accuracy superior to conventional polycrystalline diamond when machining hard brittle materials such as cemented carbide.

Features

- Diamond particles on the order of submicrons to several dozen microns, sintered at high density

Ceramic

Superb wear resistance enables ultra-high-speed machining.

Sumitomo Electric Hardmetal's Advanced Ceramic utilises a special process to produce extremely tough grades.
This new development permits ultra-high-speed cutting of cast iron, heat-resistant alloy, and ultra-hard rolled material with stability.

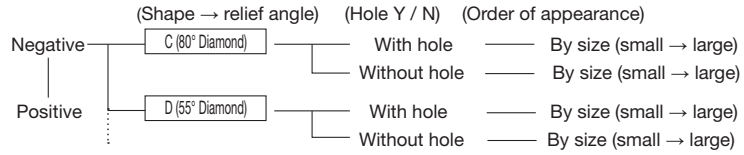
Format of This Chapter

(1) Turning insert listing order is negative type inserts followed by positive type inserts.
(2) The order of listing in each type group is as follows: C (80° Diamond) → D (55° Diamond) → R (Round) → S (Square)→ T (Triangular) → V (35° Diamond) → W (Trigon).
(3) Listing of inserts with the same relief angle are provided for those with holes and then those without holes.
(4) Inserts are grouped by shape and then further divided by size (small to large according to cutting edge length and thickness).

• Structure Diagram



Symbols in Insert Diagrams

***Symbols conform to ISO13399.**

L: Cutting edge length, IC: Inscribed circle, S: Thickness, RE: Nose radius,
D1: Hole diameter (For CBN (SUMIBORON) and PCD (SUMIDIA), L indicates side length.)

Handed Inserts

*Typically, photos show right-handed inserts.

If the bottom right reads "Photo: Left-handed," this indicates an exception where the photo shows a left-handed insert.

Insert Grades

(1) Each grade is carefully selected from Coated Carbide (CVD / PVD), Cermet, Carbide or Ceramic.
(2) The listing of CBN (SUMIBORON) and PCD (SUMIDIA) are in the dedicated sections: CBN (SUMIBORON) page L30 and PCD (SUMIDIA) page M10.

Stock Markings and Symbols

●: Standard stocked item
★: Worldwide Warehouse Item
▲: Limited Avaibility Item, made to order, or discontinued (please confirm stock availability).

Indexable Insert Identification Table

	(1)	(2)	(3)	(4)
A.N.S.I.	C	N	M	G
I.S.O.	C	N	M	G

(1) Insert Shape — Refer to Table 1

(2) Relief Angle — Refer to Table 2

(3) Tolerance — Refer to Table 3

(4) Insert Hole — Refer to Table 4

Table 1: (1) Insert Shape

Symbol	Insert Shape		Angle
C		Diamond Type	80°
D			55°
E			75°
V			35°
R		Round Type	—
S		Square Type	90°
T		Triangular Type	60°
W		Trigon Type	80°
A		Parallelogram Type	85°
K			55°
H		Trigon Type	120°
O		Octagonal Type	135°
L		Rectangular Type	90°
M		Diamond Type	86°

Table 2: (2) Relief Angle

Symbol	Relief Angle
B	5°
C	7°
D	15°
E	20°
F	25°
N	0°
P★	11°
O	Others

★ mark indicates inserts that are sometimes used with a 10° relief angle.

Table 3: (3) Tolerance (inch)

Symbol	Tolerance of Nose Height (inch)	Inscribed Circle (inch)	Thickness (inch)
A	±0.0002	±0.001	±0.001
F	±0.0002	±0.0005	±0.001
C	±0.0005	±0.001	±0.001
E	±0.001	±0.001	±0.001
G	±0.001	±0.001	±0.005
J★	±0.0002	± .002 to ± .006	±0.001
M★	± .003 to ± .008	± .002 to ± .006	±0.005
U★	± .005 to ± .015	± .003 to ± .010	±0.005

★ mark indicates inserts that generally have sintered side surfaces. Refer to the table below (reference) for details on M class precision.

(Reference) Breakdown of M-Class Tolerance by Shape and Size

● Tolerance of Nose Height (inch)

Inscribed Circle	Triangular Type	Square Type	80° Diamond Type	55° Diamond Type	35° Diamond Type	Round Type
1/4	±.003	±.003	±.003	±.004	±.006	—
3/8	±.003	±.003	±.003	±.004	±.006	—
1/2	±.005	±.005	±.005	±.006	—	—
5/8	±.006	±.006	±.006	±.007	—	—
3/4	±.006	±.006	±.006	±.007	—	—
1	±.007	±.007	±.007	—	—	—
1 1/4	—	±.008	—	—	—	—

● Tolerance of Inscribed Circle (inch)

Inscribed Circle	Triangular Type	Square Type	80° Diamond Type	55° Diamond Type	35° Diamond Type	Round Type
1/4	±.002	±.002	±.002	±.002	±.002	—
3/8	±.002	±.002	±.002	±.002	±.002	±.002
1/2	±.003	±.003	±.003	±.003	—	±.003
5/8	±.004	±.004	±.004	±.004	—	±.004
3/4	±.004	±.004	±.004	±.004	—	±.004
1	±.005	±.005	±.005	—	—	±.005
1 1/4	—	±.006	—	—	—	±.006

Table 4: (4) Insert Hole

Symbol	Hole Y/N	Hole Shape	Chipbreaker	Shape (Cross Section)	Symbol	Hole Y/N	Hole Shape	Chipbreaker	Shape (Cross Section)
N E	No	No	No		A	Yes	Cylindrical	No	
R			One Face		M			One Face	
F			Double-sided		G			Double-sided	
W	Yes	Straight hole + single chamfer (40° to 60°)	No		B	Yes	Straight hole + single chamfer (70° to 90°)	No	
T D			One Face		H			One Face	
Q	Yes	Straight hole + double chamfer (40° to 60°)	No		C	Yes	Straight hole + double chamfer (70° to 90°)	No	
U			Double-sided		J			Double-sided	
					X	—	—	—	Special

Chipbreaker Selection

Negative — Finishing to Medium Cutting

Dimensions shown in mm

Fine Finishing

EFB — P M K N S H
Provides excellent chip control and sharp edge needed for low feed machining
0.80 | 27° | 0° | CNMG43 | C D R S T V W

EFA — P M K N S H
Profile breaker perfect for fine finishing
1.0 | 20° | 0° | CNMG43 | C D R S T V W

EFL — P M K N S H
Optimal breaker for chip control on rolled steel
1.0 | 10° | 0° | CNMG43 | C D R S T V W

EFE — P M K N S H
Excellent chip control for low to high feed machining
1.40 | 0.70 | 20° | 0° | CNMG43 | C D R S T V W

Legend

EGU — P M K N S H
Versatile chipbreaker featuring excellent wear resistance
Strong, versatile chipbreaker
0.25 | 2.05 | 25° | 7° | 0° | CNMG43 | C D R S T V W

Chipbreaker — Photo — Relief Angle — Shapes In Stock — Part Material — Features — Typical Cross Section Shape — Cat. No. for Cross Section

J=Uncoated, polished grade for Non-Ferrous materials

Finishing

ELU — P M K N S H
Effective chip control for variable depths of cut and profiling
1.5 | 1.0 | 10° | 0° | CNMG43 | C D R S T V W

ESU(J) — P M K N S H
Effective at high feed and low depth of cut
1.3 | 13° | 0° | CNMG43 | C D R S T V W

ESE — P M K N S H
Finishing breaker reduces tool wear on rake face. Effective even for high-efficiency machining.
0.1 | 1.5 | 17° | 5° | 0° | CNMG43 | C D R S T V W

EEF — P M K N S H
Exotic alloy finishing breaker with excellent chip control
1.2 | 20° | 0° | CNMG43 | C D R S T V W

ELUW — P M K N S H
High-efficiency finishing breaker with wiper edge
Wiper Insert
1.5 | 1.0 | 10° | 0° | CNMG43 | C D R S T V W

ESEW — P M K N S H
New high-feed finishing breaker with wiper edge
Wiper Insert
0.13 | 1.9 | 17° | 5° | 0° | CNMG43 | C D R S T V W

(R/L)FX — P M K N S H
Parallel breaker with superior sharp edge
1.5 | 14° | 0° | TNP33 | C D R S T V W

(R/L)FY — P M K N S H
Wide breaker with sharp edge
2.5 | 15° | 0° | TNP33 | C D R S T V W

(R/L)Q — P M K N S H
Arc-shaped ground finishing breaker
0.15 | 1.35 | 0° | TNP22 | C D R S T V W

Light to Medium Cutting

EFJ — P M K N S H
Standard chipbreaker with excellent cutting edge strength
0.18 | 1.2 | 0° | SNMG43 | C D R S T V W

(R/L)T — P M K N S H
Arc-shaped ground breaker for light cutting
0.15 | 1.65 | 0° | TNP32 | C D R S T V W

(R/L)GX — P M K N S H
Double positive chipbreaker providing superior sharpness
1.5 | 15° | 0° | SNGG43 | C D R S T V W

ESX — P M K N S H
Perform profiling and raise steps
1.35 | 0.2 | 15° | 3° | 0° | CNMG43 | C D R S T V W

EEX — P M K N S H
Standard chipbreaker designed especially for use with exotic alloys
2.0 | 16° | 0° | CNMG43 | C D R S T V W

EUP — P M K N S H
Double positive edge for optimal stainless steel cutting
2.1 | 10° | 0° | CNMG43 | C D R S T V W

Bumpy Chipbreaker | Standard Chipbreaker | Handed Chipbreaker
Break Master (CBN/PCD) | For Chamfering

C D R S T V W

(R/L)M — P M K N S H
General-purpose ground chipbreaker for medium cutting
0.15 | 2.0 | 14° | CNMG43 | 0°
C D R S T V W

EGUW — P M K N S H
Finishing breaker with wiper edge for high-efficiency medium finishing
Wiper Insert
0.3 | 2.5 | 23° | CNMG43 | 0°
C D R S T V W

Medium to Roughing

EEM — P M K N S H
Breaker with excellent fracture and crater resistance
0.05 | 2.5 | CNMG43 | 0°
C D R S T V W

EMU — P M K N S H
Economical double-sided breaker with low cutting resistance for high-feed cutting
2.5 | 0.3 | 20° | 4° | CNMG43 | 0°
C D R S T V W

EME — P M K N S H
Chipbreaker for rough cutting that supports high-feed cutting with reduced rake face wear.
0.3 | 2.4 | 4° | CNMG43 | 0°
C D R S T V W

EMX — P M K N S H
Strong cutting edge for interrupted cutting
2.3 | 0.2 | 0.4 | 20° | -15° | CNMG43 | 0°
C D R S T V W

ENZ — P M K N S H
Standard breaker with stable cutting performance
1.9 | 0.3 | 14° | 4° | CNMG43 | 0°
C D R S T V W

EGZ — P M K N S H
Extremely reliable standard chipbreaker with strong cutting edge
1.9 | 0.25 | 16° | CNMG43 | 0°
C D R S T V W

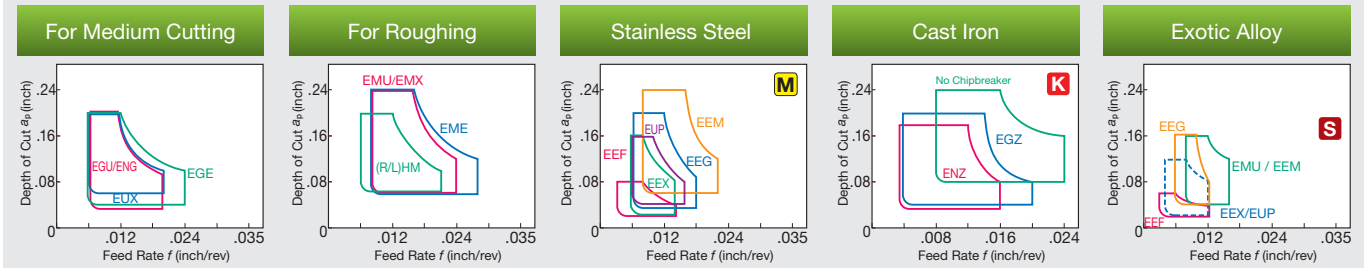
(R/L)HM — P M K N S H
Wide, M class, handed breaker with low cutting resistance for medium to rough cutting.
2.7 | 15° | 0.2 | 25° | TNM33 | 0°
C D R S T V W

(R/L)M — P M K N S H
Ground breaker with wide and gentle rake angle
0.15 | 2.95 | 10° | SNMG43 | 0°
C D R S T V W

Bumpy Chipbreaker | Standard Chipbreaker | Handed Chipbreaker
Break Master (CBN/PCD) | For Chamfering

Applicable Part Material: P Steel M Stainless Steel K Cast Iron N Non-Ferrous Metal S Exotic Alloy H Hardened Steel

Chipbreaker Application Range (Inscribed Circle of Insert up to ø.5000inch)



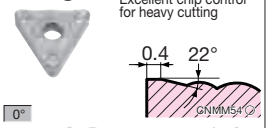
Indicated chipbreaker application ranges and shapes are representative values only. Actual values may change according to the actual catalog number. For details, refer to "Stock Items" in Chapter B.

Chipbreaker Selection

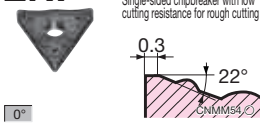
Negative Roughing

Rough to Heavy Cutting

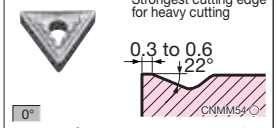
EHG — P M K N S H
Excellent chip control for heavy cutting



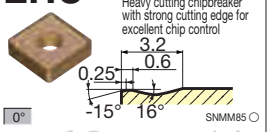
ENP — P M K N S H
Single-sided chipbreaker with low cutting resistance for rough cutting



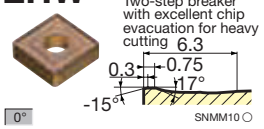
EHP — P M K N S H
Strongest cutting edge for heavy cutting



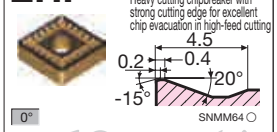
EHU — P M K N S H
Heavy cutting chipbreaker with strong cutting edge for excellent chip control



EHW — P M K N S H
Two-step breaker with excellent chip evacuation for heavy cutting



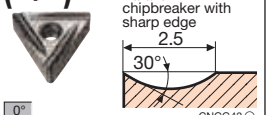
EHF — P M K N S H
Heavy cutting chipbreaker with strong cutting edge for excellent chip evacuation in high-feed cutting



Negative Aluminum Alloy Cutting

Finishing

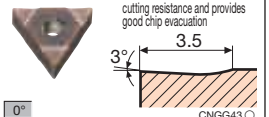
(R/L)AX — P M K N S H
Parallel Al chipbreaker with sharp edge



Negative Hardened Steel Cutting

Finishing

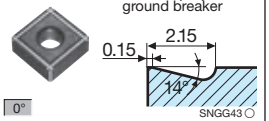
EGH — P M K N S H
Hardened steel breaker reduces cutting resistance and provides good chip evacuation



Negative Chamfering

For Chamfering

C — P M K N S H
General-purpose ground breaker

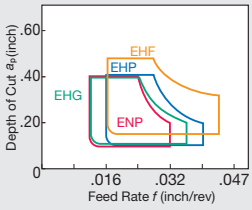


Bumpy Chipbreaker | Standard Chipbreaker | Handed Chipbreaker | Break Master (CBN/PCD) | For Chamfering

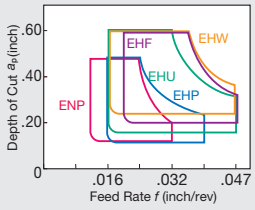
Applicable Part Material: P Steel M Stainless Steel K Cast Iron N Non-Ferrous Metal S Exotic Alloy H Hardened Steel

Chipbreaker Application Range

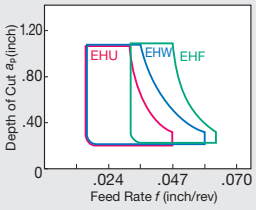
Rough to Heavy Cutting (Inscribed Circle ø.6250 to .7500inch)



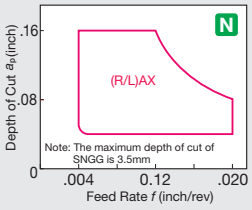
Rough to Heavy Cutting (Inscribed Circle ø1 inch)



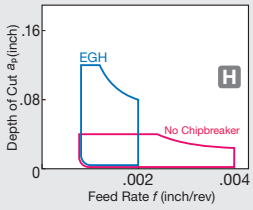
Rough to Heavy Cutting (Inscribed Circle ø1.2205inch)



Aluminum Alloy



Hardened Steel



Indicated chipbreaker application ranges and shapes are representative values only. Actual values may change according to the actual catalog number. For details, refer to "Stock Items" in Chapter B.

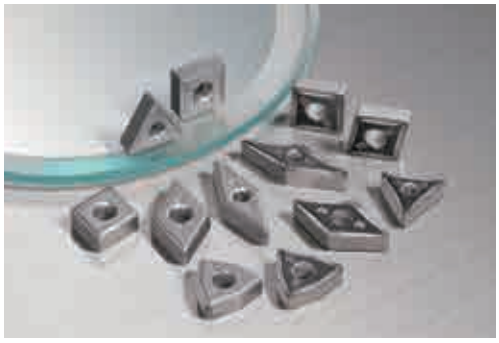
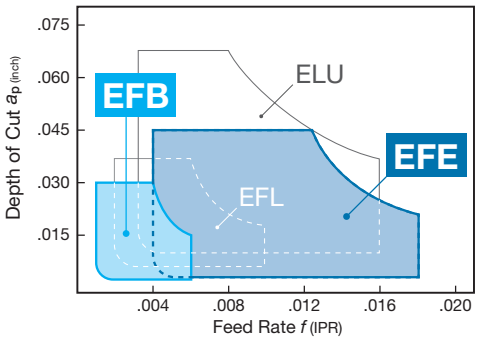
EFB / EFE

P Steel



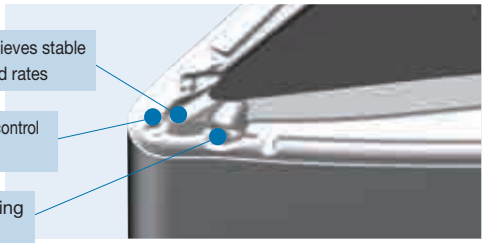
- The EFE main breaker for finishing achieves stable chip control over a wide range of feed rates for low carbon steel and general steel.
- Item range covers a wide variety of machining applications.
- The EFB for low feed finishing increases chip strain and thereby improves chip breaking performance thanks to the variable rake angle in the nose radius.

■ **Application Range**



EFE Breaker for Finishing

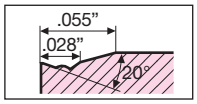
General purpose to high feed cutting



Arc-shaped main breaker design achieves stable chip control over a wide range of feed rates

Two-step breaker achieves stable chip control at low feed rates of f=.0039 IPR

Sub breaker for chip control during profiling



Cross Section of Chipbreaker

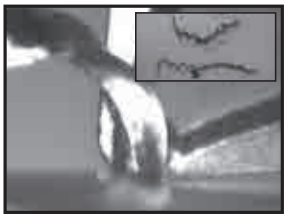
Performance

Chip Control

Part Material: Pipe material (A36) Insert: CNMG432EFE-AC8025P
Cutting Conditions: v_c = 656 SFM, f = .0157 IPR, a_p = .0079" Dry

Excellent chip control at low depth of cut, high feed conditions

EFE Breaker (AC8025P)



Conventional Tool

Application Examples

Part Material: Iron plate (1011 Hot Rolled Steel) Facing Insert: CNMG432EFE-AC8025P
Cutting Conditions: v_c=656 SFM, f=.0059 IPR, a_p=.0079-.0197", Wet

Breaks chips with a steady curl even in facing of rolled steel

EFE Breaker (AC8025P)

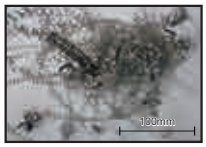
Competitor's Product

Application Examples

Part Material: 1053 Steel ø.785-3.935" External Diameter/Facing Insert: DNMG433EFE-AC8025P
Cutting Conditions: v_c=591 SFM, f=.0098 IPR (Corner), .0177IPR (Straight), a_p=.0118", Wet

Stable chip control even at low depth of cut and variable feed conditions

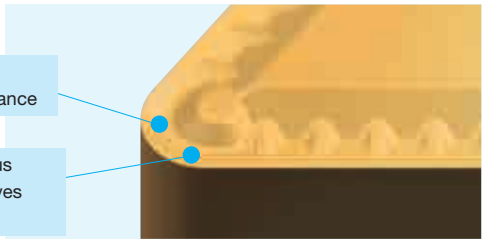
EFE Breaker (AC8025P)



Conventional Tool

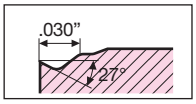
EFB Breaker for Low Feed Finishing

Low feed cutting



Smooth, high rake breaker joint achieves ultra-low cutting resistance

Variable rake angle in nose radius increases chip strain and improves chip breaking performance



Cross Section of Chipbreaker

Application Examples

Part Material: Pipe material (A36) Internal Diameter Machining Insert: DNMG431EFB-T3000Z
Cutting Conditions: v_c=1155sfm, f=.0012-.0079 IPR, a_p=.0276", Wet

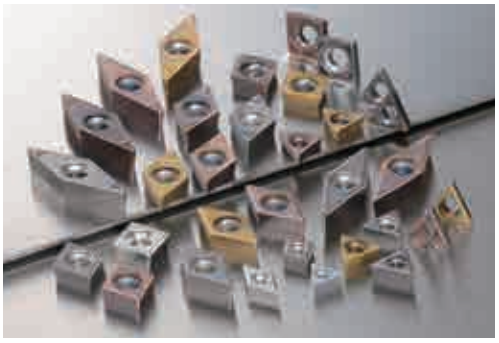
Small curls of chips even for pipe material, achieving a steady chip length

EFB Chipbreaker (T3000Z)

Competitor's Product

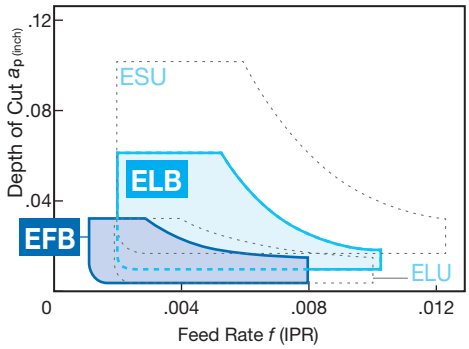
EFB / ELB

P Steel

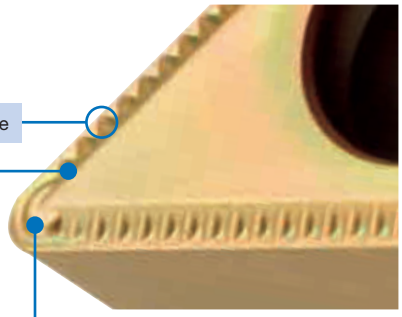


- The EFB for finishing and the ELB for light cutting have been added to the chipbreaker series for low carbon and general steel machining in addition to the existing ELU for finishing and ESU for light cutting.
- The EFB and ELB chipbreakers improve chip control in finishing of low carbon and general steel.

■ Application Range



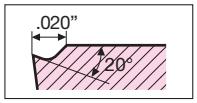
EFB Breaker for Finishing



Ridge reduces edge breakage

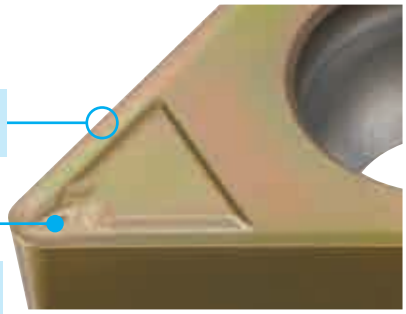
High rake breaker wall improves chip breaking performance

Variable rake angle in nose radius increases chip strain and improves chip breaking performance



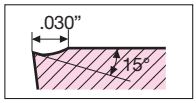
Cross Section of Chipbreaker

ELB Breaker for Light Cutting



Strengthened edge reduces unexpected breakage

Special breaker ridge shape achieves stable chip control



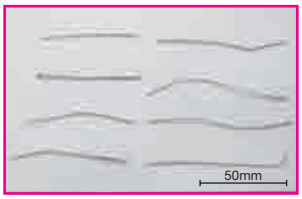
Cross Section of Chipbreaker

Performance

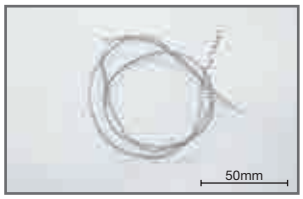
Chip Control

Part Material: Pipe material (A36) ø1.18" Internal Diameter Machining Insert: TPMT221EFB-T1500A
Cutting Conditions: v_c = 328 SFM, f = .0047 IPR, a_p = .0039" Wet

Achieves stable chip control at shallow depths of cut and low feeds



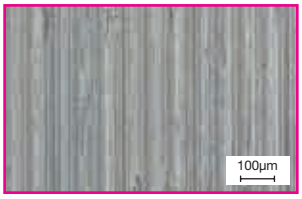
EFB Chipbreaker (T1500A)



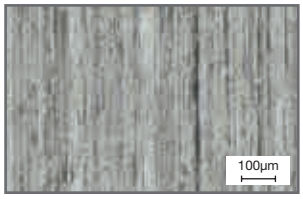
Competitor's Product

Comparison of Surface Roughness of Finished Surfaces

Part Material: Pipe material (A36) ø3.93" Internal Diameter Machining Insert: TPMT221EFB-T1500A
Cutting Conditions: v_c = 656 SFM, f = .0028 IPR, a_p = .0039" Wet



EFB Chipbreaker (T1500A)



Competitor's Product

Performance

Chip Control (1)

Part Material: Pipe material (A36) ø1.18" Internal Diameter Machining Insert: TPMT221ELB-T1500A
Cutting Conditions: v_c = 656 SFM, f = .0059 IPR, a_p = .0197" Wet

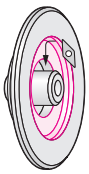
Achieves stable chip control in light cutting

ELB Chipbreaker (T1500A)

Competitor's Product

Chip Control (2)

Part Material: Hub (1045 Steel) Insert: VBMT332ELB-T1500A
Cutting Conditions: v_c=787 SFM, f=0.010 to .011 IPR, a_p=.0236", Wet



ELB Chipbreaker (T1500A)

Competitor's Product

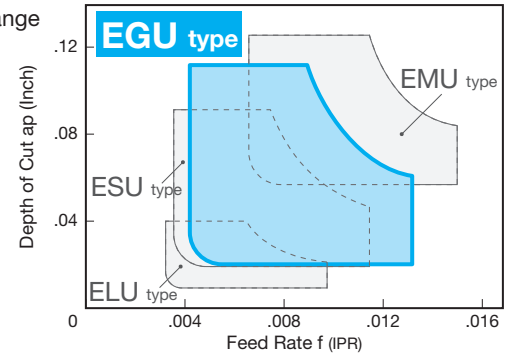
Doubles the tool life by improving chip control and reducing blemishes on machined surfaces

EGU

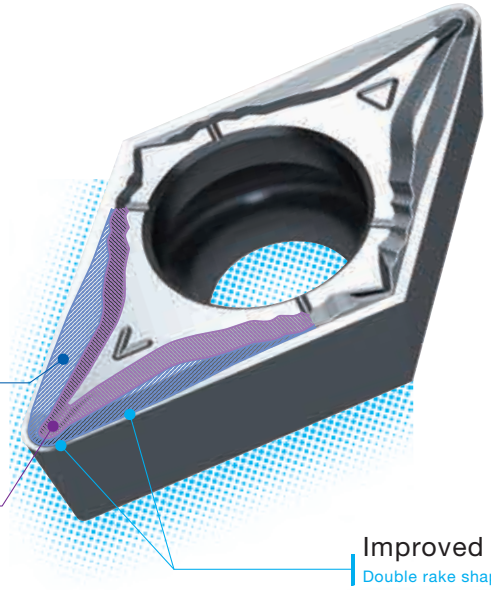
P Steel | M Stainless Steel | S Exotic Alloy

- Superb versatility handles processes from roughing to finishing.
- Stable turning is realised across a range of conditions through excellent cutting edge sharpness and strength.
- Item range covers a wide variety of applications.

■ Application Range



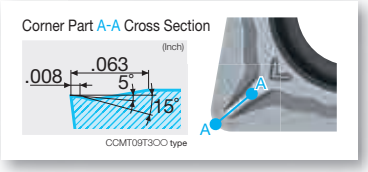
Features

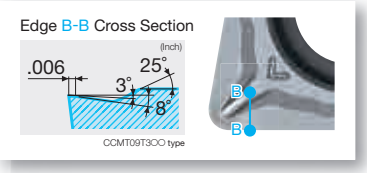


Excellent Chip Control Performance
Wide chip pocket supports various cutting conditions

Low Cutting Force Suppresses Chatter
Protrusion design controls chip flow

Improved Fracture Resistance
Double rake shape with excellent cutting edge sharpness and hardness

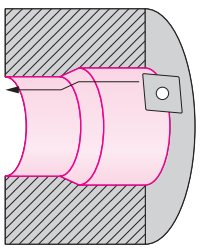


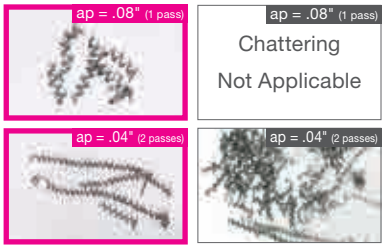


Application Examples

Improves turning efficiency by reducing chip entanglement

Work Material: Automotive Parts (4120H) Internal Tapered Boring
Insert: CPMT322EGU (AC8025P)
Cutting Conditions: vc = 660 SFM, f = .008 IPR, ap = .080", Wet

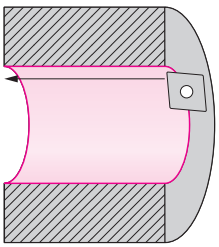




EGU type Chipbreaker (AC8025P) | Conventional Tool

Strong design realizes 1.5x longer tool life

Work Material: Fastening Parts (5015) Internal Boring
Insert: CCMT32.52EGU (AC8025P)
Cutting Conditions: vc = 620 SFM, f = .010 IPR, ap = .040" Wet



EGU type Chipbreaker (AC8025P) | Competitor's Product

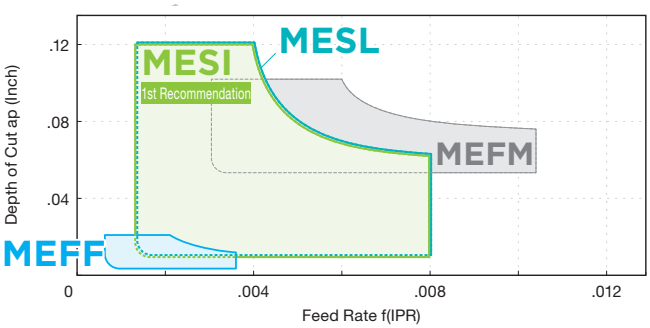
MEFF / MESL / MESI

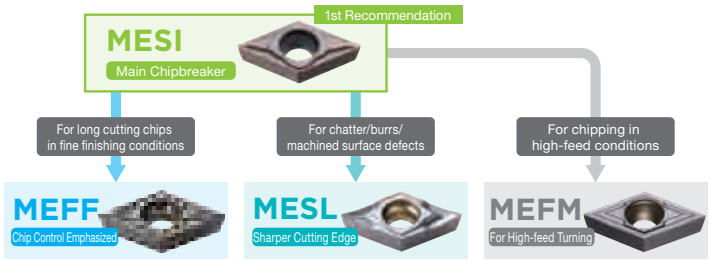
P Steel | M Stainless Steel | S Exotic Alloy

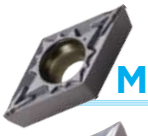
Features

New expanded lineup of chipbreaker series for high-accuracy small product machining of steel, stainless steel, and exotic alloys, supporting various turning needs

- Expanded MESI items, well received for their stable high chip evacuation performance
- MEFF type now available as a series, focusing on reliable chip control in fine cutting
- MESL now available as a series, with excellent cutting edge sharpness in light to medium cutting







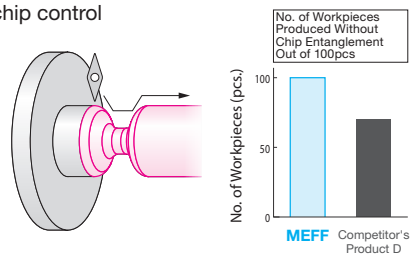
MEFF (New) — Outstanding chip control in fine finishing

MESL (New) — Exhibits excellent cutting edge sharpness over a wide range of cutting conditions. Emphasis on high machined surface quality

Application Examples

Steel for Mechanical Structures Header Part External Turning MEFF P

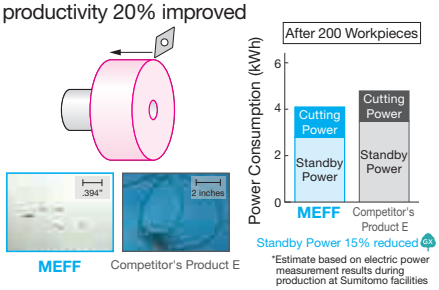
Increased productivity through improved chip control



Tool: VCGT220.5MEFF-AC1030U
Cutting Conditions: vc= 200 SFM, f= .0011 to .0019 IPR, ap= .0039" Wet (Oil-based)

4115 Steel Valve Part External Turning MEFF P

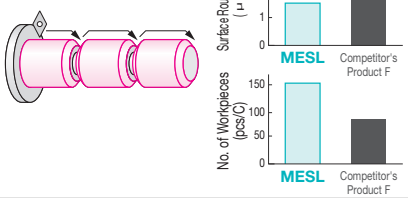
Drastically improved chip control, productivity 20% improved



Tool: DCGT32.50.5MEFF-AC1030U
Cutting Conditions: vc= 265 SFM, f= .0019 IPR, ap= .0029" Wet (Oil-based)

431 Stainless Steel Valve Part External Turning MESL M

Excellent cutting edge sharpness suppresses wear for 1.8 times longer tool life
Machined surface roughness was less than 50% of competitor's



Tool: DCGT21.50.5MESL-AC5025S
Cutting Conditions: vc= 900 SFM, f= .0016 IPR, ap= .0098" Wet (Oil-based)

1045 Steel Sleeve Part Outward Facing MESL P

Excellent, stable machined surface quality

Tool: DCGT32.50.5MESL-AC5025S
Cutting Conditions: vc= 300 SFM, f= .0020 IPR, ap= .0039" Wet (Oil-based)

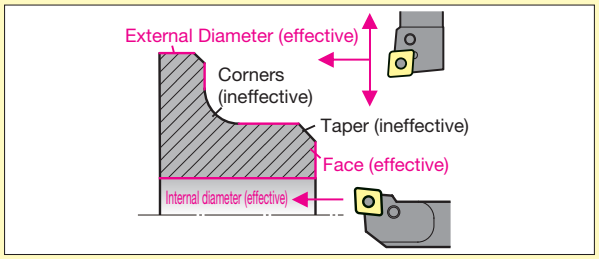
WO: Wiper Insert, 2 cutting edges

Precautions when Using Wiper Inserts

Effects of the wiper insert

Wiper inserts are effective for external/internal diameter machining and for facing as shown in the figure below, surface roughness of the machined surface can be maintained even in high-feed machining.

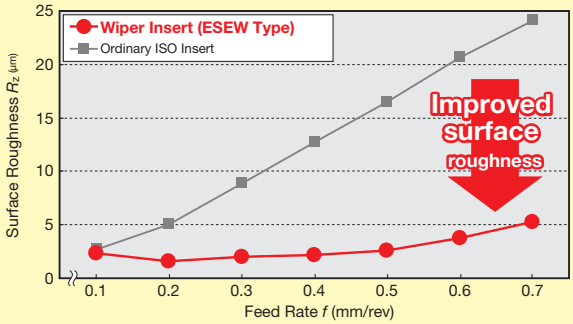
■ Effective Range of Wiper Inserts



* Note that wiper inserts leave the same machined surface roughness as normal inserts at tapers and corners.
* The cutting edge position may need to be offset depending on the insert shape. See the offset table below.

■ Machined Surface Roughness (actual measurements)

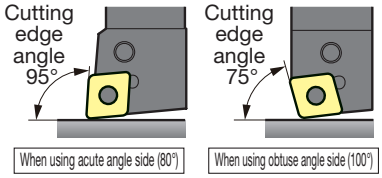
Cutting Conditions: CNMG120408, v_c=200m/min, a_p=1.0mm, SCM435



Coated Carbide / Coated Cermet / Cermet

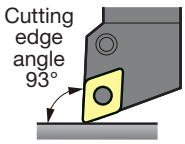
CNMG/WNMG/CCMT/CPMT Type ELUW / EGUW / ESEW Type Chipbreaker (ELUW Type chipbreaker only for CCMT / CPMT)

- Use a holder with a cutting edge angle of 95°.
- No tool compensation required.
  CNMG / WNMG / CCMT / CPMT type wiper inserts comply with the ISO standard, allowing use without correcting the machining program.
- The obtuse (100°) corner on the CNMG type can also provide a wiper effect.



DNMX Type ESEW Type Chipbreaker

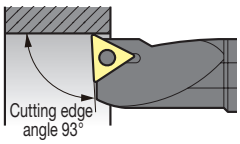
- Use a holder with a cutting edge angle of 93°.
- Tool compensation required.
  DNMX type wiper inserts do not comply with the ISO standard.
  Correct the machining program (tool offset) as explained on the next page (B135).



DNMX Type Tool Program Correction Guide (→ B135)

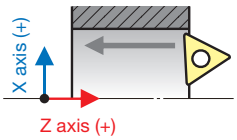
TPGX Type SDW Type Chipbreaker

- Use a boring bar with a 93° cutting edge angle.
- Tool compensation required.
  TPGX type wiper inserts do not comply with the ISO standard.
  Correct the cutting edge position (tool offset) as explained on the right.



Cutting Edge Position Correction for TPGX Type Breaker (SDW)

Internal boring



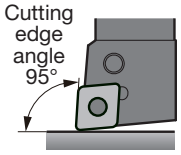
Nose Radius	X direction	Z direction
R0.4	0.12	-0.02
R0.8	0.12	-0.02

Note: Unlike the other profiles, the TPGX type is only effective for boring.

CBN (SUMIBORON / Coated SUMIBORON)

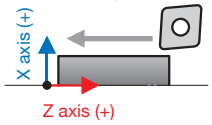
CNGA Type / CCGW Type / WNGA Type WG/WH Type Chipbreaker

- Use a holder with a cutting edge angle of 95°.
- Tool compensation required.
  CNGA, CCGW and WNGA type wiper inserts do not comply with the ISO standard. Correct the cutting edge position (tool offset) as explained on the right.



Cutting Edge Position Correction for CNGA/CCGW/WNGA Type Breaker (WG/WH Type)

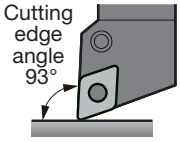
External Turning



Nose Radius	Type	X direction	Z direction
R0.4	WG Type	-0.02	-0.02
	WH Type	-0.06	-0.06
R0.8/R1.2	WG Type	-0.01	-0.01
	WH Type	-0.06	-0.06

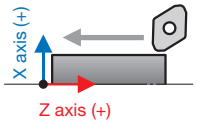
DNGA Type / DCGW Type WG/WH Type Chipbreaker

- Use a holder with a cutting edge angle of 93°.
- Tool compensation required.
  DNGA and DCGW type wiper inserts do not comply with the ISO standard.
  Correct the cutting edge position (tool offset) as explained on the right.



Cutting Edge Position Correction for DNGA/DCGW Type Breaker (WG/WH Type)

External Turning



Nose Radius	Type	X direction	Z direction
R0.4	WG Type	-0.17	-0.01
	WH Type	-0.70	-0.06
R0.8	WG Type	-0.05	0
	WH Type	-0.58	-0.05

Note: Unlike other contour shapes, the DNGA / DCGW Type can only obtain the wiper effect with outer diameter and inner diameter cutting techniques, and cannot be used for edge cutting.

Dimensions in mm

Tool Program Correction Guide for DNMX Type Wiper Inserts (Compensation: mm)

(1) Cutting edge position compensation (tool offset) in X and Z axes

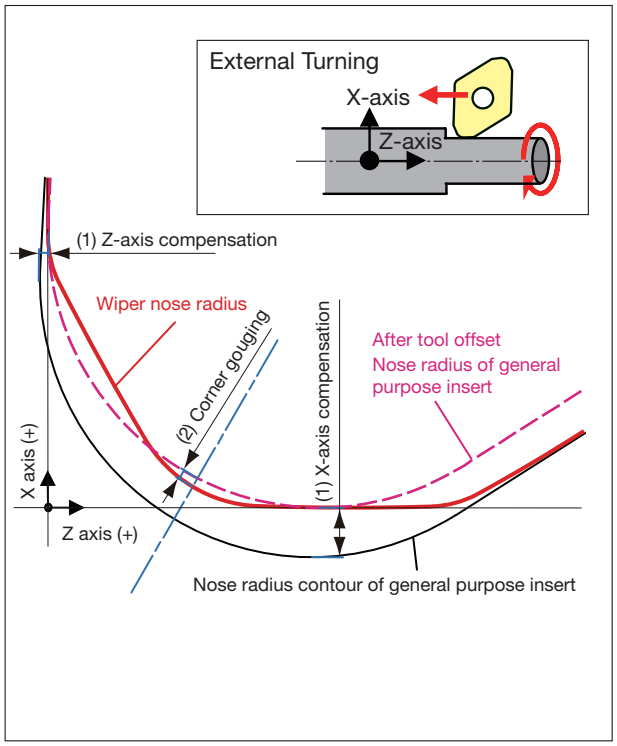
The cutting edge position for this insert differs from standard ISO inserts and therefore requires dimensional correction in the X and Z axes as shown in the table on the right.

*** The X axis compensation is positive for internal boring.**

External Turning

Nose Radius	X direction	Z direction
R0.4	-0.14	-0.02
R0.8	-0.14	-0.02
R1.2	-0.1	-0.03

● Nose Radius Tip Diagram

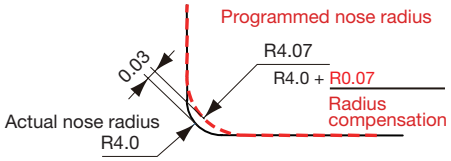


(2) Tool compensation for corners (based on compensation in step (1))

The nose radius must be corrected to prevent the insert from gouging the corner in the programmed tool path.

Programmed nose radius = actual nose radius + radius compensation

Example) To machine an R4.0 corner (using an R0.8 nose)



Nose Radius	Gouging	Radius compensation
R0.4	0.02	+R0.04
R0.8	**0.03**	**+R0.07**
R1.2	0.08	+R0.18

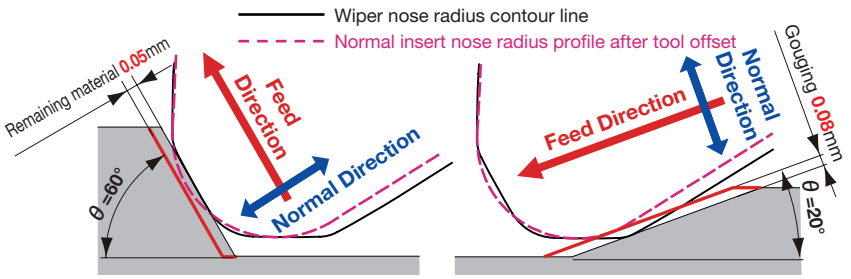
(3) Tool compensation for tapers (based on compensation in step (1))

Tool paths for tapers leave gouging and unmachined surfaces with respect to the programmed tool path. Correct the normal direction as shown below.

Compensation + indicates gouging
Compensation - indicates unmachined surfaces

Nose Radius	Taper Angle (θ)				
	-25°	**-20°**	-15°	-10°	-5°
R0.4	0.08	0.07	0.05	0.04	0.02
R0.8	0.09	**0.08**	0.06	0.05	0.02
R1.2	0.05	0.05	0.05	0.03	0.02

Example) To machine an R0.8 nose and 60°/-20° taper angle (θ)



Nose Radius	Taper Angle (θ)																		
	0°	5°	10°	15°	20°	25°	30°	35°	40°	45°	50°	55°	**60°**	65°	70°	75°	80°	85°	90°
R0.4	0.00	0.00	0.00	-0.01	-0.01	-0.01	-0.02	-0.02	-0.03	-0.03	-0.04	-0.05	-0.05	-0.05	-0.03	-0.02	-0.02	-0.01	0.00
R0.8	0.00	0.01	0.02	0.03	0.03	0.03	0.03	0.02	0.01	0.00	-0.02	-0.03	**-0.05**	-0.04	-0.03	-0.02	-0.01	0.00	0.00
R1.2	0.00	0.02	0.04	0.06	0.07	0.08	0.08	0.07	0.06	0.05	0.03	0.00	-0.03	-0.02	-0.01	0.00	0.01	0.00	0.00

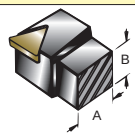
Table 4

(4) Insert Relief Angle	
Symbol	Relief Angle
B	5°
C	7°
D	15°
E	20°
F	25°
N	0°
P	11°

Table 11

(11) Shank Size



Square Shanks
This indicates the A & B dimensions in sixteenths (1/16).

Examples:
12 = 12/16 =3/4 sq.
16 = 16/16 =1.0 sq.
20 = 20/16 =1-1/4 sq.

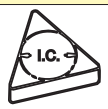
Rectangle Shanks
The first digit indicates the "A" dimension in eighths (1/8).

The second digit indicates the "B" dimension in quarters (1/4).

examples:
86 = A x B
1.0 x 1-1/2
85 = A x B
1.0 x 1-1/4

Table 12

(12) Insert Size



For equal sided inserts this indicates the inscribed circle (I.C.) in eighths (1/8)

Examples,
6 = 6/8 = 3/4" I.C.
4 = 4/8 = 1/2" I.C.
2.5 = 2.5/8 = 5/16 I.C.

For rectangles and parallelograms two digits are necessary.

1st digit = number of eighths (1/8) in width.

2nd digit = number of quarters (1/4) in length.

Table 13

(13) Qualifications

F±.003

A = 4.000 ± .003
B = 4.500 ± .003
C = 5.000 ± .003
D = 6.000 ± .003
E = 7.000 ± .003
J = 3.500 ± .003*
V = 3.500 ± .003*

*Sumitomo standard only

Master Gage Insert Nose Radius Chart for Qualified Holders

Insert I.C.	Nose Radius
1/4, 5/16	.015

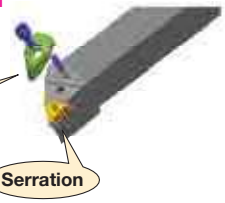
■ Features

- 55° Included Angle with 6 Cutting Edges
  1.5 times more cutting edges compared to DNMG inserts, for greatly reduced machining costs

- Extra-Strong Clamping
  Powerful clamping with double clamp-on lock and serrated insert design

· Prevents the cutting edge position from shifting during profiling
· Reliable even in interrupted machining



● T-REX Insert/Tool Holder Identification

Insert
TRM 55 17 08 -GU
T-REX Insert | Angle | Insert Size | Nose Radius | Name of Chipbreaker

External Holder
DTR 55 C R 2525 -M 17
T-REX Holders | Angle | Cutting Edge Angle | Feed Direction | Shank Size | Shank Length | Insert Size

Note: Cutting Edge Angle
C: 93° (95.5° for major cutting edge)
Q: 105° (107.5° for major cutting edge)

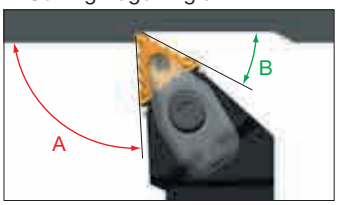
■ Important Notes

● Depth of Cut

Maximum depth of cut should be .098".

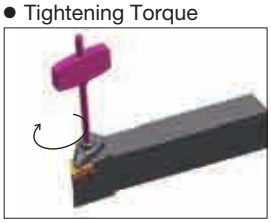
●= USA Stocked Item
★= World Wide Warehouse Item

● Cutting Edge Angle



Holder Cat. No.	A	B	Note
DTR55C	93°	27°	Main blade cutting edge angle is 95.5°
DTR55Q	105°	15°	Main blade cutting edge angle is 107.5°

● Tightening Torque



For the insert clamp, use the included dedicated wrench (TSW040) to tighten at 3.5 to 4.5N·m torque.

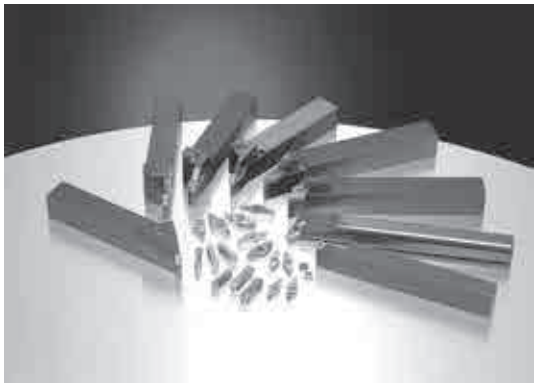
MV / GD Profiling Tool Holders



■ General Features

With a wide range of insert shapes (35° diamond shaped, dogbone and round) available in both cemented carbide and polycrystalline diamond grades for cutting edge, we are able to provide superior performance for a vast variety of applications and cutting conditions.

■ Features and Applications

- With our new range of holders for 35° diamond shaped inserts and AW chipbreakers, we are able to expand our applications to cover roughing to finishing processes.
  AW chipbreakers provide stable roughing with reduced cutting force and increased clamp rigidity due to the new tool holder design
- Wide variety of dogbone inserts
  AW chipbreakers, with their high rake design and newly designed dedicated tool holder, support a wide variety of tooling (straight, 15° angle, 45° angle)
- AW Chipbreaker for smooth chip control
- AG Chipbreaker for no chip adhesion on a mirror finish

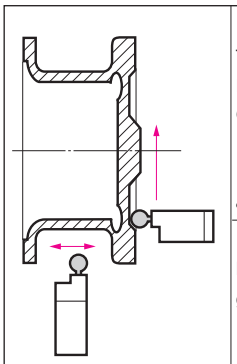
■ Application Examples

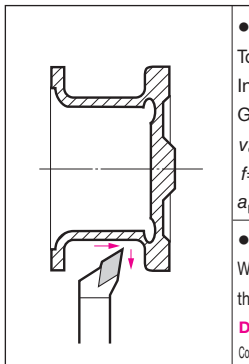


- Cutting Conditions

Tool Holder Cat. No.: GDEL2525-800W
Insert Cat. No.: MDE4R-AW
Grade: H1
n=6560 RPM
f=0.016 to 0.024 IPR
a_p=0.078" Wet

- Usage Results

Excellent chip control of AW breaker guarantees an increase in productivity.



- Cutting Conditions

Tool Holder Cat. No.: SVJCL2525M16
Insert Cat. No.: VCMT160412
Grade: DA1000
v_c=8280 RPM
f=0.014 IPR
a_p=0.008" Wet

- Usage Results

Will not fracture and provides over 17 times the tool life compared to competitors' PCDs.

Small Product Machining

■ General Features

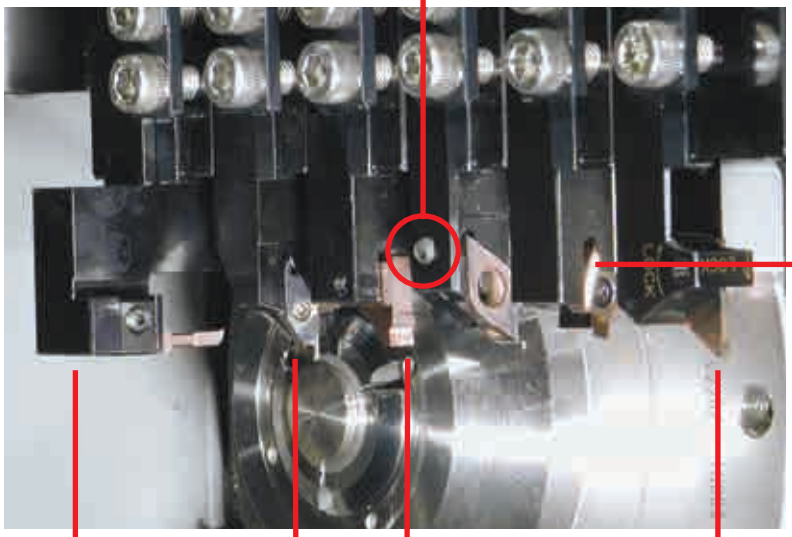
In 1984, Sumitomo Electric Hardmetal first released the MINI Tool Holder series for small product machining in small NC autolathes. Through these years of experience, new tool designs including our side lever lock tool holder were developed to meet various machining requirements such as back turning, profiling and cut-off; we continually strive to enhance the series.

■ From Carbide to PCD : Full Lineup

☞D6

■ PSZ Turn : Modular Quick-Change System

☞D8



■ Special tools for small lathes to cover various types of machining

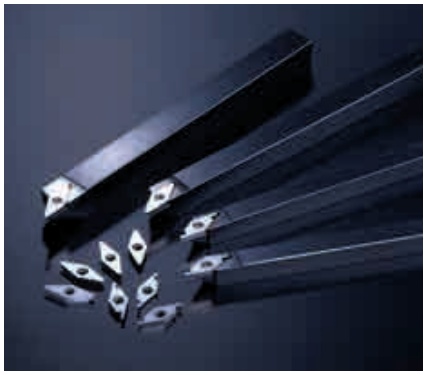
● Very Small Dia. Boring Bar CKB

Min. bore diameter ø .039 to .197" / *1 to ø5mm*

☞E64

● Very Small Diameter Part Turning Tool SPB

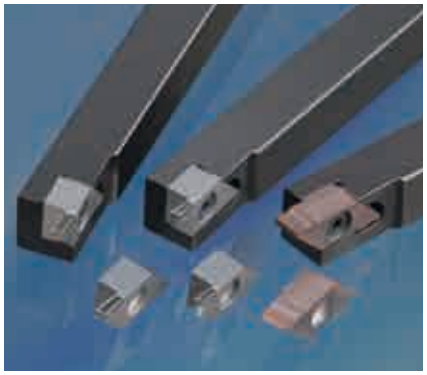
Best suited for very small parts with diameter of less than ø . 394" / *10mm*



☞D14

● Plunging Tool SGW

Ideal for high-efficiency machining of long parts, eliminating chip control issues

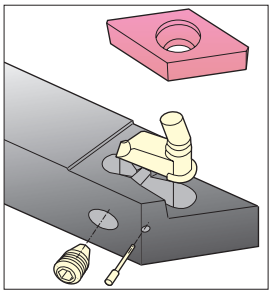


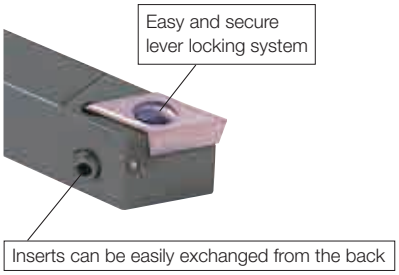
☞D16

Small Product Machining

■ A wide selection of easy-to-use holders

●Back Clamp Tool Holder PC / PD





D27, D29

● Back-Turning Tool Holder SBT / PBT

Sharp cutting with good surface finish
Maximum machining step .315", width of cut .098" / *2.5mm*

D17

● Cut-off Tool SCT

Inserts can be changed easily even from the back, simply by loosening the screw
Maximum cut-off diameters: *ø5mm, ø12mm, ø16mm*

F66

● Zero Offset Holders *Products with part number suffix "-X"

Tool compensation not required for small gang-type lathes

D23

● Twin Head Holder

Multi-functional Autolathe Tool
One holder performing 2 different operations

E10

● Round Shank Holder RS

External turning made possible with holder sleeves

D19

● Grooving Tool SSH

Internal coolant supply enables superb chip control, while the tough carbide body allows stable machining
Supports internal grooving of ø .315" / *8mm* up

F51

● Grooving Tool Holder GND

Lineup includes shanks for small lathes
Suitable for grooving seat sizes *1.25mm* up

F4

Insert Grade Selection

In 1984, Sumitomo Electric Hardmetal first released the MINI Tool Holder series for small product machining in small NC autolathes. A full range of insert grades including AC530U and AC1030U as well as Cermet T1500A, Carbide BL130, SUMIBORON BN2000, and SUMIDIA DA1000 are available to meet a variety of machining requirements.
A high-precision grade, ACZ150, has been added to support a wide range of precision application requirements, from automotive to electronic component machining.

■ Insert Grade Selection

Insert Grades	Application Range			Applicable Work Material					
				P	M	K	N	S	H

Chipbreaker Selection

■ Insert Series

• Insert Precision Selection Guide

	M Class	G Class	E Class
Insert Class			Thickness Tolerance	±0.005"	±0.005"	±0.001
Features	Side surfaces have a sintered finish	Side surfaces are ground	Side surfaces are ground. Thickness tolerances are smaller than G-class inserts
Applications	Roughing to Light Cutting	Finishing to Light Cutting	High-precision to Finishing
Cat. No.	CCMT32.51ELU DCMT21.52ESU	CCGT32.51RFX DCGT32.50.5MESI(*)	CCET32.50.5RFX

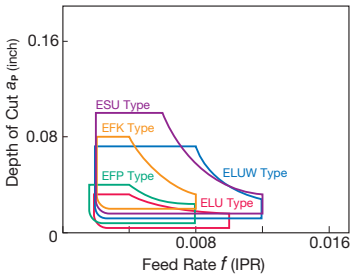
(*) A catalog number with a feed direction symbol prefixed with "M" means that the product has a nose radius with negative tolerance.

• Chipbreaker Selection

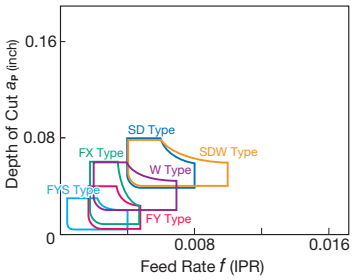
	Finishing to Light Cutting	Features
Parallel	FX 	Best suited for general-purpose O.D. finishing with larger depths of cut.
Wide	FYS FY	Burrs are less likely with undercutting. Chatter is less likely with external and face machining.
Molded	MEFC MESI	3D chipbreaker with good chip control and sharp cutting edge. MEFC is for fine finishing, and the MESI is for varying depths of cut.
	NAG	Breaker for aluminum alloy machining. Sharp edge and low adhesion.

■ Application Range of Chipbreakers for Finishing to Light Cutting

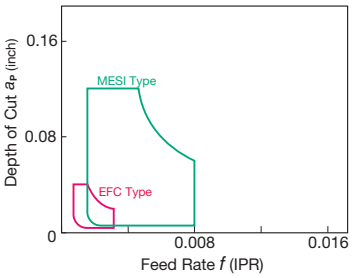
• M Class Finishing to Light Cutting



• G Class Ground Type



• G Class Chipbreaker

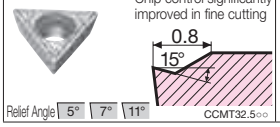


■ Chipbreakers for Finishing to Light Cutting

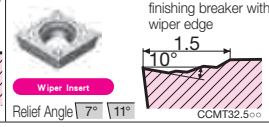
Dimensions (mm)

Positive Type M Class

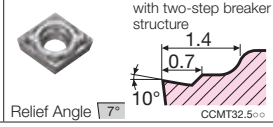
ELU P M K N S
Chip control significantly improved in fine cutting



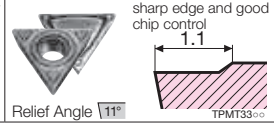
ELUW P M K N S
High-performance finishing breaker with wiper edge



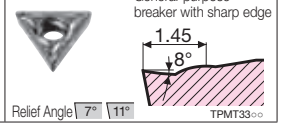
EFP P M K N S
Fine cutting breaker with two-step breaker structure



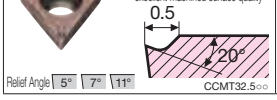
EFK P M K N S
Finishing breaker with sharp edge and good chip control



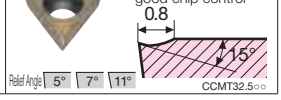
ESU P M K N S
General-purpose breaker with sharp edge



EFB P M K N S
Chipbreaker for finishing of mild steel achieves good chip control and excellent machined surface quality

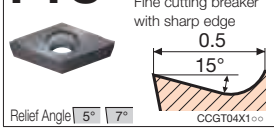


ELB P M K N S
Light-cutting breaker with sharp edge and good chip control

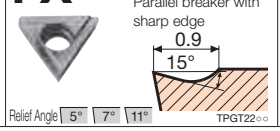


Positive G Class Ground Chipbreaker

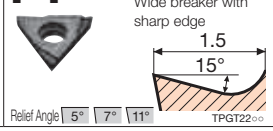
FYS P M K N S
Fine cutting breaker with sharp edge



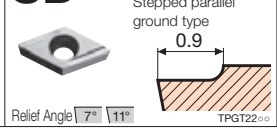
FX P M K N S
Parallel breaker with sharp edge



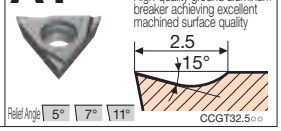
FY P M K N S
Wide breaker with sharp edge



SD P M K N S
Stepped parallel ground type

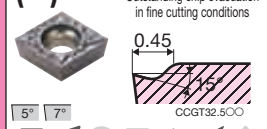


AY P M K N S
High-quality ground aluminum breaker achieving excellent machined surface quality

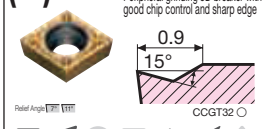


Finishing to Light Cutting

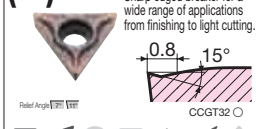
(M)EFF P M K N S H
Outstanding chip evacuation in fine cutting conditions



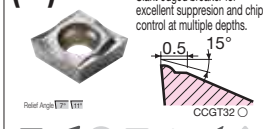
(M)EFC P M K N S H
Peripheral grinding 3D breaker with good chip control and sharp edge



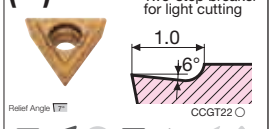
(M)ESI P M K N S H
Sharp edged breaker for a wide range of applications from finishing to light cutting.



(M)ESL P M K N S H
Slant edged breaker for excellent suppresion and chip control at multiple depths.



(M)EFM P M K N S H
Two-step breaker for light cutting



Applicable Part Material: P Steel M Stainless Steel K Cast Iron N Non-Ferrous Metal S Exotic Alloy

PSZ Turn

■ Features and Benefits

- Quick-change system with one clamping screw
- Available square shanks:
  Metric: *12/16/ 20 mm*, Inch: .500” / .625” / .750"
- Cutting head suitable for metric and inch shanks
- Highest level of precision in terms of center height
- Multi-purpose for all sliding head & multi-spindle lathes
- Internal coolant-through holders
- Optimal accessibility when changing inserts
- No loss of stability compare to mono-block tools

* Required separately sold MJIC Connectors to connect to holder or machine

SPB

■ Features

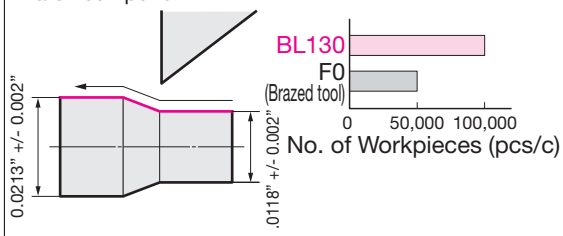
- High rigidity type tools expanded for gang-type NC lathes
- Inserts for various applications can be used on a single holder
- Can also be used on turret-type toolposts
- Uncoated blank inserts are stocked so cutting edges can be ground as required.
- BL130 has wear resistance similar to coated grades and sharpness similar to uncoated grades.
- Ultra-fine grained carbide grade F1, typically used for brazed tools, is now available for indexable inserts

■ Applicable Grades

Insert Grade \ Applicable Part Material	General Steel / SK Material	Stainless Steel: Austenitic	Stainless Steel: Martensitic Ferritic	Brass, Aluminum Alloy
BL130	○	○	◎	○
F1	○	◎	○	○

■ Application Examples

Watch component



Tool: BL130
(PBVFN1102R)
Part Material: 420 Stainless Steel
Cutting Conditions:
vc = 23-36 SFM
f = 0.0002 IPR

Cutting Conditions: v_c = 820 SFM, f = 0.004 IPR, a_p = 0.0197" Wet

■ PCD - SUMIDIA Multi-Function Type with Chipbreaker SUMIDIA Break Master LD

- Provides excellent chip control in traverse cutting and grooving of aluminum alloy.
- Solves chip control problems and dramatically improves work efficiency.
- Achieves long, stable tool life by employing high-toughness grade PCD - SUMIDIA DA1000.

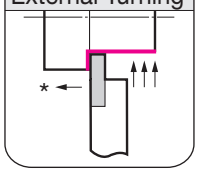

Fig 1

The above dimensions for LF, CDX and LH are the holder dimensions with insert mounted.

Note: Regrinding the PCD - SUMIDIA BreakMaster LD will adversely affect chip control performance.

Recommended Cutting Conditions

Work Material	P Steel M Stainless Steel N Non-Ferrous Metal	N Non-ferrous Metal	
Insert Grade	AC1030U	DA1000	
Machining Details	Grooving	Grooving	Traverse Cutting
Spindle Speed n (min-1)	4,000 to 6,000	4,500 to 8,000	4,500 to 8,000
Feed Rate f (IPR)	0.002 to 0.006	0.0025 to 0.006	0.0025 to 0.006
Coolant	Wet		

Be careful with spindle power during use. For small lathes, insufficient spindle power during machining may cause the machine to stop.
Be careful when machining carbon steel and stainless steel in particular.

■ Features of Round Shank Holders

- Shank diameters from ø5/8" to ø1.00" (*ø14 to ø25 mm)* are in stock.
  Holders can be fitted on various manufacturers' sleeve toolposts.
- Bars can be mounted from the rear of the sleeve toolpost to increase the tooling range.

Boring Bars Identification Table - Inch

Example: A16MCLNR3

A — Boring Bar Type

A — Solid Steel Bar with Coolant Hole

B — Solid Steel Bar with Anti-Vibration Device

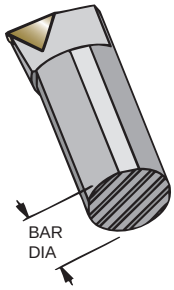
C — Solid Carbide Bar

D — Solid Steel Bar with Anti-Vibration Device and coolant hole

E — Carbide Bar with Fixed Steel Head & Coolant Hole

S — Solid Steel Bar

16 — Boring Bar Diameter



This indicates D dimensions in sixteenths (1/16).

examples:

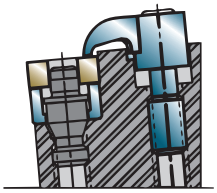
08 = 8/16 = 1/2" Diameter

16 = 16/16 = 1.0" Diameter

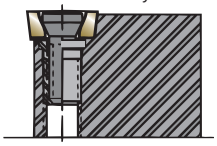
24 = 24/16 = 1-1/2" Diameter

M — Insert Holding

M — Clamp and Lock Pin



S — Screw Lock Only



C — Insert Shape

C — Diamond

D — Diamond

R — Round

S — Square

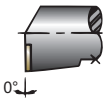
T — Triangle

V — Diamond

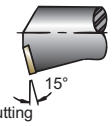
W — Trigon

L — Boring Bar Style

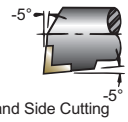
F — 0° End Cutting



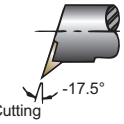
K — 15° End Cutting



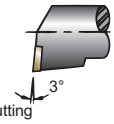
L — -5° End and Side Cutting



Q — -17.5° End Cutting



U — -3° End Cutting



X — -5° Back Facing/Boring

C — Insert Relief Angle

B

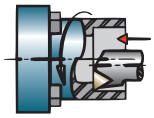
C

N

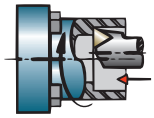
P

R — Hand

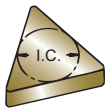
R — Right Hand



L — Left Hand



3 — Insert Size



For equal sided inserts this indicates the inscribed circle (I.C.) in eighths (1/8).

examples,

6 = 6/8 = 3/4" I.C.

4 = 4/8 = 1/2" I.C.

3 = 3/8 = 3/8" I.C.

2.5 = 2.5/8 = 5/16" I.C.

Boring Bars Identification Table - Metric

Oil Hole: With oil hole

: Steel Shank : Carbide Shank : Steel Shank with Anti-Vibration Mechanism

Colored box: Manufacturable size (no oil hole), H: In stock with oil hole

■ General Features

Since its launch in 1976, our industry leading Boring Bar Series with its steel/carbide shank holders and high rigidity heads has since included the popular Small Diameter Boring Bars and now the SumiTurn X-Bars with it's anti-vibration mechanism, optimized insert grades and chipbreakers.

■ Features of Boring Bars

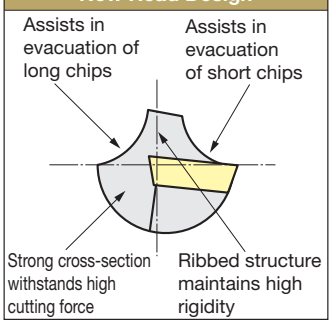
- Applicable to a wide range of applications such as Stop-Boring/Bottom Facing/Through-Boring/Profiling
- Min. machining diameter: ø1mm for CKB Type, ø5mm for C-SCLC
- Anti-vibration boring bar SumiTurn X-Bar
- Carbide short shank type usable on turret lathes without shortening (C16M-STUP, C20M-STUP)
- Wide selection of insert grades and chipbreakers available for various work materials

■ Steel Shank Type with Anti-Vibration Mechanism

SumiTurn X Bar

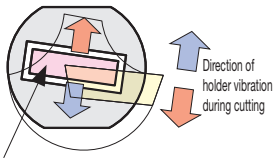
- Higher anti-chatter capability for effective rough boring of deep holes
- Achieves low-cost boring of large diameters and deep holes, with *ø32mm* shank now in stock
- Excellent chip evacuation with double chip pockets
- Bars with internal coolant hole are also in stock
- Negative insert holders (shank dia. ø25 to ø50mm) are now in stock

Excellent Chip Evacuation
New Head Design



ECKS Anti-Vibration Mechanism
Effective Chatter Killer System

X-Bar Construction



Flat impact counter-weight effectively reduces chattering and antiphase.
Stops chattering in its tracks!

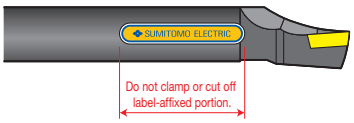
■ Shank Material Selection

SumiTurn X Bar

Application \ Shank Material		Steel	Steel with Anti-Vibration Mechanism	Carbide
General Steel	Shallow Holes (L/D < 3)	⊙		
	Deep Boring (L/D > 3)		⊙	⊙
High efficiency boring with wiper insert			●	⊙
Hardened Steel			—	⊙
High-precision Machining				⊙

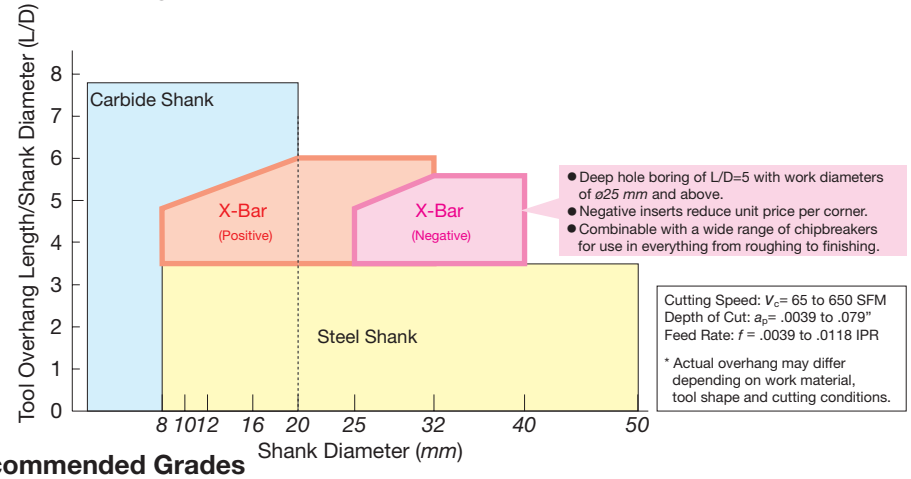
⊙1st Recommendation ● 2nd Recommendation

⚠ Precautions for Clamping Position on Steel Shank with Anti-Vibration Mechanism

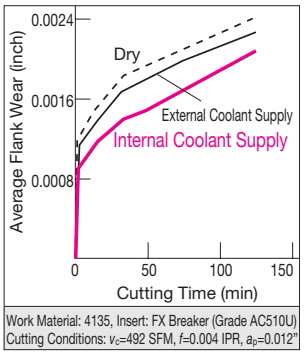


Clamping a shank on the " SUMITOMO ELECTRIC " label-affixed portion may disturb normal functioning (due to built-in Anti-Vibration mechanism).
Therefore, minimum tool overhang length is kept to 3.5D (shank diameter x 3.5). This is a dedicated turning tool. It cannot be used as a rotating tool.

■ Application Range by Shank Type



■ Wear Comparison by Coolant Supply Method



■ Recommended Grades

Twin Head Holder

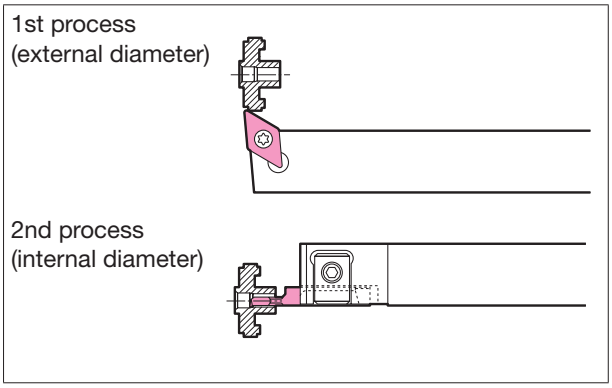
TWIN HEAD

■ Features

- Having one holder that performs two operations is equivalent to mounting an additional tool on the drill sleeve toolpost.
- External turning possible with the aid of a drill sleeve.
- 2 holder configurations, internal + external and internal + internal, are standard stocked items.
- Center height difference of the 2 cutting edges is below 40μm, which is good for high precision machining.

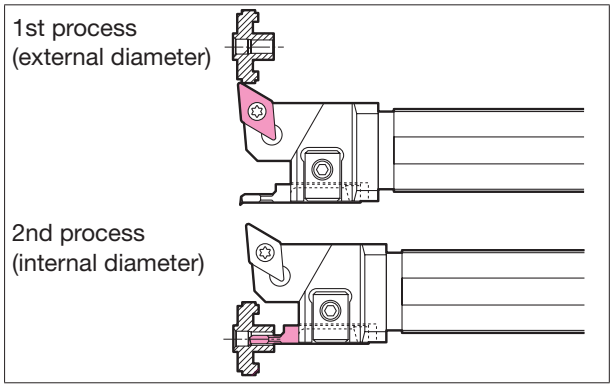
■ Advantages of the Twin Head Holder

• Conventional Tool



· 2 different operations requiring 2 separate tools.

• Twin Head Holder



· A single tool performing 2 different operations.

· Toolpost moving time can also be reduced.

BXBR

■ Features

- Economical two-cornered insert
- Depth of cut 5D (5 times the shank diameter)
- Usable at any desired overhang
- Shank size = min. bore diameter for easy selection (Available from *ø2 mm to ø5 mm in 0.5 mm* increments)
- KBMX Type cutting edge used. Versions with no chipbreaker also available in stock

BSME

■ Features

- Achieves the minimum bore diameter of *ø2.5mm* (ø.098") in boring of hardened steel
- Achieves high-precision cutting edge positioning thanks to the newly developed clamp mechanism
- Expands the range of small hole boring to achieve more high-efficiency machining requiring no grinding
- BSME: Brazed Style
  Can be used with part diameters from *ø2.5 to 5.0mm* (ø.098 to .197")
- SEXC: Indexable Insert
  Can be used with part diameters from *ø4.0 to 6.0mm* (ø.157 to .236")

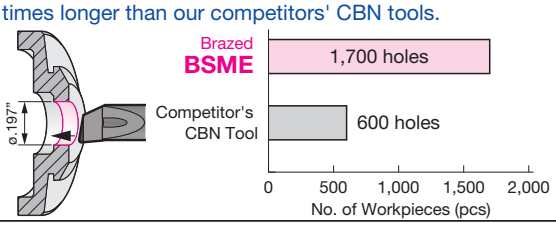
May cause chattering or chipping at the cutting edge during low-speed machining. Excessive depth of cut causes deformation of the tool, which consequently leads to deterioration of dimensional tolerance.

Application Examples

Hardened Alloy Steel Valve Component — BSME

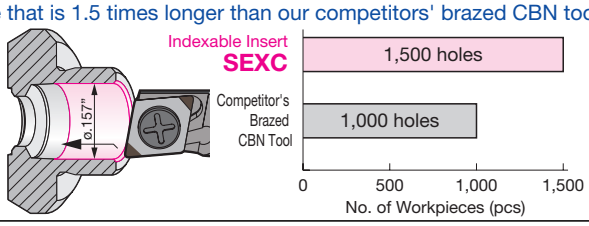
BSME provides stable machining and a tool life that is over 2 times longer than our competitors' CBN tools.



Part Material: Hardened Alloy Steel Valve Component (Automotive Component)
Tool: BSME R50020D2S6 Grade: BN2000
Cutting Conditions: v_c = 387 SFM (7,500 RPM), f = .0008 IPR, a_p = .004" Dry

Bearing Steel: Small Automotive Component — SEXC

SEXC provides drastically reduced tool costs and a tool life that is 1.5 times longer than our competitors' brazed CBN tools.



Part Material: Bearing Steel Small Automotive Component (60HRC)
Holder: E06D2-SEXC R/L03-04P Insert: 2NU-ECXA 030X02LF (BN2000)
Cutting Conditions: v_c = 164 SFM (4,000 RPM), f = .0008 IPR, a_p = .0008" Wet

Smart Dampers for Internal Boring

■ Features

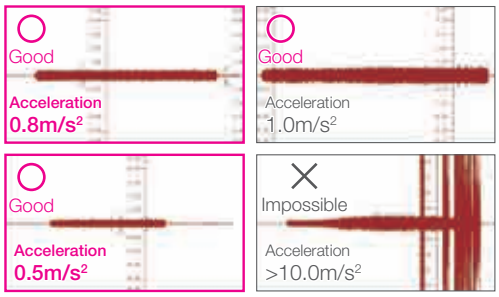
- Adopting a special damper mechanism to suppress chattering for large diameter bars with long overhang of L/D=5 to 8.
- Replaceable heads enable a wide selection of positive and negative inserts.
- Internal coolant supply improves chip evacuation and tool life.

■ Cutting Performance

Overhang Amount 6D Vibration during Machining

v_c = 100m/min

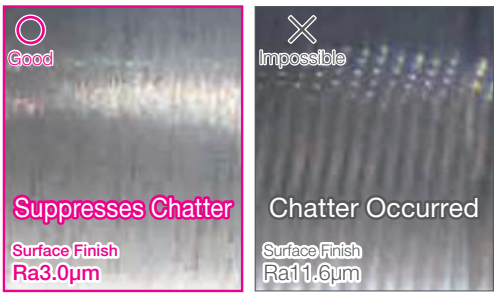
v_c = 200m/min



Smart Damper | Conventional Tool

Overhang Amount 9D* Surface Roughness during Machining

v_c = 100m/min



Smart Damper | Competitor's Product (With Anti-Vibration Mechanism)

Work Material: S45C(Work Dia. ø40 up) Holder: ø32 Shank Insert: TPMT160404N-SU Cutting Conditions: f =0.1mm/rev a_p=0.2mm Dry

*Machining performed with 9D overhang was for anti-vibration performance evaluation only; to prevent tool deflection, use up to a maximum of 8D.

Refer to the user's manual for methods of mounting indexable heads. Indexable heads are not included with the Smart Damper body.
Because an anti-vibration mechanism is built in, clamping to the LF2 dimension may disturb normal functioning.
The indexable head is not included in the weight.
Three clamp bolts and two O-rings (including one spare) are included.

Indexable Heads ☞ E12 to E15

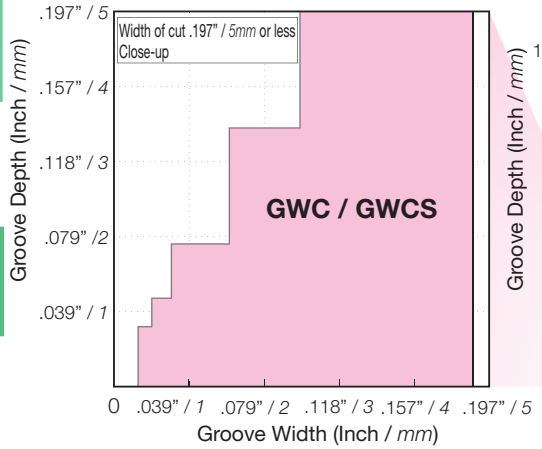
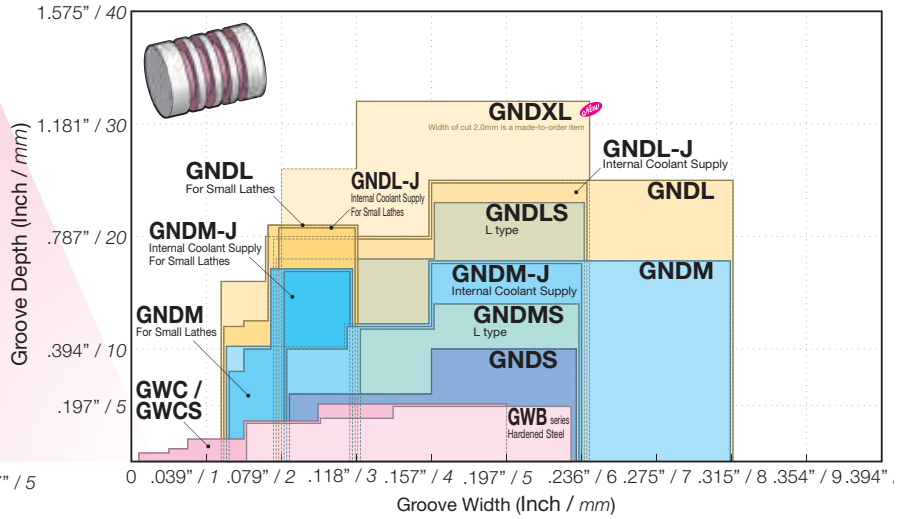
External Grooving





■ External Grooving Tools

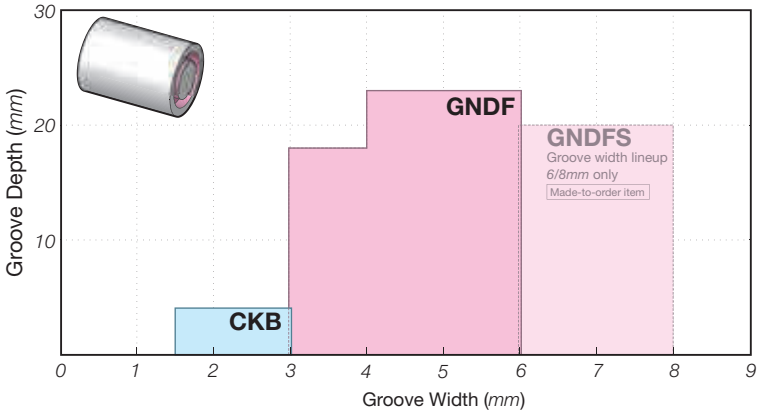
* mark: For groove depths and width combinations, refer to the above figures or the relevant page.

Applications	Series	Shape	Structure: Screw-on	Structure: Clamp-on	Structure: Double Clamp	Insert Shape (indicates no. of cutting edges)	Groove Depth* / Groove Width* (Inch / mm)	Features
For Shallow Grooves	**GWC**	→ F43	●		●	(3) (Standard, with Chipbreaker) Traverse Cutting Possible	.197" / 5.0; .189" / 4.8; .013" / .33	· High rigidity double clamping (Screw-on for Mini Holders) · Triangular type insert with 3 usable corners
For Shallow Grooves	**GWCS**	→ F44			●	(3) (Standard, with Chipbreaker) Traverse Cutting Possible	.197" / 5.0; .189" / 4.8; .013" / .33	· "L-shaped" (side cut) GWC holder
For Shallow Grooves	**GWB**[*1] Hardened Steel	→ F56			●	(1) Traverse Cutting Possible	.197" / 5.0; .236" / 6.0; .059" / 1.5	· High rigidity double clamping · Employs Coated CBN - SUMIBORON for interrupted turning of hardened steel
For Shallow Grooves to General Grooves	**GNDS**	→ F32		●		(2) (2) Traverse Cutting Possible	.394" / 10.0; .079" / 2.0; .236" / 6.0	· High-rigidity design reduces vibration · Enables high-efficiency turning and traversing thanks to its short tool overhang length
For Shallow Grooves to General Grooves	**GNDM** For Small Lathes	→ F23		●		(2) (2) Traverse Cutting Possible	.669" / 17.0; .118" / 3.0; .049" / 1.25	· High-rigidity design reduces vibration · 16x16, 20x12mm square shanks available
For Shallow Grooves to General Grooves	**GNDM-J** Internal Coolant Supply For Small Lathes	→ F24		●		(2) (2) Traverse Cutting Possible	.669" / 17.0; .118" / 3.0; .049" / 1.25	· GNDM with internal coolant supply for small lathes
For Shallow Grooves to General Grooves	**GNDM**	→ F25		●		(2) (2) Traverse Cutting Possible	.708" / 18.0; .315" / 8.0; .049" / 1.25	· High-rigidity design reduces vibration · Perfect for traverse cutting and profiling
For Shallow Grooves to General Grooves	**GNDM-J** Internal Coolant Supply	→ F26		●		(2) (2) Traverse Cutting Possible	1.708" / 8.0; .079" / 2.0; .236" / 6.0	· GNDM with internal coolant supply
For Shallow Grooves to General Grooves	**GNDMS**	→ F26		●		(2) (2) Traverse Cutting Possible	.906" / 23.0; .118" / 3.0; .236" / 6.0	· "L-shaped" (side cut) GNDM
For Deep Grooves	**GNDL** For Small Lathes	→ F23		●		(2) (2)	.827" / 21.0; .118" / 3.0; .049" / 1.25	· High-rigidity design reduces vibration · 10x10, 12x12, 16x16, 20x12mm square shanks available
For Deep Grooves	**GNDL-J** Internal Coolant Supply For Small Lathes	→ F24		●		(2) (2)	.827" / 21.0; .118" / 3.0; .049" / 1.25	· GNDL with internal coolant supply for small lathes
For Deep Grooves	**GNDL**	→ F27		●		(2) (2)	.984" / 25.0; .315" / 8.0; .049" / 1.25	· High-rigidity design reduces vibration · Perfect for grooving, deep grooving and cut-off applications
For Deep Grooves	**GNDL-J** Internal Coolant Supply	→ F28		●		(2) (2)	.984" / 25.0; .079" / 2.0; .236" / 6.0	· GNDL with internal coolant supply
For Deep Grooves	**GNDLS**	→ F28		●		(2) (2)	.984" / 25.0; .079" / 2.0; .236" / 6.0	· "L-shaped" (side cut) GNDL
For Deep Grooves	**GNDXL** NEW	→ F33		●		(1) (1)	1.260" / 32.0; .079" / 2.0[*2]; .236" / 6.0	· Supports a maximum grooving depth of *32mm*.

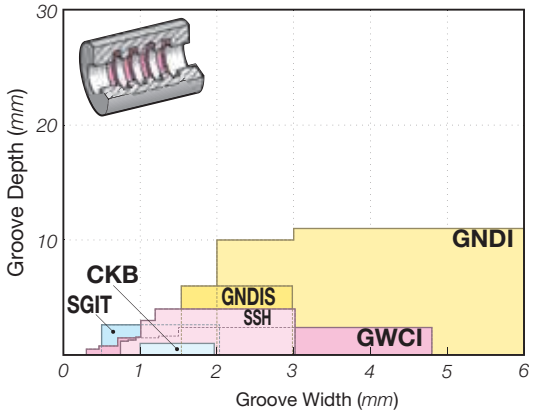
*1: For hardened steel, refer to page F57 for CBN / SUMIBORON Grooving Holder BNGG series. *2: Width of cut *2.0mm* is a made-to-order item.

Selection Guide

Face Grooving



Internal Grooving



■ Face Grooving Tools

Note: * mark: For groove depths and width combinations, refer to the above figures or the relevant page.

Applications	Series	Shape	Structure: Screw-on	Structure: Clamp-on	Structure: Double Clamp	Insert Shape (indicates no. of cutting edges)	Groove Depth* / Groove Width* (Inch/mm)	Machining diameter (Inch/mm)	Features
Very Small Diameter	**CKB**	→ F49		●		(1)	.157" / 4.0; .059" / 1.5; .118" / 3.0	ø.236" ø6 ~	· Face grooving for small lathes
For General Grooves to Deep Grooves	**GNDF**	→ F34		●		(2)	.905" / 23.0; .118" / 3.0; .236" / 6.0	ø1.378 - ø39.370" ø35 - ø1,000	· High-rigidity design reduces vibration
For General Grooves to Deep Grooves	**GNDFS** Made-to-order item	→ F36		●		(2) Traverse Cutting Possible	.787" / 20.0; .236" / 6.0; .315" / 8.0	ø2.756" ø70 ~	· L-shape (horizontal) type · For wide grooves

■ Internal Grooving Tools

* mark: For groove depths and width combinations, refer to the above figures or the relevant page.

Applications	Series	Shape	Structure: Screw-on	Structure: Clamp-on	Structure: Double Clamp	Insert Shape (indicates no. of cutting edges	Groove Depth* / Groove Width* (Inch/mm)	Min. bore diameter (Inch/mm)	Features
For Small Diameter Grooves	**CKB**	→ F50		●		(1)	.039" / 1.0; .039" / 1.0; .079" / 2.0	ø.157" ø4	· Very small diameter grooving · High clamping force · Wide variety of tool holders
For Small Diameter Grooves	**SGIT**	→ F53	●			(3)	.126" / 3.2; .0197" / .5; .079" / 2.0	ø.394" ø10	· 3-cornered type
For Small Diameter Grooves	**SSH**	→ F51	●			(1) Traverse Cutting Possible	.157" / 4.0; .029" / .74; .118" / 3.0	ø.315" ø8	· Internal coolant supply for outstanding chip evacuation · Wide range of grooving widths · Tough carbide body for stable grooving
For Shallow Grooves	**GWCI**	→ F44	●			(3) (Standard, with Chipbreaker)	.098" / 2.5; .013" / .33; .189" / 4.8	ø1.378" ø35	· Using same inserts as GWC series holders · Inserts with chipbreakers now in stock
For General Grooves to Deep Grooves	**GNDIS**	→ F38		●		(2) Traverse Cutting Possible	.260" / 6.6; .059" / 1.5; .118" / 3.0	ø.551" ø14	· Supports grooving with minimum bore diameter from ø14
For General Grooves to Deep Grooves	**GNDI**	→ F37		●		(2) (2) Traverse Cutting Possible	.433" / 11.0; .079" / 2.0; .236" / 6.0	ø1.260" ø32	· High-rigidity design reduces vibration

■ Necking Tools

* mark: For groove depths and width combinations, refer to the above figures or the relevant page.

Applications	Series	Shape	Structure: Screw-on	Structure: Clamp-on	Structure: Double Clamp	Insert Shape (indicates no. of cutting edges	Groove Depth* / Groove Width* (Inch/mm)	Machining diameter (Inch/mm)	Features
Facing Necking	**GNDN**	→ F32		●		(2)	.157" / 4.0; .079" / 2.0; .236" / 6.0	ø.787" ø20 ~	· Necking at corners possible

GND

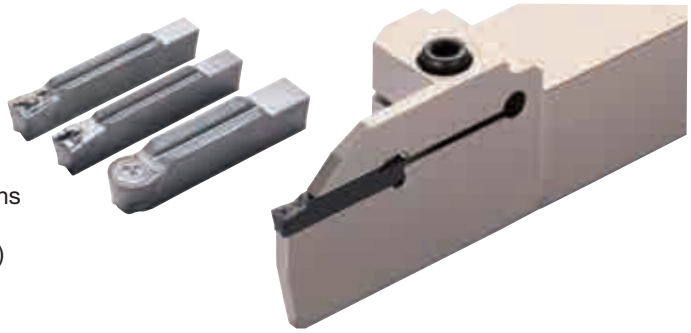
■ Features and Benefits

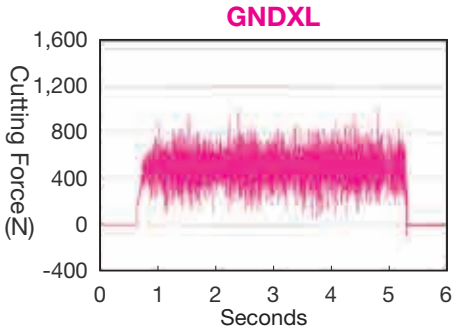
- Wide application range: applicable for grooving, traverse cutting, profiling, necking, facing and internal boring
- Expanded Grade Lineup: featuring grades: AC8025P / AC8035P / AC5015S / AC5025S
- Stable tool life and a large chipbreaker offering prevents sudden breakages due to chip clogging.
- Achieving high efficiency machining with reduced chattering
  The mono-block structure and die steel body reduce vibration during machining around 30% compared to conventional tools
- Higher edge width precision even with unground inserts. High-precision sintering technology achieves cutting edge width precision of *±0.03mm* for seat sizes *1.25mm* to *6.0mm* (front cutting edge angle of 0° or 5°)
- Internal Coolant Supply Holders for Small Lathes Available
- Expanded lineup: *20×12mm* Square Holders for Small Lathes

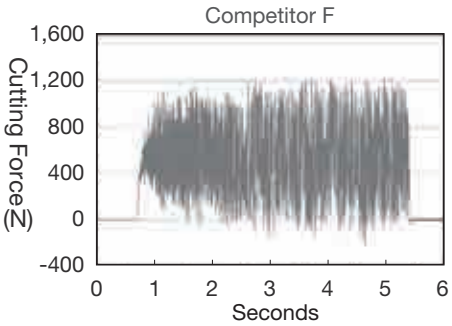
■ GNDXL Deep Grooving (page 33)

New

- GNDXL now available with a deep groove holder that can support groove depths up to 1.260" / *32 mm*
- The integrated high-rigidity body and insert provide strong clamp-on specifications for excellent vibration resistance.
- Lineup of .750" / 1.000" / *20mm* / *25mm* square shank widths
- Applied 1-corner insert for deep grooving.
  Seat Size *3.0 to 6.0mm* is in stock (*2.0mm* is made-to-order)
- Lineup of three chipbreakers: ML / GF / RN





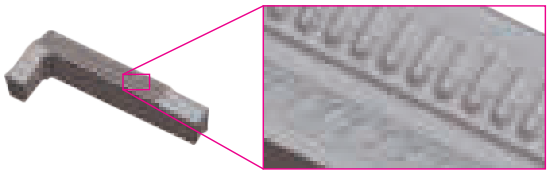


Part Material: 316 Stainless Steel Toolholder: GNDXLR2525M-332 Insert: GCMN3002-GF1-AC530U
Cutting Conditions: v_c= 330 SFM f= .004 IPR a_p= .3937" Wet (External lubrication)

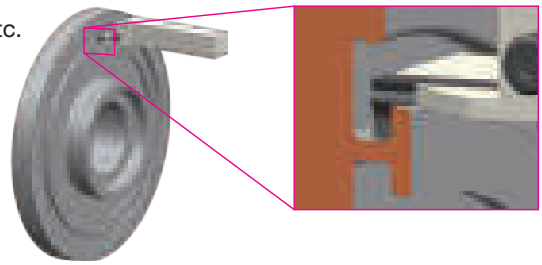
■ GND 90° Insert (Made to Order Item)

New

- Ideal for grooving narrow parts and facing, O/D, and I/D applications that require unique approaches due to interference
- Unique design of the inserts prevent pullout for specific applications
- End shape of the insert is offered in different forms based on application needs: square, full radius, with a chamfer, etc.
- Available in 5mm (.197") or less seat sizes (groove widths)



Firmly clamped with grip effect

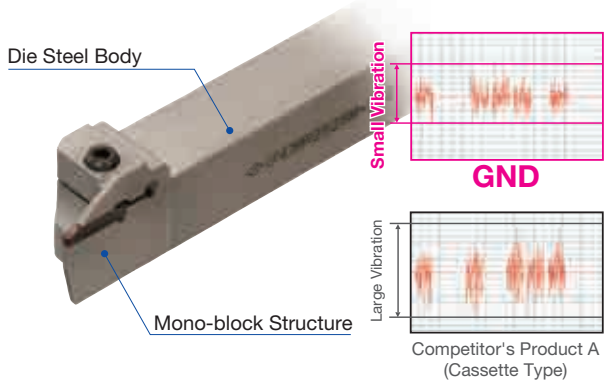


90° Insert Quotation Sheet ☞ F39

■ Grooving Toolholders GND - Cutting Performance

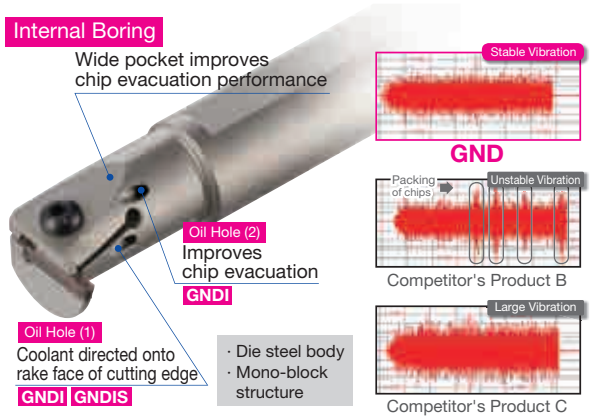
Reduced chattering

High-rigidity design reduces chattering by up to 30% as compared to conventional tools.



Part Material: Structural Steel
Holder: GNDLR2525M-220 **Insert:** GCMN2002-GG
Cutting Conditions: v_C = 330 SFM, f = .0039 IPR, a_p = .79", Wet

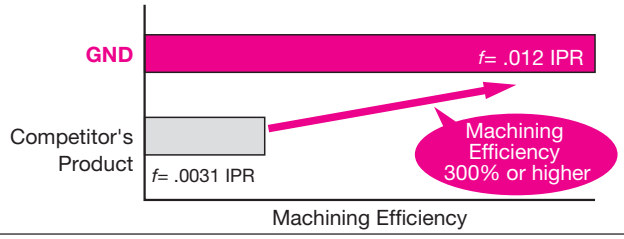
Both high rigidity and good chip evacuation performance



Part Material: Structural Steel
Holder: GNDIR2532-T306 **Insert:** GCMN3002-GG
Cutting Conditions: v_C = 330 SFM, f = .0019 IPR, a_p = .118", Wet

Substantially improved machining efficiency

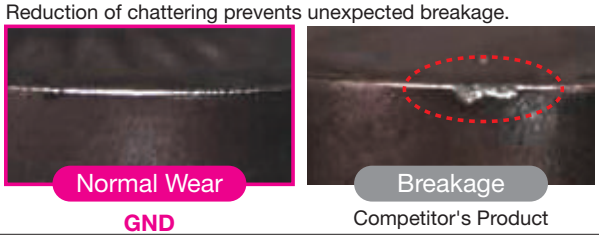
High-rigidity holder enables machining at high feed rates.



Part Material: Cr–Mo Alloy Steel
Holder: GNDLR2525M-320 **Insert:** GCMN3002-GG (AC530U)
Cutting Conditions: v_C=430 SFM, f =0.012 IPR, Wet

Long, stable tool life ensures reliable functionality even on automatic production lines!

Reduction of chattering prevents unexpected breakage.



Part Material: Medium Carbon Steel
Holder: GNDML2525M-618 **Insert:** GCMN6030-RG (AC530U)
Cutting Conditions: v_C=430 SFM, f =0.012 IPR, Wet

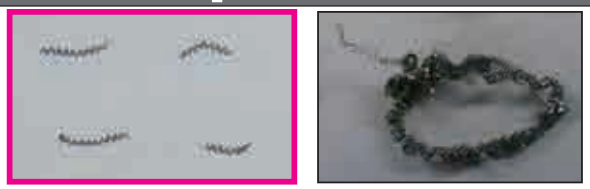
■ Improved Chip Control

Grooving

GND (GG Chipbreaker) | Conventional Tool

Part Material: Structural Steel
Holder: GNDLR2525M-320, Insert: GCMN3002-GG
Cutting Conditions: v_C = 330 SFM, f = 0.0059 IPR, a_p = 0.472", Wet

Traverse cutting



GND (ML Chipbreaker) | Conventional Tool

Part Material: Structural Steel
Holder: GNDMR2525M-312, **Insert:** GCMN3002-ML
Cutting Conditions: v_C = 330 SFM, f = 0.0039 IPR, a_p = 0.0197", Wet

Cut-off

GND (CG Chipbreaker) | Competitor's Product

Part Material: Stainless Steel (*ø30mm*)
Holder: GNDLR2525M-220, **Insert:** GCMR2002-CG-05
Cutting Conditions: v_C = 330 SFM, f = 0.0059 IPR, Wet

Profiling

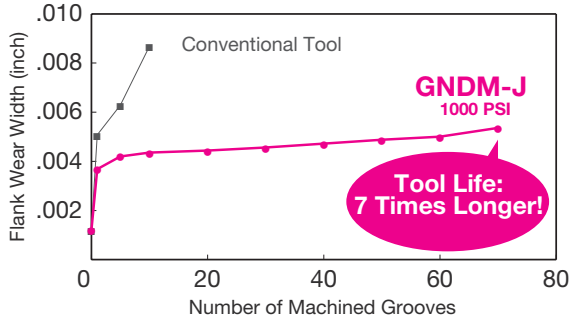
GND (RG Chipbreaker) | Conventional Tool

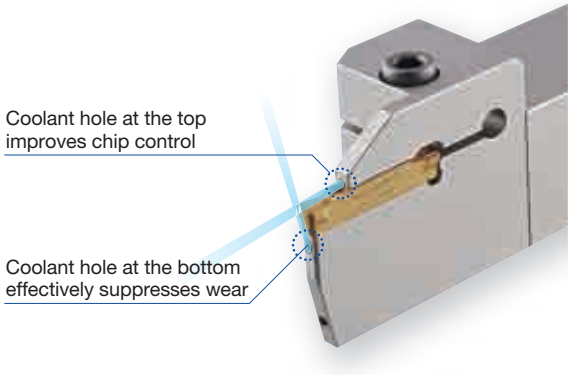
Part Material: Structural Steel
Holder: GNDMR2525M-312, **Insert:** GCMN3015-RG
Cutting Conditions: v_C = 330 SFM, f = 0.0019 IPR, a_p = 0.0039", Wet

■ Internal Coolant Holder GNDM-J / GNDL-J

- Series expansion of Grooving Series GND with internal coolant holders
- Available seat sizes / grooving widths from .079” (2.0mm) to .236” (6.0mm)
- Effective coolant supply to the cutting edge during grooving, achieving both high-efficiency high-speed machining and longer insert tool life
- Improved chip control through direct coolant supply around the cutting edge

- Wear Resistance





- Chip control

Coolant Pressure: 1000 PSI

Coolant Pressure: 145 PSI

External Coolant Supply

Part Material: Titanium Alloy Holder: GNDM R2525K-312J Insert: GCMN3002-GG (AC530U) Cutting Conditions: v_C = 200 SFM, f = 0.0039 IPR, a_p = .197” Wet

■ CF Chipbreakers for Cut-Off Machining

- Chipbreakers with front cutting edge angles 10°/15° for cut-off machining now available
- Asymmetric breaker design demonstrates outstanding chip control even on inserts with front cutting edge angles, where chip control is typically difficult

Right hand insert shown

GCMR20003-CF-10

GCMR20003-CF-15

Competitor's Product

Part Material: Structural Steel Holder: GNDM R2525M-220 Insert: GCMR20003-CF-10,15 (AC1030U) Cutting Conditions: n = 2000 RPM, f = 0.0031” Wet

For face grooving, use cutting conditions closer to the lower limit of the recommended cutting conditions to ensure that chips are long. *Items in grey are not available
In cut-off applications, reduce the feed rate to around 30% to 50% near the center of the workpiece.
As there is less space for chip evacuation when machining internal diameters (particularly small bore diameters), ML/GL/GF chipbreakers are recommended.
Modifications to inserts and holders are required to perform machining such as radius grooving when using the RG chipbreaker with the GNDF holder for facing.

See next page for additional Recommended Cutting Conditions

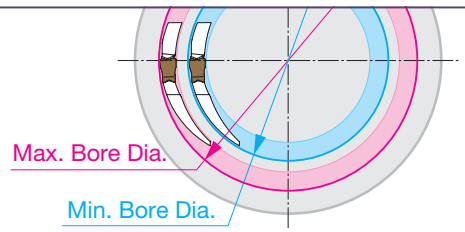
CoCr - Cobalt Chrome	250 - 600	.001 - .006	.002 - .008

■ Key Points for Applications

Key Points for Facing

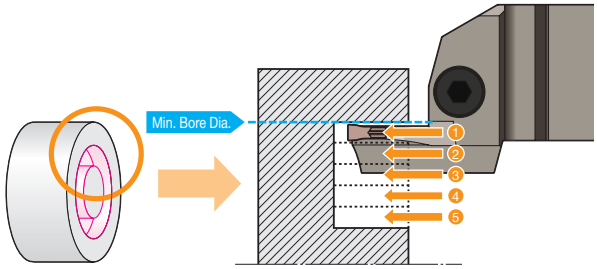
Holder Selection



- Select a holder with which the outer diameter of the first groove to be machined is between the maximum and minimum grooving diameters of the holder.
- If the machining start point is within the effective work diameter range, the work diameter will not be limited for subsequent passes.

Precautions for Groove Expansion

Recommended Chipbreakers MG ML GG GL GF GA



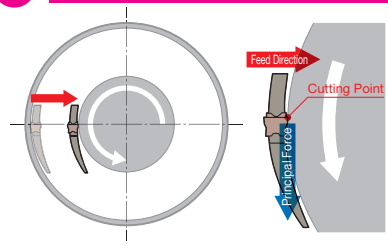
- If the first groove is within the effective work diameter range during groove expansion via plunging, the work diameter will not be limited for subsequent passes.

Precautions for Traverse Cutting

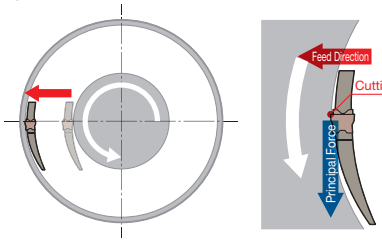
Recommended Chipbreakers MG ML RN

Considering the rigidity of the holder, we recommend machining from the outside to the inside.

○ External → Internal



✕ Internal → External



If machining is performed from the inner to the outer diameter, the wall thickness remaining on the principal force side will become thinner, reducing the rigidity of the holder.

- If the machining start point for traverse face cutting operation is within the effective work diameter range, the work diameter will not be limited for subsequent passes.
- Select the lower limit of the recommended cutting conditions for the chipbreaker and lengthen the chips before evacuation. (In face grooving, broken chips easily get stuck in grooves, which causes problems.)
- When breaking chips, step feed is required.

GND Key Points

Key Points in Internal Boring

Precautions for Internal Boring

Recommended Chipbreakers **ML** **GL** **GF**

If the prepared hole diameter is small, use an ML type or GL type low-feed chipbreaker, both of which reduce chip curl diameter, to ensure adequate chip evacuation.

GCMN3004-MG

GCMN3002-ML

GCMN3002-GG

GCMN3002-GL

Part Material: 15CrMo Steel Prepared Hole Diameter: ø1.000” Holder: GNDIR2532-T306 Insert: GCMN300○-○○
Cutting Conditions: v_C = 330 SFM, f = .0039 IPR, a_p = .118” Wet

Internal Boring

External Turning

GCMN3002-GG

⚠ Chip shapes differ between internal boring and external turning even under the same cutting conditions.

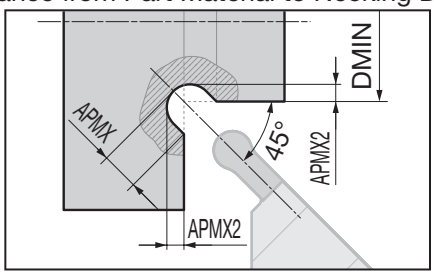
Part Material: 15CrMo Steel
Holder: GNDL R2525M-320, Insert: GCMN3002-GG
Cutting Conditions: v_C = 330 SFM, f = .0039 IPR, a_p = .197” Wet

Key Points for Necking

Precautions for Necking

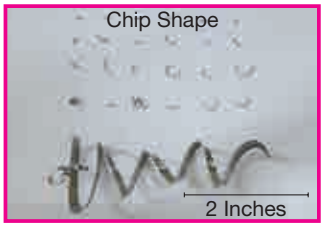
Recommended Chipbreaker **RN**

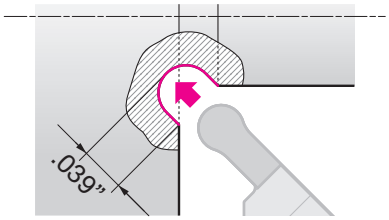
Distance from Part Material to Necking Depth



Seat Size	Necking Depth APMX (Inch)	Distance from Part Material to Necking Depth APMX2 (Inch)
2.0	.059	.025
3.0	.079	.031
4.0	.118	.051
5.0	.138	.057
6.0	.157	.063

- For necking, these conditions are recommended for each seat size when grooving with RN chipbreakers.
- To prevent interference with the part material, the work diameter for each GNDN holder should be set to the minimum machining diameter (DMIN) or less.

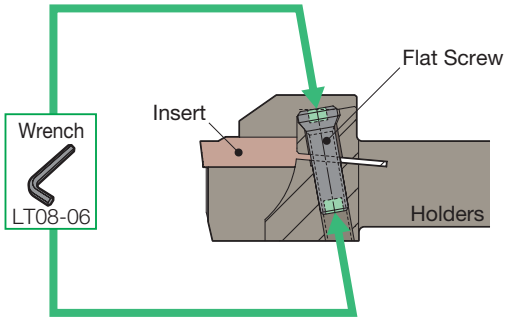




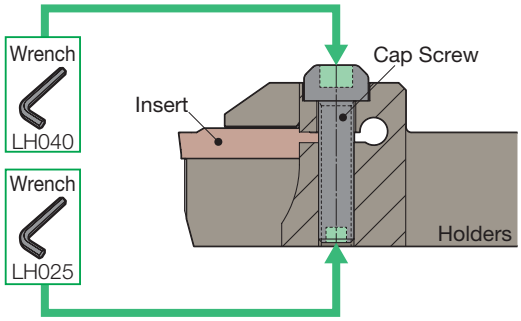
Part Material : 15CrMo Steel
Seat Size : 3.0
Holder : GNDN R2020K-320-020
Insert : GCMN3015-RN
Cutting Conditions : v_c= 330 SFM, f = .0039 IPR
Necking Depth = .039” Wet

Key Points in Internal Coolant Supply Holders For Small Lathes

- *12mm and 16mm* square Internal Coolant Supply Holders for Small Lathes enable insert exchange from both top and bottom.



12mm square holder: **GNDL R/L1212JX-○○○.○J**



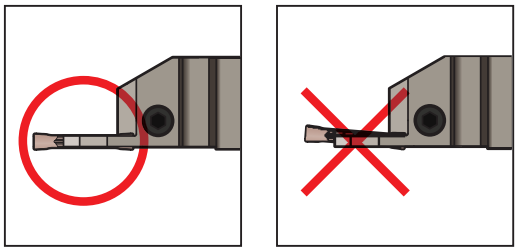
16mm square holder: **GNDM R/L1616JX-○○○J**
GNDL R/L1616JX-○○○J

Precautions for Grooving Tool Holders GND

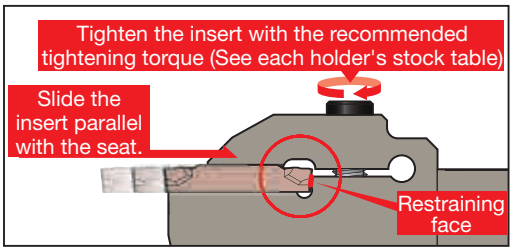
■ Insert Mounting Precautions

(1) Remove any dust, etc. from the insert seat, bolt, and bolt hole before attaching the insert.
(2) If there are scratches or burrs on the insert seat, scrape them away.
(3) Mount the insert by sliding it parallel to the seat.
(4) Clamp the insert with the opposite side (holder side) of the cutting edge secured on the constraining surface.
(5) Tighten the insert with the recommended tightening torque.
If the insert is tightened with excessive torque, it may be damaged, leading to injury.
(6) When changing the insert, adjust the cutting edge offset value.

Mount the insert parallel to the seat



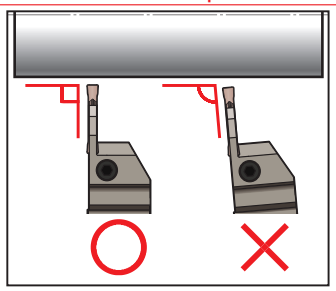
Be sure to push the insert to the end



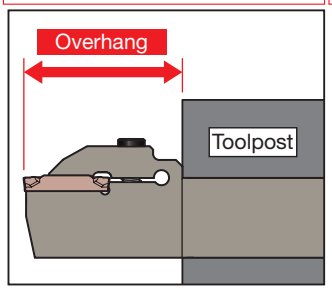
■ Precautions when Mounting Holders

(1) Remove any dust and oil from the toolpost before setting the holder.
(2) If there are scratches or burrs on the toolpost, scrape them away.
(3) Place the holder so that the insert is perpendicular to the workpiece. Failure to do so may bend the machined surface or cause chattering.
(4) The overhang of the holder should be as short as possible.
(5) When grooving or traverse cutting, adjust the center height of the cutting edge to as close to ±0mm as possible. (Within ±0.1mm is recommended.) Incorrect center height adjustment may cause chattering. In cut-off applications, adjust the center height of the cutting edge to a value from 0 to +0.2mm. A lower center height will result in a larger nib at the center.
(6) Set the oil supply nozzle so that coolant can be supplied from the top of the upper clamp unit.

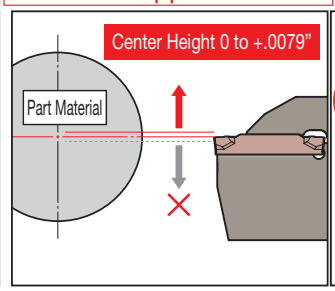
Mount the holder perpendicular to the workpiece.



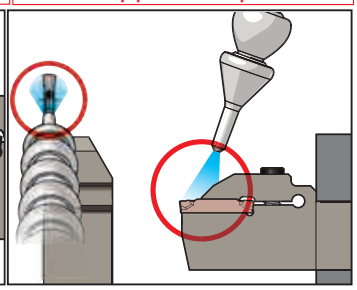
The overhang should be short.



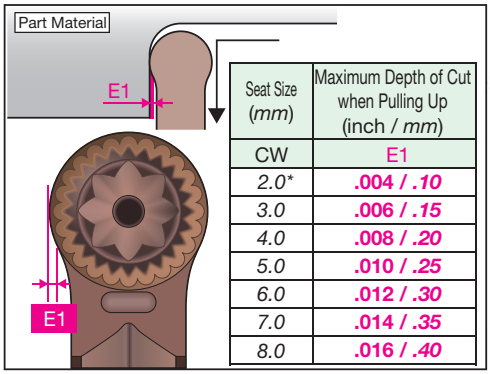
Center height adjustment in cut-off applications



Supply coolant to the top of the upper clamp unit



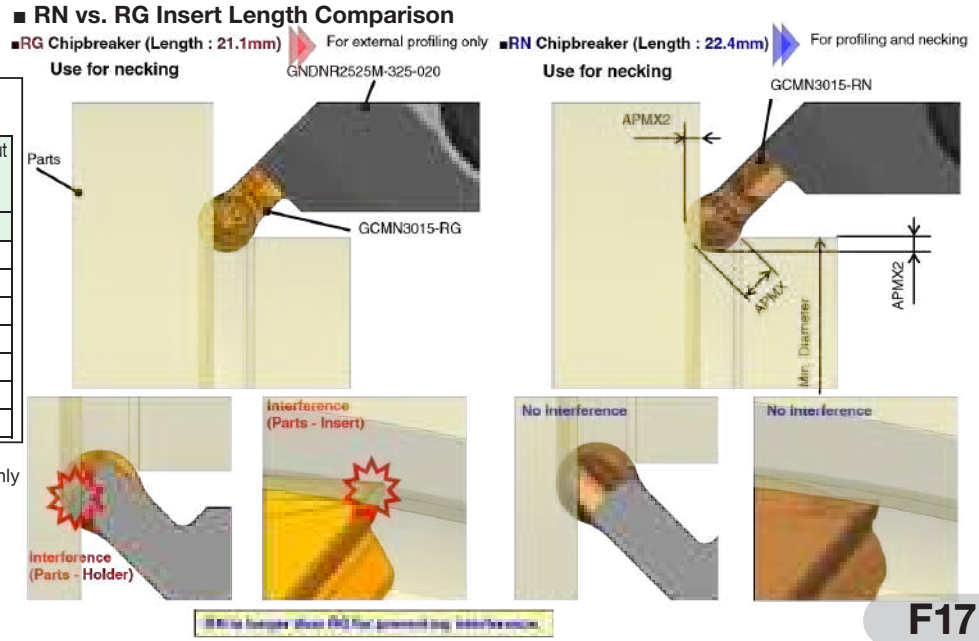
■ D.O.C. when Pulling Up with RG/RN Chipbreakers



Seat Size (mm)	Maximum Depth of Cut when Pulling Up (inch / mm)
CW	E1
2.0*	.004 / .10
3.0	.006 / .15
4.0	.008 / .20
5.0	.010 / .25
6.0	.012 / .30
7.0	.014 / .35
8.0	.016 / .40

*: CW = 2.0 is RN Chipbreakers only

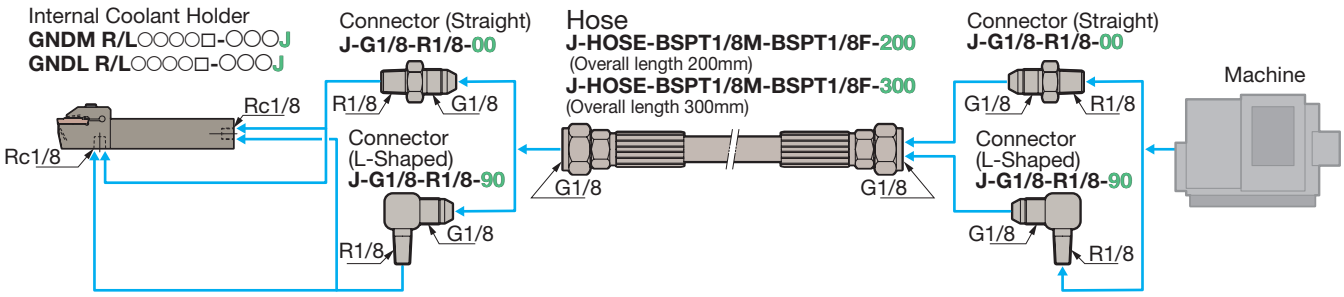
■ RN vs. RG Insert Length Comparison



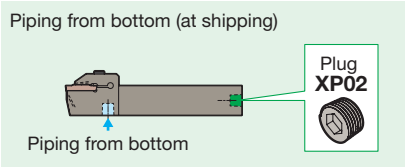
Precautions for Grooving Tool Holders GND

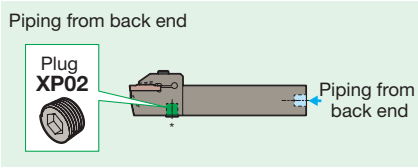
Piping Method for Hoses and Connectors

Hoses and Connectors F29



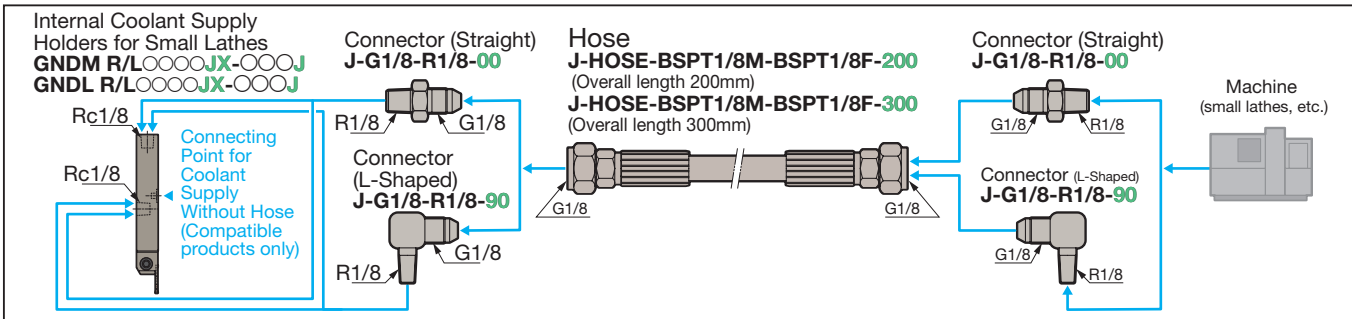
· Apply sealant such as commercial sealing tape to the piping connection parts.
· For plug mounting when piping, see the figure below.



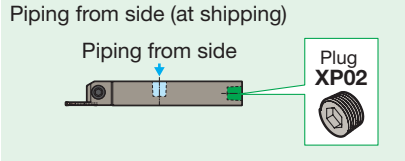


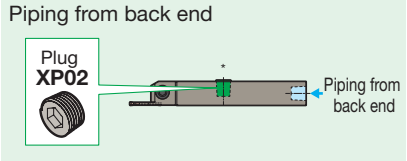
*The plug will protrude a few millimeters when mounted on the bottom.

Piping Method for Hoses and Connectors (For Small Lathes)

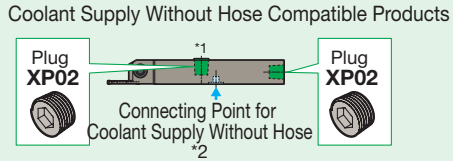


· Apply sealant such as commercial sealing tape to the piping connection parts.
· For plug mounting when piping, see the figure below.





* The plug will protrude a few millimeters when mounted on the side.



*1 The plug will protrude a few millimeters when mounted on the side.
*2 The plug is mounted at shipping, so remove it for use with coolant supply without hose.

Coolant Supply to Holders Without Hose

Coolant can be supplied directly from the toolpost without a hose

Precautionary Notes on Tool Selection

- Select the largest shank size possible.
- It is recommended to mount the holder upside down.
- Select a chipbreaker according to the cutting conditions.
- To ensure adequate chip evacuation, select the smallest corner radius possible unless restrictions apply.
- To ensure rigidity as well, use a multi-function holder so long as the maximum groove depth can be achieved.

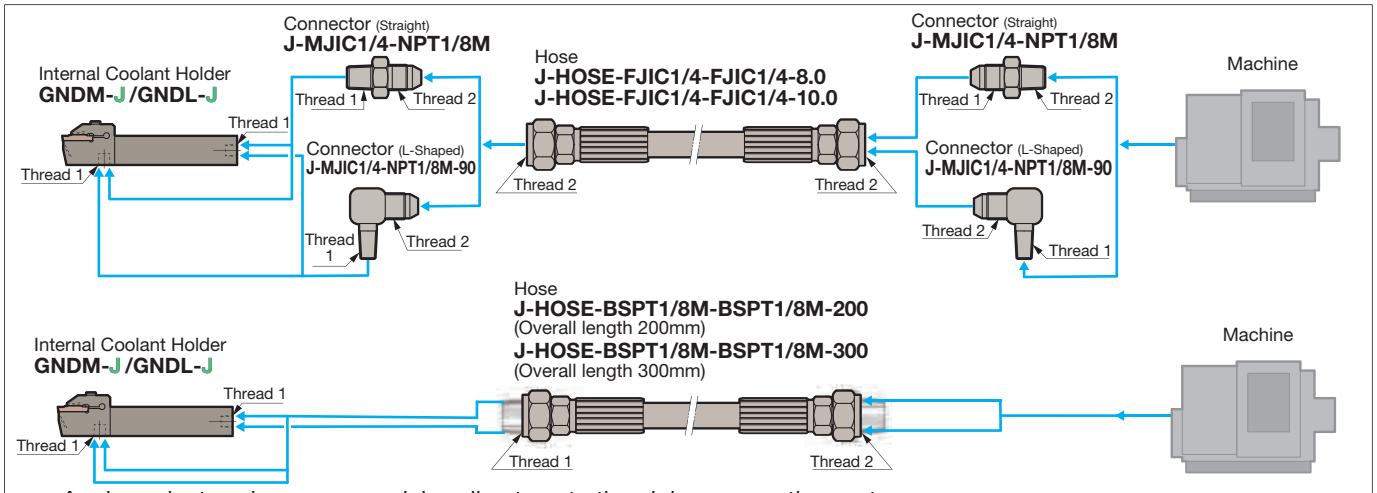
GND-J - Parts and Connection Methods

Piping Method for Hoses and Connectors



- Apply sealant such as commercial sealing tape to the piping connection parts.
- GNDM-J / GNDL-J holders have a plug (XP0_) mounted on the holder back end at shipping. (See Fig. 1)
  When piping from the holder back end, mount a plug (XP0_) on the bottom of the holder for use. (See Fig. 2)

Fig. 1 Piping from bottom (at shipping)

GND - Special Grooving Insert Request Form

Applicable Tool Holders (Seat Size: 2 to 6mm)

External Turning: GNDS, GNDM, GNDMS, GNDL, GNDLS, GNDCM
Internal Boring: GNDI (*GNDIS cannot be used as the insert shape is different)
Facing: GNDF, GNDFS

Special inserts with ground chipbreaker (customized seat sizes / width of cut and insert corner radius) can be made-to-order. To order, fill out the form below (indicate preference by circling the item or specify dimensions), and send it to a Sumitomo Electric Carbide, Inc. Sales Engineer or Authorized Distributor. (Make a copy of this form.) For grooving inserts with shape, width of cut or grade other than those listed below, contact your nearest Sumitomo Electric Carbide, Inc. Sales Engineer.

Your Company / Contact Information (Phone / Fax / Address, etc.)

Shape	Item	Description
	Seat Size CW (*mm*) (*2.00 to 6.59mm*)	
	Corner Radius RER (*mm*)	
	Corner Radius REL (*mm*)	
	Grade (Select from right)*1	AC530U / AC520U / EH520 / H10 / KH03 CBN Grade / PCD Grade - Inquire about other grades
	Grooving Depth CDX (*mm*)*2	

*1 If H10 is selected as the grade, the cutting edge will have a sharp edge.
*2 Set the breaker width based on CDX. The actual groove depth can only be less than or equal to the maximum groove depth configurable by each holder.

Form Instructions

1. The applicable standard holder depends on the seat size. Refer to the chart on the right for manufacturable seat sizes and corner radius range for facing. (If using a corner radius exceeding this for facing, modification is required to prevent the holder from interfering with the work material.)
2. The corner radius maximum value for external turning and internal boring is 1/2 the width of cut.
3. Seat Size (CW) tolerance is ±*0.025mm* when manufactured.
4. WF dimensions for each holder are the CWS value for the applicable holder standard insert seat size as follows.
   (Standard holder dimension WF) + (WF - CWS) / 2
5. For inch widths of cut, inserts can also be supplied partially unground. Contact your local sales engineer for details.

Seat Size CW (Nominal Value)	Applicable Standard Holder	Corner radius (RER, REL) maximum value when used for facing (standard holder applicable)
2.00 to 2.59mm	*2mm Width Holder*	*0.2mm*
2.60 to 3.59mm	*3mm Width Holder*	*0.4mm*
3.60 to 4.59mm	*4mm Width Holder*	*0.8mm*
4.60 to 5.59mm	*5mm Width Holder*	
5.60 to 6.59mm	*6mm Width Holder*	

Quotation Sheet for 90-degree Inserts for Grooving Tool GND Series

When ordering, please fill in the required items (○ mark or dimensions, etc.) in the table below and contact our distributors or distributors. (Please make a copy of this sheet before using.)
For grooving inserts with shapes, edge widths, edge treatments, and insert grades other than those listed below, please contact our nearest sales office (see the end of this manual).

Your Company / Contact Information (Phone / Fax / Address, etc.)

Shape	Item	Contents

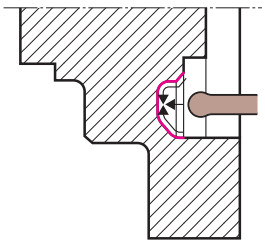
GND - Application Examples

4130H Steel Automotive Component Face Profiling

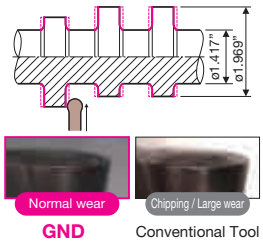


· High rigidity
· Chip evacuation
· Wear resistance

Holder: GNDFR2525M-423-125
Insert: GCMN4020-RN
Seat Size: 4.0
Cutting Conditions
v_C = 660 SFM
f = .0055 IPR, Wet

· Excellent chip evacuation performance
· Stable cutting without chattering or vibration

1050 Steel Camshaft Grooving / Finishing (Continuous to Heavy Interrupted)

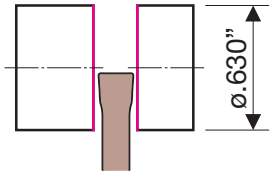


· High rigidity and chatter
· Chip evacuation
· Fracture resistance

Holder: GNDML2525M-618
Insert: GCMN6030-RG
Seat Size: 6.0
Cutting Conditions
v_C = 430 SFM
f = .014 IPR, Wet

· Stable cutting without chattering or vibration
· Excellent fracture resistance and stable chip evacuation

4135 Steel Tempered Hydraulic Component Cut-off

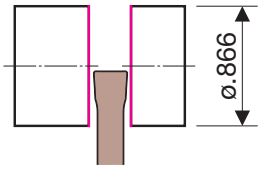


· Chip evacuation
· Wear resistance

Holder: GNDL R2525M-320
Insert: GCMN3002-GG
Seat Size: 3.0
Cutting Conditions
n = 4,000min^{-1}
v_C = 660 SFM
f = .002 IPR, Wet

· Stable chip evacuation
· Excellent wear resistance

1045 Steel Valve Cut-off

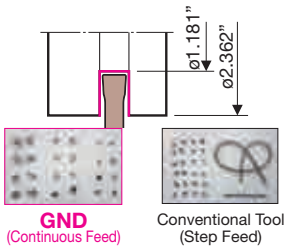


· High rigidity for chatter
· Chip evacuation

Holder: GNDMR2525M-312
Insert: GCMN3002-ML
Seat Size: 3.0
Cutting Conditions
v_C = 500 SFM
f = .002 to .006 IPR, Wet

· Stable cutting without chattering or vibration
· Stable chip evacuation

4140 Steel Office Machine Component Grooving

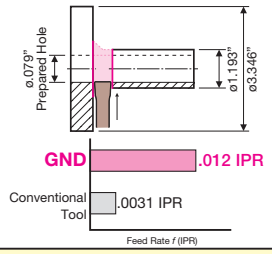


· Chip evacuation
· Machining efficiency

Holder: GNDLR2525M-320
Insert: GCMN3002-GG
Seat Size: 3.0
Cutting Conditions
v_C = 300 SFM
f = .0039 IPR, Wet

· Excellent chip evacuation performance
· 20% greater machining efficiency

4135 Steel Crank Cut-off

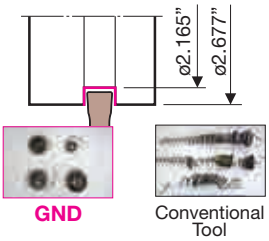


· High rigidity for chatter
· Chip evacuation

Holder: GNDLR2525M-320
Insert: GCMN3002-GG
Seat Size: 3.0
Cutting Conditions
v_C = 375 SFM
f = .012 IPR, Wet

· Improved machining efficiency
· Stable cutting without chattering or vibration

5120 Steel Gearshaft Grooving

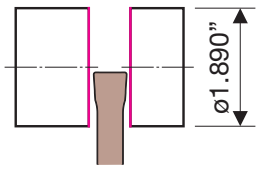


· High rigidity for chatter
· Chip evacuation

Holder: GNDMR2525M-312
Insert: GCMN3004-GG
Seat Size: 3.0
Cutting Conditions
v_C = 330 SFM
f = .0039 IPR, Wet

· Stable cutting without chattering or vibration
· Excellent chip evacuation performance

H13 Steel (45 to 48HRC) Machine Component Cut-off

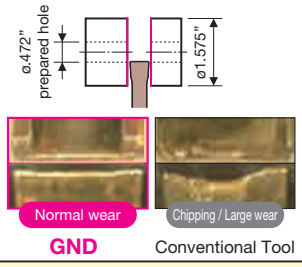


· High rigidity for chatter
· Chip evacuation

Holder: GNDL R2525M-425
Insert: GCMN4002-GG
Seat Size: 4.0
Cutting Conditions
v_C = 165 SFM
f = .0012 IPR, Wet

· Stable cutting without chattering or vibration
· Excellent chip evacuation performance
· Unexpected fractures prevented

1042 Steel Tempered Machine Component Cut-off



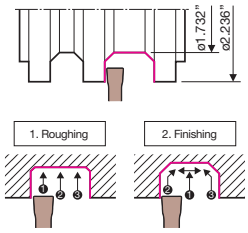
· High rigidity
· Chatter
· Fracture resistance

Holder: GNDL R2525M-320
Insert: GCMN3002-GG
Seat Size: 3.0
Cutting Conditions
n = 1,600min^{-1}
v_C = 660 SFM
f = .002 IPR, Wet

· Stable cutting without chattering or vibration
· Stable fracture resistance

GND - Application Examples

4130 Steel Gearshaft
Grooving / Profiling

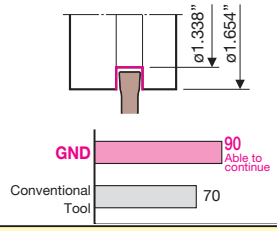


· High rigidity for chatter
· Chip evacuation

Holder: GNDMR2020K-518
Insert: GCMN5008-MG
Seat Size: 5.0
Cutting Conditions
v_C = 500 SFM
f = .0039 IPR, Wet

· Stable cutting without chattering or vibration
· Excellent chip evacuation performance

Sintered Ferrous Material Crank Sprocket Gear
Grooving / Finishing

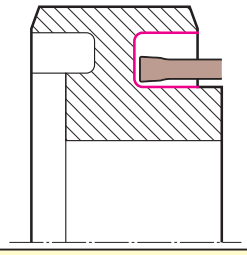


· High rigidity for chatter
· Chip evacuation
· Wear resistance

Holder: GNDLR2525M-220
Insert: GCMN2002-GG
Seat Size: 2.0
Cutting Conditions
v_C = 330 SFM
f = .003 IPR, Wet

· Stable cutting without chattering or vibration
· Excellent chip evacuation performance
· Excellent wear resistance increasing tool life by 130% or more

Sintered Component Clutch Hub Face
Grooving

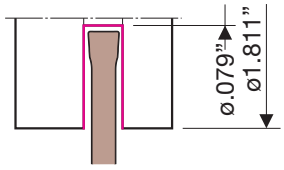


· Machining efficiency
· Chatter

Holder: GNDFR2020K-523-050
Insert: GCMN5008-MG
Seat Size: 5.0
Cutting Conditions
n = 500min^{-1}
v_C = 330 SFM
f = .0019 IPR, Wet

· Reduces cycle time by up to 20%
· Stable cutting without chattering or vibration

304 Stainless Measuring Component
Grooving

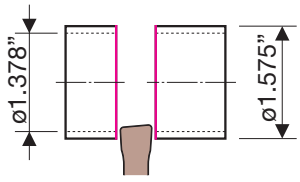


· High rigidity for chatter
· Chip evacuation

Holder: GNDLR2525M-320
Insert: GCMN3002-GG
Seat Size: 3.0
Cutting Conditions
v_C = 195 SFM
f = .001 IPR, Wet

· Stable cutting without chattering or vibration
· Excellent chip evacuation performance

303 Steel Hollow Round Bar Pipe
Cut-off

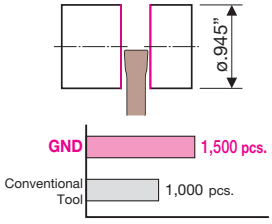


· Machining efficiency
· Chatter

Holder: GNDLR2020K-220
Insert: GCMR2002-CG-05
Seat Size: 2.0
Cutting Conditions
n = 1,000min^{-1}
v_C = 460 SFM
f = .0012 IPR, Wet

· Sharp cutting edge provides stable cutting
· Stable chip control for stable cutting

Stainless Steel Round Bar
Cut-off

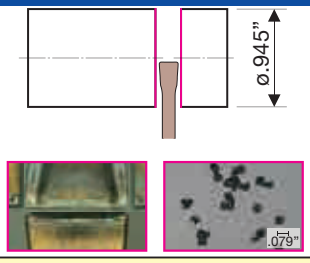


· Tool life
· Adhesion resistance

Holder: GNDML2020K-312
Insert: GCMN3002-GF
Seat Size: 3.0
Cutting Conditions
n = 1,000min^{-1}
f = .0059 → .0012 IPR, Wet

· Suppressed adhesion fracture achieves 150% tool life
· Stable cutting without chattering or vibration

4130 Steel Valve Spool
Cut-off

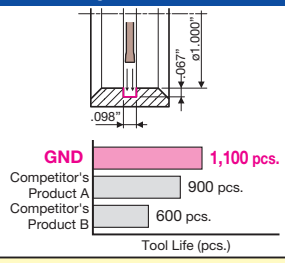


· Tool life
· Chip evacuation

Holder: GNDLR1212JX-1.2512
Insert: GCMN125005-GF
Seat Size: 1.25mm
Cutting Conditions
n = 2,000min^{-1}
f = .0019 IPR, Wet

· Slight damage and able to continue even after 7,500 uses
· Excellent chip evacuation performance

1045 Steel Motorcycle Transmission Component (Collar)
Internal Grooving

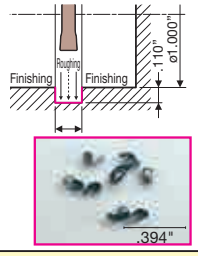


· Tool life
· Chip evacuation

Holder: GNDISR1620-T2046
Insert: GXMN2002S-GF
Seat Size: 2.0
Cutting Conditions
v_C = 500 SFM
f = .0012 IPR
a_p = .067", Wet

· Realizes stable chip evacuation and longer tool life through high-rigidity tools and 3D chipbreaker

4118 Steel Automotive Component (Coupling)
Internal Grooving

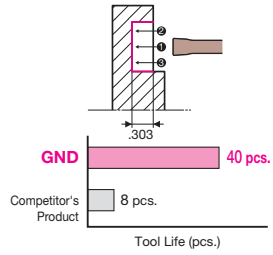


· Machining efficiency
· Chip evacuation

Holder: GNDISR1620-T2046
Insert: GXMN2002S-GF
Seat Size: 2.0
Cutting Conditions
v_C = Roughing 165 to Finishing 265 SFM
f = Roughing .0027 to Finishing .0019 IPR
a_p = .110", Wet

· Good chip evacuation reduces cycle time by eliminating unneeded processes, such as dwelling, which is present in competitor's products.

Stainless Cast Steel Turbine Housing Face
Grooving / Groove Expansion



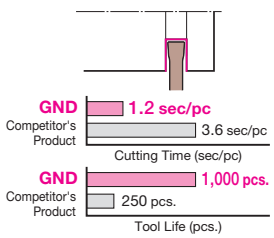
· High rigidity
· Tool life

Holder: GNDSL2525M-410
Insert: GCMN4004-GF
Seat Size: 4.0
Cutting Conditions
v_C = 260 SFM
f = .004 IPR
a_p = up to .303", Dry

· Stable cutting without chattering or vibration
· Excellent wear resistance for 5 times longer tool life

GND - Application Examples

1015 Steel Automotive Component
Grooving

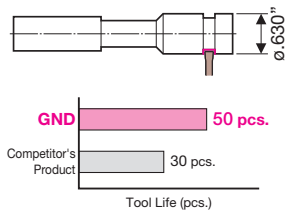


· Machining efficiency
· Tool life

Holder: GNDMR2525K-312J
Insert: GCMN3004-GG
Seat Size: 3.0
Cutting Conditions
v_c = 500 (300) SFM
f = .0039 (.0019) IPR
a_p = .374"
Wet → Internal Coolant Supply 305 PSI
*( ) competitors running parameters

· Double the feed rate of competitor tools, with no chatter
· 1.5 times the cutting speed thanks to an internal coolant holder, achieving 4 times longer tool life

Sintered Component Tap Component
Grooving

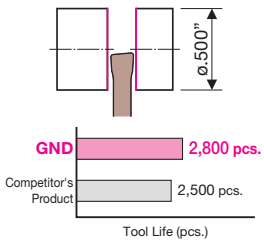


· Tool life
· Chip evacuation

Holder: GNDLL2020K-220J
Insert: GCMN2002-GF
Seat Size: 2.0
Cutting Conditions
v_c = 300 SFM
f = .0008 IPR
a_p = .079"
Wet → Internal Coolant Supply 218 PSI

· Coolant supply from near the cutting edge directly to the cutting point, achieves 1.7 times longer tool life
· Internal coolant supply realizes stable chip evacuation even at low feed machining

4804 Steel Free-cutting Steel Machine Component
Cut-off

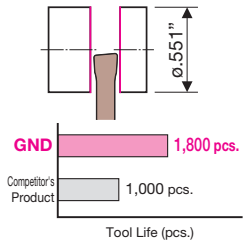


· Tool life
· Central burrs

Holder: GNDLR1212JX-212.5
Insert: GCMR20003-CF-10
Seat Size: 2.0
Cutting Conditions
v_c = 400 SFM
f = .0019 IPR
a_p = .250", Wet

· Excellent cutting edge sharpness for 1.12 times longer tool life
· Central burrs eliminated with handed insert

4135 Steel Machine Component
Cut-off

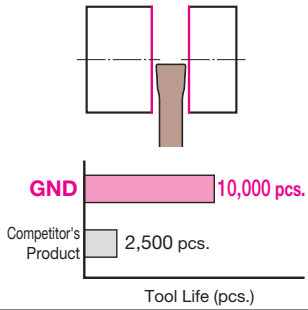


· Machined surface
· Tool life

Holder: GNDMR2020K-210
Insert: GCMR20003-CF-15
Seat Size: 2.0
Cutting Conditions
n = 2,500min^{-1}
f = .0016 IPR
Wet

· Excellent chip control improves machined surface
· Outstanding cutting edge sharpness for 1.8 times longer tool life

Pure Iron Automotive Component
Cut-off

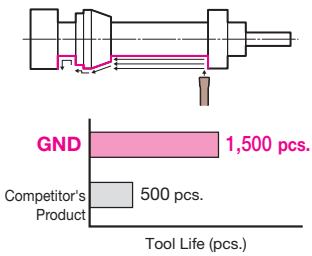


· Machining efficiency
· Tool life

Holder: GNDMR616JX-216J (Special Type)
Insert: GCMN2002-GF
Seat Size: 2.0
Cutting Conditions
v_c = up to 475 SFM
f = .0023 IPR
a_p = .197"
Wet → Internal Coolant Supply (Normal Pressure)

· Effective cutting edge cooling via internal coolant supply, achieving 4 times longer tool life
· Tool change reduced, enabling longer automatic operation
· Improved productivity through change to high- speed conditions

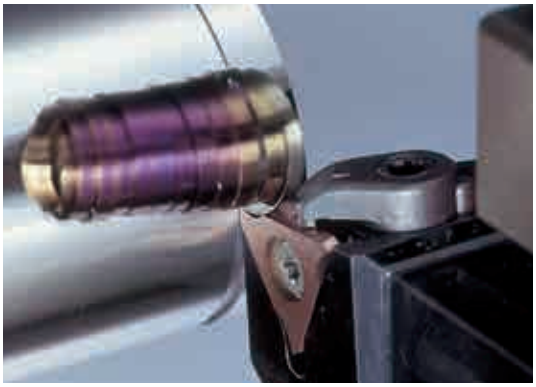
1045 Steel Equivalent Automotive Component
Grooving / Traverse Cutting



· Machined surface
· Tool life

Holder: GNDMR2020K-418J
Insert: GCMN4004-ML
Seat Size: 4.0
Cutting Conditions
n = 2,500min^{-1}
f = 0.0039 IPR
a_p = .019" to .079"
Wet → Internal Coolant Supply (Normal Pressure)

· Effective cutting edge cooling via internal coolant supply, achieving 3 times longer tool life
· Cutting edge sharpness maintained for significantly improved post-machining tearing as well



Features of GWC Series for Shallow Groove

- The same insert can be used for both external and internal grooving
- Full range of insert grades to cover a wide range of work materials
  Coated Carbide AC530U, Carbide H1, Coated Cermet T3000Z, Cermet T1500A, CBN BN2000, and PCD DA2200 are now in stock.
- A wide variety of grooving widths from (.060 - .090" & 0.33mm to 4.8mm
- SumiTurn B-Groove inserts with chipbreaker are now in stock
- Customers can modify the width of cut, nose radius and rake angle according to their own requirements with the blank inserts in stock.
  Customized edge shapes can be made-to-order.
  (Sumitomo Electric Carbide, Inc. also accepts such orders)

● Ordering TGA Type Special Inserts

Use the "Special Grooving Insert Request Form" when ordering special inserts (with different shapes, widths of cut, and cutting edge lengths).

Make a copy of the form, fill it out and send it to a Sumitomo Electric Carbide, Inc. Sales Representative or distributor.

■ TGA PSC

Characteristics of GWC PSC Series

- Similar insert can be use for both external and internal grooving
- Full range of insert grades to cover a wide range of work materials available:

Coated Carbide: AC530U
Uncoated Carbide: H1
Coated Cermet: T3000Z
Cermet :T1500A/T1200A
SUMIBORON: BN2000/BN250
SUMIDIA: DA2200

- A wide variation of grooving widths from 1.5mm to 4.8mm

SumiTurn B-Groove

■ General Features

SumiTurn B-Groove (BF Type) inserts with chipbreaker have been added to the TGA Type grooving insert lineup to solve chip control problems.

■ Features

- Achieves good chip control in a wide range of grooving processes
- Good chip control during final wide groove touch-up with traverse cutting
- Series expansion of 14 items for circlip groove machining, covering grooving widths from 1.4mm to 4.5mm for a total of 60 stocked items.
- The AC530U grade with Super ZX Coat for a longer tool life is now in stock to cover various materials from steel and stainless steel to non-ferrous metals

Fig 1

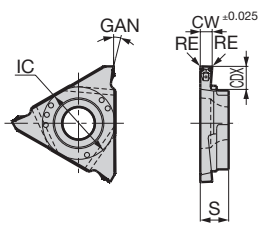

Fig 2

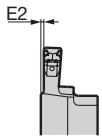

Grade		Cutting Edge	GAN
Coated Carbide	AC530U	Honing	15°

* For the rake angle when fitted on the holder, refer to page F44.

Note 1: Please note that inserts with edge width (CW) less than 1.85mm have different cutting edge distance (E2).
Note 2: Figure shows right hand (R) tool.

Recommended Cutting Conditions

Work Material	Machining Details	Cutting Conditions		Groove Width CW (*mm*) 1.4 to 2.3	2.5 to 3.3	3.5 to 4.5

Special Grooving Insert Request Form

This form applies to the GWC, GWCS, and GWCI inserts.

To order special grooving inserts, fill out the form below (indicate preference by circling the item or specify dimensions), and send it to a Sumitomo Sales Representative or distributor. (Make a copy of this form.) For grooving insert shapes, widths of cut, cutting edge lengths and grades not listed below, contact your Sumitomo Sales Representative or distributor.

Form instructions

1. The above illustration shows only external right-hand and internal left-hand inserts. (The external left-hand and internal right-hand inserts will be opposite to the above illustration.)
2. The following two insert sizes are available.
   3: Inscribed circle 9.525mm
   4: Inscribed circle 12.70mm
3. Dimension limits for groove width and groove depth.
   (1) Maximum Width of Cut (CW): 4.8mm
   · For Models ① and ④ : CW ≤ 4.8 (SumiTurn B-Groove (BF Type) is 4.5mm)
   · For Model ② : CW + C1 ≤ 4.8 (SumiTurn B-Groove (BF Type) is 4.5mm)
   · For Model ③ : CW + E1 (or C1) + C2 ≤ 4.8 (SumiTurn B-Groove (BF Type) is 4.5mm)
   (2) Minimum Width of Cut (CW) · For Insert Size "3": CW ≥ 0.33mm
   · For Insert Size "4": CW ≥ 0.75mm
   (3) Groove Depth (CDX) · For Insert Size "3": CDX ≤ 0.8 to CDX ≤ 2.5mm (For I.D.: CDX ≤ 0.8 to CDX ≤ 2.0)
   · For Insert Size "4": CDX ≤ 2.0 to CDX ≤ 5.0mm (For I.D.: CDX ≤ 2.0 to CDX ≤ 2.5)
4. SumiTurn B-Groove (BF Type) grooving inserts with chipbreaker are limited to insert size 4 and AC530U grade. For shape details, please contact us directly.
5. The following shows the standard tolerance for inserts.

Symbol	Standard Tolerance
CW	±0.025mm
CDX	±0.05mm
KAPR1, KAPR2	±1°

Unless otherwise specified, inserts are made to standard tolerances.

6. Insert grades are based on the catalogue numbers in stock.
7. The applicable tool holders for Models ①, ② and ④ should match the CW dimension. Contact us for Model ③.

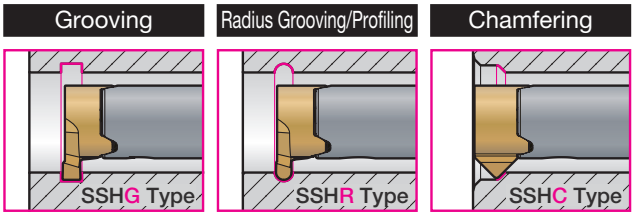
SSH Toolholders

■ Features

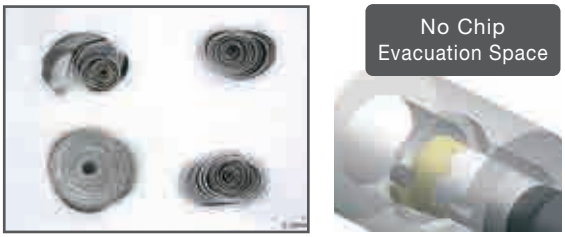
- Internal coolant supply for outstanding chip evacuation
- Tough carbide body for stable machining even with small diameters
- Adopts AC1030U for excellent machined surface quality
- Min. bore diameter of ø8mm and up supported
- Wide variety of widths of cut
  In addition to grooving applications, we have a lineup of 12 catalog items for c-clip groove machining



■ Chip Control

Stable and smooth evacuation of curled chips even on small bore diameters

SSH Type



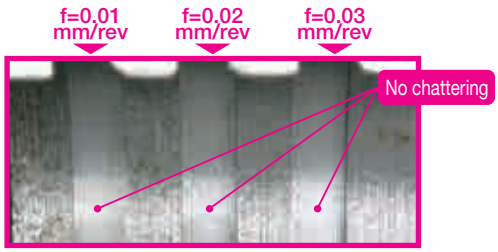
Evacuation from grooves is poor, inviting sudden breakage

Competitor's Product

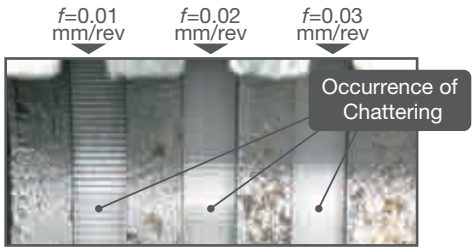
Part Material: Medium Strength Steel (S45C) Diameter: ø13mm Cutting Conditions: v_c=50m/min, f=0.02mm/rev, a_p=1.0mm Wet (Oil-based)

■ SSH Type Chatter Resistance

Outstanding sharpness and carbide shank suppress chatter



SSH Type

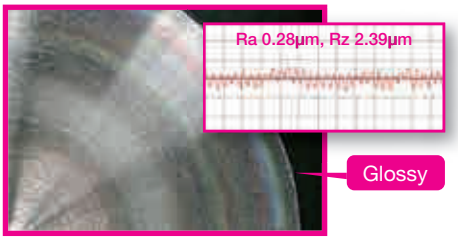


Competitor's Product

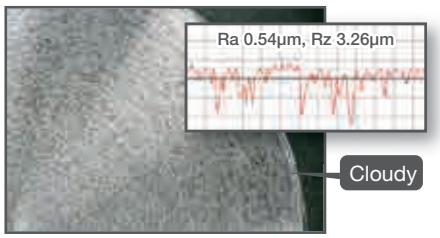
Part Material: Medium Strength Steel (S45C) Diameter: ø13mm Cutting Conditions: v_c=100m/min, f=0.01, 0.02, 0.03mm/rev, a_p=0.2mm Wet (Oil-based)

■ SSH Type Machined Surface Quality

Glossy, Beautiful Surface Finish



SSH Type



Competitor's Product

Part Material: Alloy Steel (SCM440) Diameter: ø30mm Cutting Conditions: v_c=180m/min, f=0.02mm/rev, a_p=0.2mm Wet (Oil-based)

Recommended Cutting Conditions

Cutting Conditions below reflect EH520V grade

Material		Speed (SFM)	Feed Rate (in/rev)
Steels	free-machining carbon alloys plain carbon steels alloy steels 190-330HB alloy steels 330-450HB	450-750 400-700 400-700 350-600	.004 - .012
Stainless Steels	martensitic/ferritic stainless steel austenitic stainless steel	250-650 175-700	.004 - .009
Cast Iron	gray cast iron 190-330HB gray cast iron 330-450HB alloy/ductile irons	400-700 350-600 250-650	.004 - .015
High Temperature Alloys	high temp alloys 200-260HB high temp alloys 260-450HB titanium alloys Ti 6Al-4V	60-250 30-175 90-250	.003 - .008
Non-Ferrous Materials	free-machining aluminum alloys copper/zinc/brass non-metallics	600-2500 300-900 350-1200	.004 - .012

GWB Toolholders

■ Features
- Vertically-mounted insert enhances tool rigidity
- Double clamping holder design improves stability during continuous and interrupted cutting. Can also be used for traverse cutting
- Long tool life for interrupted cutting applications with the Coated CBN - SUMIBORON BNC30G grade for grooving (BN2000 recommended for continuous cutting)
- Suited for grooving hardened steel, powdered metals, and cast irons. Variety of widths available from .059 to .236" and *1.5 to 6.0mm*

Fig 1

* It is also possible to manufacture widths of cut other than those listed above (CW = 1.5 to 6.0mm).

Grade Features (See page L9 for details on BN7000 & BN7500)

Grade	Application Range	Features	HV(GPa)	TRS(GPa)
BN2000	Continuous Grooving	General-purpose grade with superior wear resistance	31 to 34	1.0 to 1.1
BNC30G	Interrupted Grooving	Grade suited to interrupted grooving. Features tough substrate and special ceramic coating that exhibits both peel-off and wear resistance.	33 to 35	1.1 to 1.2

Recommended Cutting Conditions

Cutting Conditions	H Hardened Steel
Cutting Speed v_c (SFM)	260 to 400
Feed Rate f (IPR)	.0016 to .0032

* In order to avoid thermal cracking of the SUMIBORON cutting edge during interrupted cutting, ensure that the work material is thoroughly dry before cutting.

Application Examples

Tooling	Work Material	Tool Cat. No.	Cutting Condition	Tool Life Comparison
Shaft Grooving: Continuous  Required Surface Roughness for Groove Sides: Ra0.4μm	Carburized steel 58 to 62HRC	CGAR1504200 BN2000	v_c: 120m/min f : 0.05mm/rev Groove Depth: 2mm Dry	
Spline Grooving: Interrupted 	Carburized steel 58 to 62HRC	CGAR1504200 BNC30G	v_c: 100m/min f : 0.05mm/rev Groove Depth: 1.6mm Dry	
N·m Recommended Tightening Torque (N·m)

CGA PSC / BNGG

CGA PSC

Features & Benefits

- New double clamping system provides reliable grooving of hardened steel
- 80° tangentially mounted CGA style insert for improved rigidity
- Wide range of widths and grades for continuous and interrupted grooving operations
- New special coated CBN grade BNC30G extends tool life of insert

Features & Benefits

Top Clamp
for Hardened Steel Shallow Grooves

- Improved rigidity for longer tool life
  Strong clamping reduces insert breakage and holder chatter
- Enhanced tooling for *2mm* fine grooves or threading
  Grooving and threading can be done by changing the support

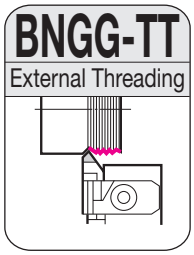

Fig 1 (Grooving)

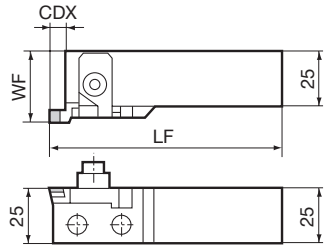

Fig. 2 (Threading)

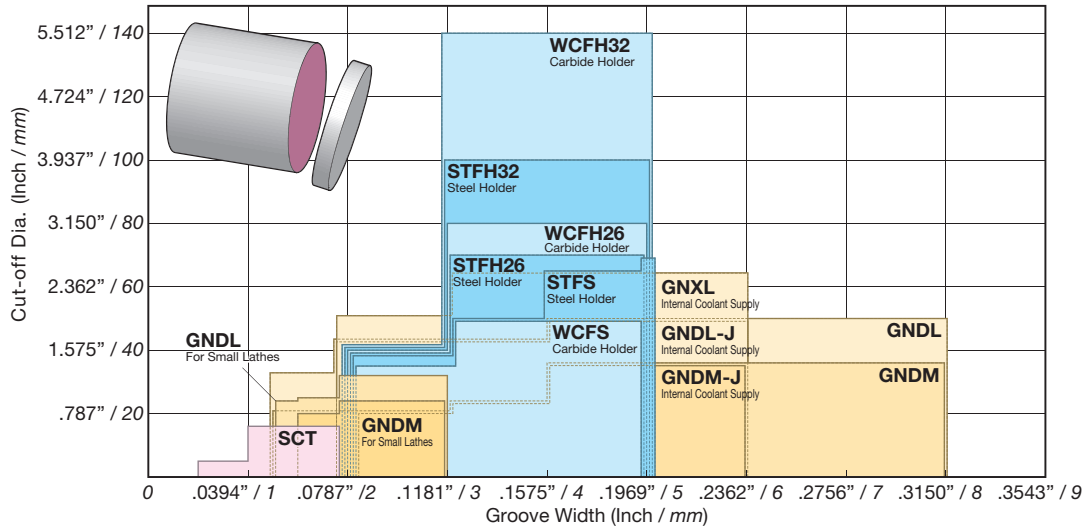
Cut-off



■ Range of Tool Applications (For Solid Workpieces)

Applications	Series	Shape	Insert Shape ( ): indicates no. of cutting edges	Cut-off Dia. 25 50 75 100(mm) / Groove Width 2 4 6 8 10(mm)	Features
For Small Lathes	**SCT**		(2) In Stock: Right Left Neutral	16.0 / 2.0 / 0.5	· Ground insert with good sharpness · Can clamp even from behind · 2-cornered type
For Small to Medium Diameters	**GNDM/ GNDL** For Small Lathes		(2) In Stock: Right Left Neutral	32.0 / 1.25 / 3.0	· High-rigidity design and outstanding chip control · Unground 2-cornered type · Available Seat Size starting at *1.25mm*
	GNDM(-J)/ GNDL(-J) GNDXL			50.0 / 2.0 / 8.0	· High-rigidity body, rigid clamping · Outstanding chip control · Unground 2-cornered type
For Medium to Large Diameters	**STFH/ STFS** (SumiGrip Jr.)		 (1) In Stock: Right Left Neutral	100.0 / 2.0 / 5.0	· Can be used for large diameter machining up to *ø100mm* · Economical steel shank · 1-cornered self-grip type
	WCFH/ WCFS (SumiGrip)		 (1) In Stock: Right Left Neutral	140.0 / 2.0 / 5.0	· Can be used for large diameter machining up to *ø140mm* · High-rigidity carbide shank · 1-cornered self-grip type

■ Cut-Off Tool Series

Small Diameter Cut-Off Toolholders **SCT**		· Our first recommendation for small lathes · Excellent sharpness reduces cutting resistance and central pips!	
Cut-off Toolholders **GND Grooving** GNDM(-J) / GNDL(-J) GNDXL		· Our first recommendation for small to medium diameters · Enables stable cutting off due to high-rigidity body and rigid clamping	
Cut-off Toolholders **SumiGrip Jr.** Steel Shank **SumiGrip** Carbide Shank		· Our first recommendation for medium to large diameters · Blade type is also available for cutting off up to *ø140mm*	

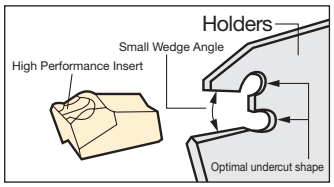
SumiGrip

■ Features

- Available in carbide blade (SumiGrip) and steel blade (SumiGrip Jr.)
- Capable of interrupted machining.
- Can be used for cutting off, grooving, chamfering, etc.

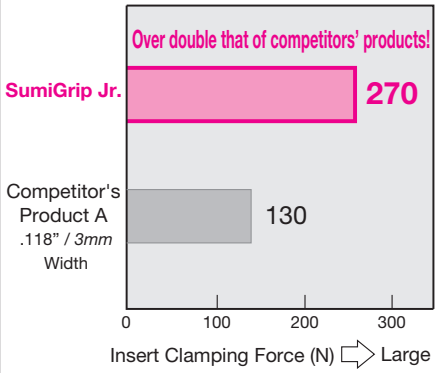
■ Types

1. Tool Block Type
   STFH (Steel) / WCFH (Carbide)
2. Shank Type
   STFS (Steel) / WCFS (Carbide)

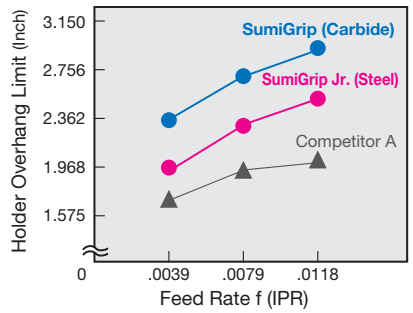


■ Cutting Performance (Holder)

● Insert Clamping Force

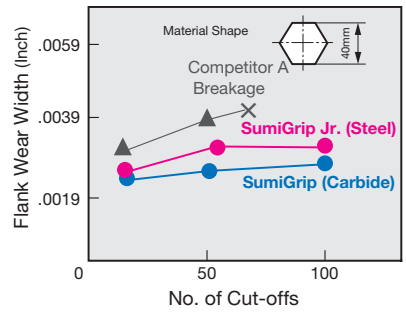


● Holder Overhang



Part Material: Medium Strength 1045 Steel (ø1.968", 250HB)
Cutting Conditions: v_c= 260 SFM, Dry

● Wear Resistance



Part Material: Medium Strength 1045 Steel (Hex), Insert: .118" Width Coated
Cutting Conditions: v_c= 500 SFM, f= .0059 SFM
Wet (Water Soluble)

■ GG / GF / CF Chipbreaker, New Grade: AC1030U

- Utilizing grooving tool GND Series chipbreakers for excellent chip control.
- Low cutting force chipbreaker GF (neutral) or CF (handed) inserts, coupled with a carbide blade enable stable machining and prevents chattering even when machining stainless steel.
- Achieving stable and long tool life with the AC1030U grade.

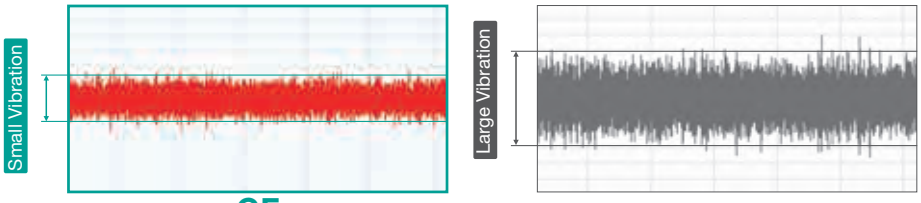
■ Cutting Performance (Chipbreaker)

- Chip Control Performance

GF | GG | Conventional Tool

Part Material: 1045 Steel (ø1.575")
.118" Width Cut-Off
Cutting Conditions: v_c= 330 SFM
f= .0039 IPR
Wet

- Anti-Vibration Performance



GF | Conventional Tool

Part Material: SUS316 (ø1.575")
.118" Width Cut-Off
Cutting Conditions: v_c= 330 SFM
f= .0039 IPR
Wet

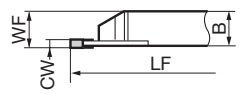
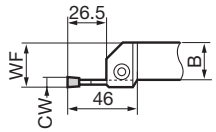
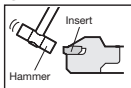
Brazed Blade



Blade Clamp



● Insert Mounting Method



Mount the insert by lightly knocking it in with a wooden or plastic hammer.
(Check that the insert cannot be pulled out by hand.)

⚠ Note that driving in the insert too far may cause damage to the insert or holder.

Features

- Simple Indexable Inserts
  New clamping system makes it possible to change corners simply by loosening the screw from the back
- High quality surface finish
  Excellent chip removal with good surface finish even at the center of the part material end face.
- Long, stable tool life with PVD-coated grades: AC1030U and AC530U

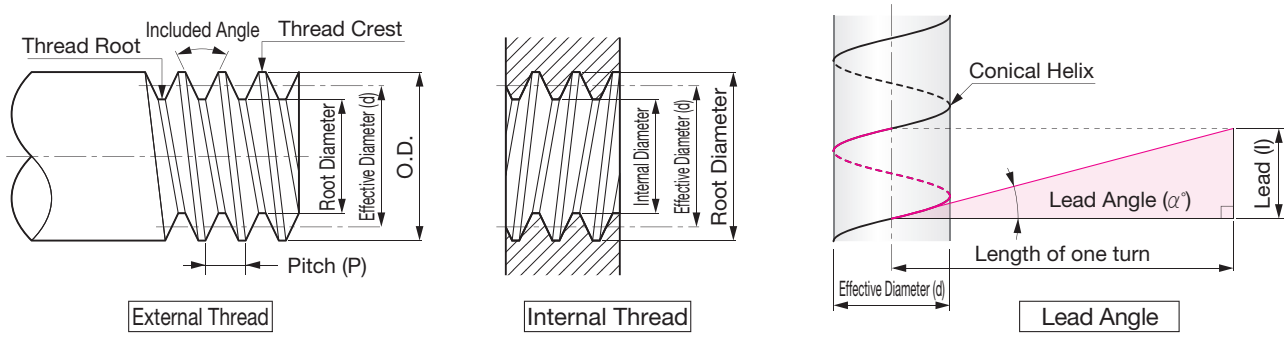
R/Rc : 55° Taper Thread for Pipe BSPT
NPTF : 60° American NPTF
UNJ : 60° UNJ

Basics of Threading

■ Parts of a Screw



Effective Diameter (d) : Diameter of imaginary cylinder that passes through the thread at the point where the groove and ridge widths are equal
Pitch (P) : Distance between two ridges adjacent to each other
Lead (l) : Distance the screw thread moves axially in one turn
(On a single threaded screw, the lead and pitch are identical.)
Lead Angle (α) : Angle made by the conical helix of the thread ridge at a pitch diameter with a plane perpendicular to the axis

● Lead Angle Calculation

$$\tan \alpha^\circ = \frac{l}{\pi \times d} = \frac{n \times P}{\pi \times d}$$

α° : Lead Angle
l : Lead
n : No. of Threads
P : Pitch
d : Effective Screw Diameter

■ Main Screw Types and Standard Thread Patterns

SSTE / SSTI

■ Features

- High-precision inserts with wiper edge for threading, supporting a wide range of applications from general industrial machinery to pipes and aerospace devices
- Stable chip control through use of a 3D molded chipbreaker
- Ground cutting edge flank for improved cutting edge sharpness, resulting in high quality threads

Ground flank periphery around cutting edge

SSTE / SSTI Inserts

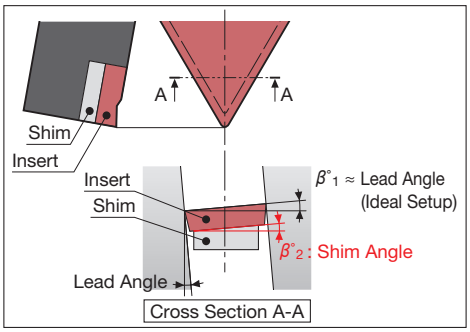
■ Shim Selection

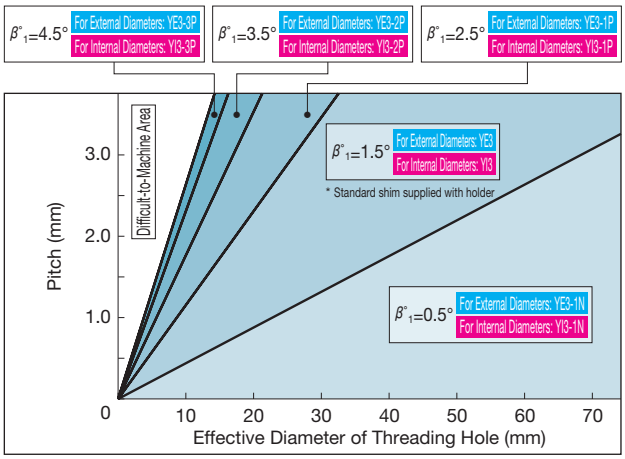
If the pitch is large or the threading diameter is small, the threading lead angle will become large and the effective relief angle will become small.
It is ideal to set the threading insert so that both right and left relief angles are equal.
Therefore, it is necessary to select an appropriate shim based on the thread pitch and effective diameter using the table below.



■ Shim Selection Procedure

1. Choose from [Right-Hand Thread / Left-Hand Thread] in the table.
2. Locate the required threading "pitch".
3. Locate the cell with the required "Effective Diameter" range.
4. Confirm the part no. at the "Shim" row above the corresponding "Effective Diameter" cell located previously. If the shim part no. is different from the one currently in use, change to the correct one.

Example: When machining a M16x2.0 external right-hand thread, the pitch diameter is 14.701mm. In the table below, locate [2.0]mm under the "Pitch" column then move along the row to the right to locate the required "Effective Diameter" range [11.4 - 17.4]mm.
As such, the correct shim should be [YE3-1P], shown in the corresponding cell under the "External" row above.



● Pitch (mm)

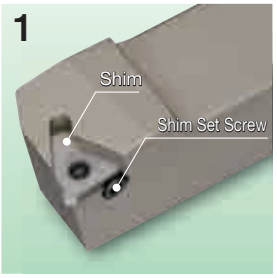
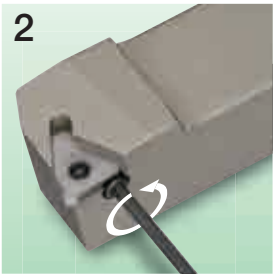
* SSTE Type/SSTI Type holders are shipped with shims for lead angle of β_1 = 1.5° (SSTE Type: YE3, SSTI Type: YI3).
Shims for lead angles of β_1 = -1.5°, -0.5°, 0.5°, 2.5°, 3.5°, and 4.5° are sold separately.
* Shims are not needed for SSTI R1812M16 and SSTI R2016M16. (The holders are already provided with the standard holder inclination of 1.5°.)

■ Shim Replacement



Remove the insert to expose the shim.



Loosen the shim set screw by one to two turns.

Remove the shim and mount a different shim that matches the lead edge angle.

Tighten the shim set screw. (Recommended Tightening Torque 1.0 to 1.5N·m)

■ Wiper Edge (Partial Profile & Full Profile)

Partial Profile	Full Profile
	· Performs threading without machining thread ridges (the machined surface from the previous process is left unworked.) · Enables machining of threads with different pitch widths with the same insert · Finishing of the internal (or external) diameter is required before the threading process. · Fine burrs are easily formed on edges of ridges	· Enables machining of workpieces into shapes compliant with thread standards · Only specific thread specifications and pitch can be machined · In order to finish a thread with the wiper edge, a finishing allowance of 0.1mm on each side is required · Edges of ridges can be rounded off.

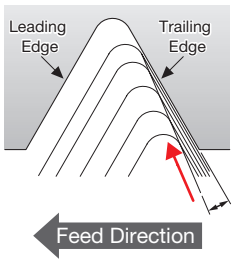
■ Infeed Method

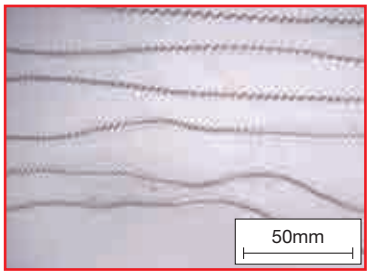
The modified flank infeed is recommended for the SSTE Type/SSTI Type.
This infeed method, which features reduced chip curl diameters and stable chip control, can also decrease chipping on trailing edges that often occurs in radial infeed machining. (1° is recommended for the modification angle.)

● Impact of Infeed Method on Chip Shapes

Work Material: SUS316, M30 x 1.5 Cutting Conditions: v_c=60mm/min Wet, 8 Passes

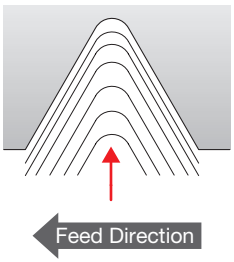
Modified Flank Infeed

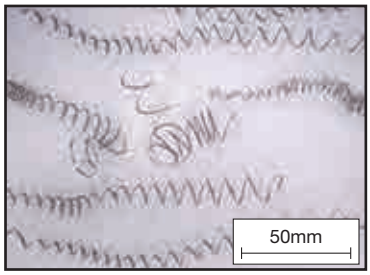




Reduced curl diameters ensure smooth, stable chip control (performance)

Radial Infeed Machining





Large curl diameters cause unstable chip control

No. of passes and depths of cut in the table above are general guidelines only. Increase or decrease depending on conditions. However, the maximum depth of cut should be kept to 0.5mm or less.
When using an insert with a wiper edge, add machining allowance to the total depth of cut.

■ Recommended Cutting Conditions

*When pitch becomes smaller, decrease the cutting speed. In the case of inserts for internal threading without wiper edge, the number of passes should be increased.

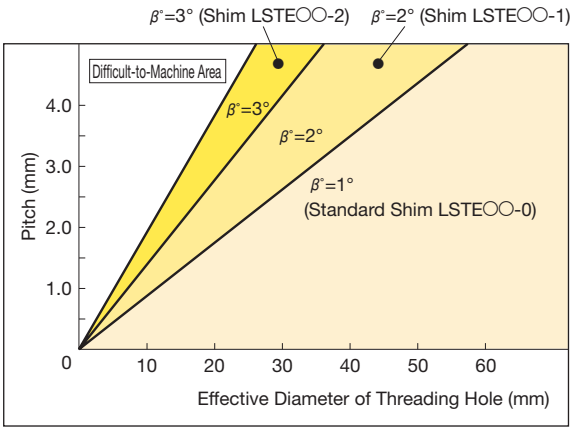
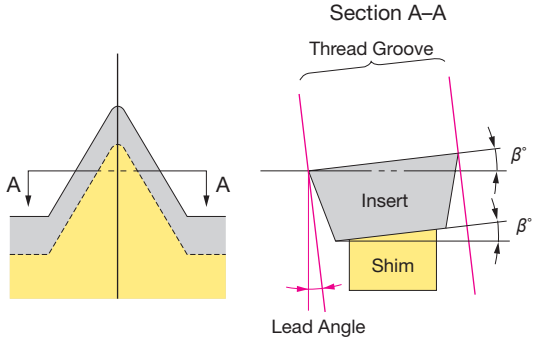
■ Shim Selection for External Threading Tool LTE Type Holder





Standard shim that comes with LTE has β=1°.
β=2°, 3° shims are sold separately.
STE and STI Type holders do not come with shims.

Features	It is often used in common tooling for workpieces that have a thread at their top end. In this type of tooling, the undercutting width indicated with the arrow can be reduced since the cutting edge point is placed closer to the guide bush side.	Often used when a thread is at the middle of the workpiece or at the rear. In this type of tooling, the undercutting width indicated with the arrow can be reduced since the cutting edge point is placed closer to the back turning side.	With a left hand holder used, a sufficient cutting distance can be kept since the cutting edge position is separate from the guide bush. For the left-hand holder, the selection of A type and B type is the reverse of the right-hand holder. (B indicates the guide bush side while A indicates the back turning side.)

■ Tooling Systems

Application	System Name		Feature	Ref. Page
Turning	ICTM STANDARD HSK Tooling System		Shanks for turning applications in multi-tasking machines, conforming to the ICTM (Interface Committee for Turning Mill) Standard. Compatible with HSK-A type, tools can be shared between multi-tasking machines and machining centers. Compliant with ISO standard ISO12164-3:2008.	G3 ~
Turning / Milling	Polygon Shank-SumiPolygon		Polygonal keyless coupling system achieves an indexing accuracy of ±2μm. Supports both turning and rotating tools. Compliant with ISO standard ISO26623-1:2008.	G8 ~
Milling	Smart Damper™		A special anti-vibration mechanism is built in to utilize high-efficiency and high quality machining with a long overhang.	G24 ~
Milling	IGETALLOY ABS System		This quick change system for round tools uses an unique mechanism with a strong holding force. The system offers high rigidity and precision, and exhibits good indexing accuracy during tool changes.	G26 ~
Milling	Modular Taper Shank		Achieving high-precision machining by increasing rigidity at high-speed rotations with two locating faces on the taper and flange, along with an excellent clamping mechanism. Compliant with ISO standard ISO 26622-1:2008.	G28
Milling	HSK Tooling System		The ISO standard for milling shanks with 2 locating faces.	G28

ICTM STANDARD

HSK TOOLING SYSTEM ARE MADE TO ORDER ITEMS

■ Features

The HSK tooling system has been adopted by Japan's 17 major machine tool manufacturers as the interface for turning tools in multi-tasking machines. It is based on the ICTM (Interface Committee for Turning Mill) standard.
Based on the ISO standard HSK shank, this system is designed to improve precision in turning applications, and is compatible with the HSK-A type that is widely use on machining centers.

* Catalog numbers have been changed due to ISO standardization (ISO 12164-3:2008).

Cut the boring bar to fit.

Polygon Shank Toolholders

■ General Features

SumiPolygon shanks feature keyless couplings with the characteristic polygonal shape, which bear cutting torque evenly on three surfaces, providing high rigidity and high index accuracy.

For support with non-standard design specifications, contact us directly.

■ Features

● Sizes
- Shank size PSC32 (DCSFMS = 32mm) to PSC80 (DCSFMS = 80mm) supported

● High Rigidity/High Precision
- 1/20 polygon tapered shape supported on 2 faces for high rigidity
- Keyless coupling distributes cutting torque uniformly to 3 faces, reducing fluctuations in cutting edge height
- Repeatability when tools are changed is within ±2μm on all 3 axes

● Reduced Tool Change Time
- Changing inserts on the machine is not needed so the tool change time is significantly reduced

● Coolant supported (up to 1MPa)

■ Coupling Structure

■ Repeat Accuracy

Repeatability when tools are changed is within ±2μm on all 3 axes X-Axis (Radial Direction) Y-Axis (Center Height Direction), Z-Axis (Lengthwise Direction)

Damper Arbors

■ General Features

Dampers are arbors equipped with a special anti-vibration mechanism that has both counter damping and friction damping effects.
This reduces chatter and prevents decreased machined surface quality and tool life when machining with a large overhang.

■ Features

· Using a basic holder and damper head in combination
· Basic holder lineup supports **BBT50** arbor and **HSK-A100** arbors in different lengths.
· Through-center coolant compatible.

Surface Milling Example with 347mm Overhang Length

Arbor	Results	
	Machined Surface	Vibration
Competitor's Arbor No vibration control mechanism		Damper With Vibration Control Mechanism		
Reduce chatter by using a smart damper!!

Part Material: Medium-Carbon Steel (S50C)
Diameter: ø63mm (5-Flute)
Cutting Conditions: v_c = 100m/min, f_z = 1.0mm/t, a_p = 1.4mm, a_e = 30mm

Refer to the user's manual for methods of mounting to basic tool holders.
The cutter is not included in the weight.
A hook wrench and clamp bolt for tightening the cutter are included.
DCSFMS shows the cutter mounting surface diameter. Use caution if the mounting surface diameter is small relative to the cutter outer diameter.

ABS System

ABS SYSTEM
ARE MADE TO ORDER ITEMS

■ Features

The IGETALLOY ABS system has received high acclamation worldwide for its strong clamping force, high rigidity and high precision. ABS is one of the quick change systems for round tools, which increases our customers' productivity in special tooling applications, while simplifying and standardising these special tools.
The SBA system is also available. For details, please contact us.

■ Overview

- The clamp screw, taper screw and slide pin act as a wedge for strong holding force.
- High rigidity, high precision. High indexing accuracy during tool changes.
- A wide array of sizes are available to cover a variety of tools.
- Easy handling allows short tool change times.
- Allows coolant supply from inside the spindle.
- Strong clamping force with small diameters.

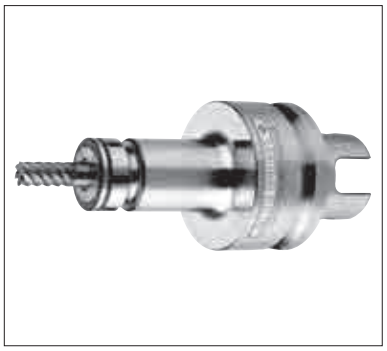
Modular Taper Shank / HSK Tooling System

*Catalog numbers have been changed due to the establishment of ISO standard ISO 26622-1:2008.



Modular Taper Shank

This has widespread use throughout Europe and the United States.

Features

- Tool shape suitable for high-speed rotations.
- Achieving high-precision machining by increasing rigidity at high-speed rotations with two locating faces on the taper and flange, along with an excellent clamping mechanism.
- Hollow and short taper reduces weight and shortens ATC time when changing tools.

HSK Tooling System

This hollow shank was developed by RWTH Aachen University and the German Industry Association, and has been adopted as an ISO standard.

Features

- DIN standard with 2 locating faces.
- Two locating faces on the taper and flange for high precision and high rigidity machining.
- Hollow and short taper reduces weight and allows for high-speed ATC.

This section introduces an overview of the series.
Refer to the separate "SEC-Cartridge Unit / Micro Unit" catalog for details on Micro Units (holders, inserts, spare parts) and quill unit seat machining.

Note: Use MUP type micro units when designing new tooling.
Conventional tool types (MUN type) are manufactured only as replacement parts.

Cartridge Units

This section introduces an overview of the series.
Refer to the separate "SEC-Cartridge Unit/Micro Unit" catalogue for details on Micro Units (holders, inserts, spare parts) and quill unit seat machining.

■ Features of Each Model

Classification	Standard type	MINIT type		ISO type			
Cat. No.	BU type	MINIT P24 type	MINIT N38 type	SP type/SX type/SC type (Expanded, New, New)	CP type (Expanded)	CE type (Expanded)	PN type
Shape / Items	The most common type of cartridge units	Mini type with good edge sharpness and chip control	Compact type for multi-tooling configurations	Screw-on type positive cutting edge with excellent sharpness and chip evacuation	Positive cutting edge type for low-rigidity work	High rake cutting edge type for non-ferrous metal machining	Negative cutting edge type with excellent compatibility and economy
Clamp Mechanism	Pin Lock	Screw-on	Pin Lock	Screw-on	Clamp-on	Clamp-on	Pin Lock
Adjustability	Yes	Axial: No Radial: Yes	No (By using shims)	Yes	Yes	Yes	Yes
Rake Angle	Neg.	Pos.	Neg.	Pos.	Pos.	Pos.	Neg.
Applicable Insert Relief Angle	0°	11°	0°	11° (SP type) 7° (SX type/SC type)	11°	20°	0°
Cutting Edge Position	Above centre	Above centre and on centre	Above centre	On Centre	On Centre	On Centre	On Centre
Min. Bore Dia. (mm)	ø24	ø24	ø38	ø30	ø30	ø30	ø38

■ Cartridge Unit Cat. No. (For Triangular Inserts) by Model/Tooling type

( ) shows the min. bore diameter (mm).

Face Milling	For General Steel, Cast Iron, Exotic Alloy and Non-Ferrous Metal	WGX	H18
	For General Steel, Cast Iron, Exotic Alloy and Non-Ferrous Metal	DGC	H32
	For High-efficiency Cast Iron / Cast Steel Milling	DNX(F) / DNH, DNHS	H44
Shoulder Milling	For High-precision Milling of Steel, Cast Iron, Stainless Steel and Non-Ferrous Metal	WEZ	H50
	For High-precision Milling of Steel, Cast Iron, Stainless Steel and Non-Ferrous Metal	WEX	H77
	For High-efficiency Deep-Step Shoulder Milling	WRX	H92
	For Titanium Alloys	WSE	H98
	For High-feed Milling of Steel, Die Steel, Cast Iron, Stainless Steel and Non-Ferrous Metal	WFX	H101
	For General Steel and Cast Iron	DFC	H114
	For High-efficiency Milling of Steel, Cast Iron and Stainless Steel	TSX	H126
	For Steel, Cast Iron and Stainless Steel	PWS(F) / PWSR	H151
High Feed	For High Feed Machining of Steel, Exotic Alloy, Stainless Steel, and Cast Iron	DMS	H154
	For High-speed, High-efficiency Milling of Steel, Die Steel, Cast Iron, Stainless Steel and Non-Ferrous Metal	WFXH	H164
	For High Feed Machining of Steel, Cast Iron and Stainless Steel	MSX	H170
Multi-Purpose		WMM	H175
Radius	For Stainless Steel and Exotic Alloy	RSE	H178
	For Steel, Die Steel, Cast Iron, Stainless Steel and Exotic Alloy	RSX	H182
	For Steel, Die Steel, Cast Iron, Stainless Steel and Non-Ferrous Metal	WRCX	H193
R / 3D Profiling	For Roughing	WBMR	H200
	For Finishing	WBMF	H203
Groove / T-Slot	For Groove Milling of Steel and Cast Iron	TGC	H205
	T-Slot Endmill	TSE	H208
Chamfering	For Chamfering	WFXC	H209
Non-ferrous Metal	For High-speed, High-efficiency Milling of Aluminum Alloy and Non-Ferrous Metal	ALNEX ANX	H213
	For High-efficiency Milling of Aluminum Alloy and Non-Ferrous Metal	HF	H221
	For High-speed Milling of Aluminum Alloy and Non-Ferrous Metal	RF	H227
	For Small Diameter Milling of Aluminum Alloy and Non-Ferrous Metal	SRF	H229
	For High-speed, High-efficiency Milling for Non-Ferrous Metal	WAX	H231
High-speed Cast Iron	For High-speed Finishing of Cast Iron	CBN BN Finish Mill EASY (FMU / FMU-E)	H236
	For High-speed, High-efficiency Milling of Cast Iron	Cutter RM for High-speed Milling of CBN Cast Iron	H237

CVD

Work Material	Grade	Hardness (HRA)	TRS (GPa)	Coating Type	Coating Thickness (μm)	Features	Old Grades
P Steel	**ACP100**	89.3	3.1	Super FF Coat	6	· For high-speed machining of steel · Grade emphasizing wear resistance for high-speed machining	AC230
	ACP2000	89.5	3.2	Absotech	10	· For high-speed machining of steel · Stable long tool life with high-speed machining is realized by adopting a tough carbide substrate and a new coating with excellent thermal crack resistance	ACP100
M Stainless Steel	**ACM200**	89.8	3.4	Super FF Coat	6	· For machining high-hardness stainless steel · Adopts newly developed high-strength cemented carbide with excellent wear resistance and thermal resistance, realizing outstanding stability when machining hardened stainless steel	AC230
K Cast Iron	**ACK100**	92.0	2.4	Super FF Coat	6	· For high-speed cast iron milling · Adopts a high-hardness substrate as a grade with high wear resistance	—
	ACK200	91.7	2.5	Super FF Coat	6	· For high-speed cast iron milling · Adopts a tough carbide substrate as a grade with excellent wear resistance and thermal crack resistance	AC211
	ACK2000	91.7	3.1	Absotech	10	· For high-speed cast iron milling · Stable long tool life with high-speed machining is realized by adopting a tough carbide substrate and a new coating with excellent thermal resistance	ACK100 ACK200

PVD

Work Material	Grade	Hardness (HRA)	TRS (GPa)	Coating Type	Coating Thickness (μm)	Features	Old Grades
P Steel	**ACU2500**	91.6	3.8	Absotech	3	· General-purpose grade supporting steel, stainless steel, and cast iron machining · Adopts a carbide substrate with excellent fracture resistance and wear resistance, plus a new coating with excellent wear resistance and chipping resistance, providing stable long tool life with various work material grades	—
	ACP200	89.5	3.2	Super ZX Coat	3	· Our 1st recommended grade for steel applications · General-purpose grade with an excellent balance of wear and fracture resistance · Also suitable for machining stainless steel	ACZ330
	ACP300	89.3	3.1	Super ZX Coat	3	· For interrupted machining of steel · Tough grade with an emphasis on fracture resistance · Also suitable for interrupted machining of stainless steel	ACZ350
	ACP3000	89.5	3.2	Absotech	3	· Our 1st recommended grade for interrupted or unstable work holding conditions for milling steel · Carbide substrate with excellent thermal crack resistance, plus a new coating with excellent wear resistance and chipping resistance, realizes stable long tool life over a wide range of cutting conditions	ACP200 ACP300
M Stainless Steel	**ACM100**	91.4	3.3	Super ZX Coat	3	· For high-speed machining of stainless steel · Adopts high-hardness micro-grain carbide substrate and super multi-layered coating to realize outstanding wear resistance	ACZ310
	ACM300	89.8	3.4	Super ZX Coat	3	· Our 1st recommended grade for milling stainless steel · Adopts high-strength carbide substrate and super multi-layered coating for next-level wear resistance and fracture resistance	—
S Exotic Alloy	New **ACS2500**	90.8	4.2	ABSOTECH	3	· First recommendation for titanium alloy applications · Carbide substrate with excellent wear and adhesion resistance, coupled with a chipping-resistant coating, balances excellent wear and fracture resistance	ACZ310
	New **ACS3000**	89.8	3.4	ABSOTECH	3	· Suitable for a wide range of exotic alloy machining applications · Realizes superb stability due to a high-toughness carbide substrate with a highly chipping-resistant coating	—
K Cast Iron	**ACK300**	91.4	3.3	Super ZX Coat	3	· General-purpose grade with an excellent balance of wear and fracture resistance	ACZ310
	ACK3000	91.7	3.1	Absotech	3	· Our 1st recommended grade for milling cast iron · Adopts a high thermal conductivity carbide substrate and a new coating with excellent wear resistance and chipping resistance, realizing stable long tool life over a wide range of cast iron machining operations	ACK300
N Non-Ferrous Metal	**DL1000**	92.9	2.1	AURORA Coat (DLC)	0.5	· For milling non-ferrous metal, utilizing DLC coat with a low coefficient of friction and excellent adhesion resistance	—
	DL2000	91.6	3.8	AURORA Coat (DLC)	0.5	· For milling non-ferrous metal, utilizing DLC coat with a low coefficient of friction and excellent adhesion resistance	—

Cermet

Work Material	Grade	Hardness (HRA)	TRS (GPa)	Coating Type	Coating Thickness (μm)	Features	Old Grades
P Steel	**T1500A**	92.0	2.2	—	—	· For finishing of steel and stainless steel · Excellent balance of wear and fracture resistance, achieving excellent machined surface quality over a wide range of cutting conditions	T1200A
	T250A	91.4	2.1	—	—	· For finishing of steel and stainless steel · Tough grade with enhanced crack spread resistance	—
M Stainless Steel	**T2500A**	91.8	2.4	—	—	· For finishing of steel and stainless steel · Fine, uniform grain structure greatly improves toughness, realizing long tool life and excellent surface finishes	T250A
	T4500A	91.0	2.3	—	—	· For finishing of steel and stainless steel · Tough grade with excellent fracture resistance and reduced thermal cracking	—

CBN

Classification	Grade	Binder	Carbon Content (%)	Grain Size (μm)	Hardness HV (GPa)	TRS (GPa)	Main Coating Components	Coating Thickness (μm)	Features
K Cast Iron	**BN7125**	Co Compound	90 to 95	2	41 to 44	1.9 to 2.0	-	-	General-purpose grade with excellent wear resistance, fracture resistance, and thermal shock resistance, suitable for machining of cast iron and exotic alloys
	BNS800	Al Alloy	85 to 90	8	39 to 42	0.9 to 1.1	—	—	Grade with 100% solid CBN structure and excellent thermal shock resistance.
	BN7000	Co Compound	90 to 95	2	41 to 44	1.8 to 1.9	—	—	Grade exhibiting wear and fracture resistance in cutting of cast iron and exotic alloys.
	BN500	TiC	65 to 70	6	32 to 34	1.0 to 1.1	—	—	Grade optimized for cast iron cutting. Provides superior wear and fracture resistance.
H Hardened Steel	**BN350**	TiN	60 to 65	1	33 to 35	1.5 to 1.6	—	—	Grade with ultimate cutting edge strength, suitable for heavy interrupted cutting.

Polycrystalline Diamond (PCD)

Classification	Grade	Binder	Carbon Content (%)	Grain Size (μm)	Hardness HK (GPa)	TRS (GPa)	Features
N Non-Ferrous Metal	**DA1000**	Co	90 to 95	up to 0.5	50 to 60	≈ 2.60	High-density sintered material made of ultra-fine grain diamond that demonstrates optimum wear and fracture resistance and excellent edge sharpness.

Carbide A30 Ceramics A36

Cutter Identification Table

Standard Type

DFC (F) 2 2000 R (S)

(1) (2) (3) (4) (5) (6)

- (1) Cutter Series — Refer to Table 1
- (2) Additional Symbols — Refer to Table 2
- (3) Insert Inscribed Circle Size — Refer to Table 3
- (4) Cutter Diameter — Refer to Table 4
- (5) Feed Direction — Refer to Table 5
- (6) Mounting — Refer to Table 6
