The above table does not apply to the following insert codes: SPCH42TR, SPCH42R, SPCH53TR, SPCH53R, SDKN42MT, SDKN42M, SDKN53MT, SDKN53M, SEKN42MT, SEKN42M, SEKN53MT and SEKN53M.

For example,

- although "H" and "K" indicate precision tolerances, the main cutting edges have general precision.
- "M" in this instance represents the Neutral Hand insert.
- "T" in this instance represents negative land edge treatment.
- "R" indicates the feed direction (right hand).

Modular Tools

■ Features

● 12 indexable modular head available!

WEZ	**DMSL**	**RSX**
WEZR	**DMSW**	**WRCX**
WEX	**WFXH**	**WFXC**
WFX	**MSX**	**ANXS**

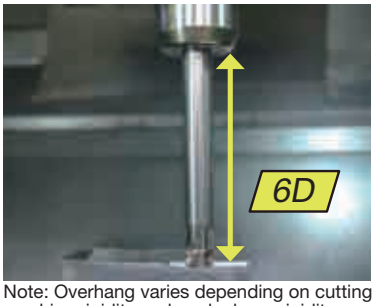
● In addition to carbide arbors and steel arbors, the lineup of integrated BBT types enables a variety of combinations

● General-purpose grade applicable to any work material
Introducing the new grade ACU2500, which is applicable to a wide variety of processes and work materials such as steel, stainless steel and cast iron.

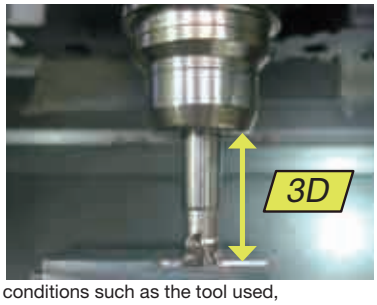
Suitable for milling with ***long overhangs*** *when combined with carbide or steel arbors*

When combined with BBT integrated arbors, ***high load milling*** *is supported*

Modular + Carbide Arbor



Standard Type (Integrated Arbor)



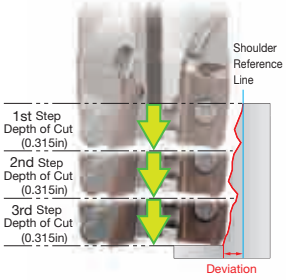
Note: Overhang varies depending on cutting conditions such as the tool used, machine rigidity and work clamp rigidity.

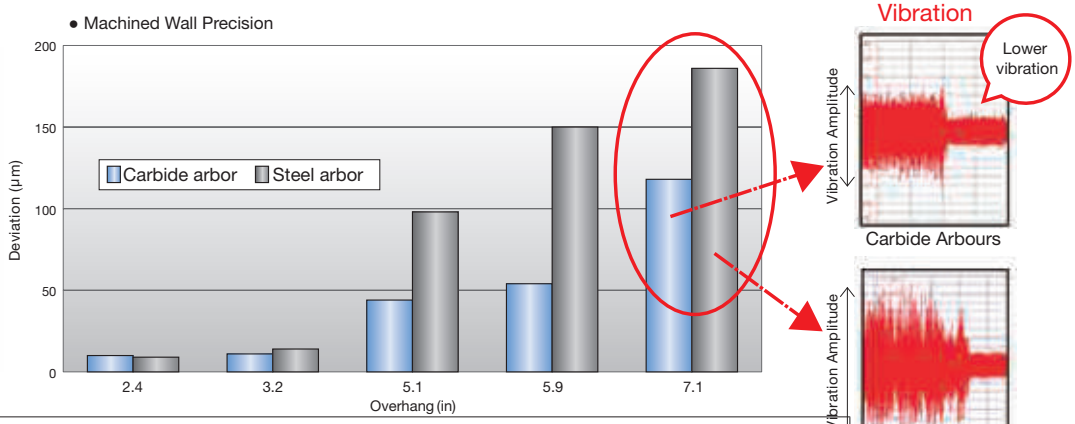
■ Screw Size and Mounting Cutter Size

Screw **CRKS**	Applicable Cutter Size (DC)
M8	*ø16, ø18*
M10	*ø20, ø22*
M12	*ø24, ø28*
M16	*ø30, ø32, ø35, ø40*

■ Cutting Performance

● Carbide arbors achieve greater precision and stable milling compared to steel arbors





Work Material : 1050
Tool : WEX2025M12Z4 (ø25 x 4-flute)
Cutting Conditions: v_c = 328 SFM f_z = 0.004in/t a_e = 3.15in x 3 times a_p = 0.08in Machine: Machining center BT50

General Features

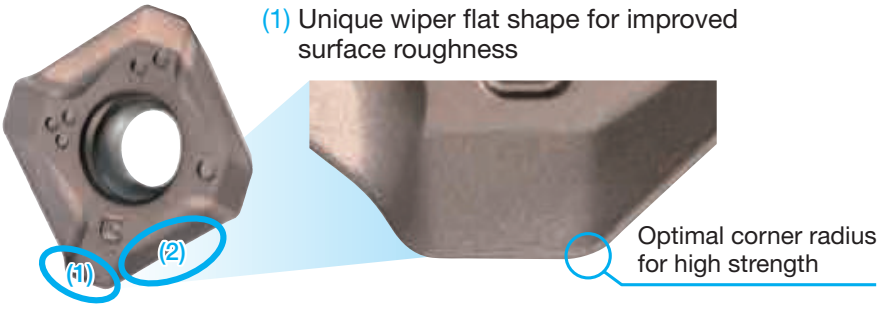
- WGX Series employs a unique chipbreaker design to provide lower cutting force and higher-quality surface finish than conventional cutters.
- Lineup of insert grades and chipbreakers has been significantly expanded. The ACM grades (Series) can be utilized for stainless steels and exotic alloys. Now available: ACU2500/Absotech coating universal grade for a wide range of materials.

Features

- Reduced Cutting Force
  - High-rake chipbreaker designed for use with the WGX Series achieves low cutting force
- High Quality
  - Improved runout precision and unique wiper flat shape ensure excellent surface finish quality
  - Additional edge chamfer reduces burrs and edge chipping (only applies to FG chipbreaker)
- Wide Ranging Product Lineup
  - A wide selection of grades along with 4 types of chipbreakers and wiper inserts are available.
  - Can be used for a wide variety of machining applications.

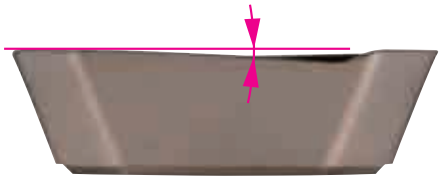
Insert Shape Features

- General-purpose G Chipbreaker



(1) Unique wiper flat shape for improved surface roughness

(2) Large rake angle and cutting edge rake angle for improved sharpness



- FG Chipbreaker with Low-Burr Design

● Numbers inside are number of teeth - Inch Arbor - Sizes of ø6.000" and 125mm and below have coolant holes, *: 4.000" cutter diameter with 1.500" arbor diameter

■ Precautions when Using Wiper Inserts with Holes

· When mounting the wiper insert, attach it as shown in Fig 1. When mounted as shown in Fig 2, normal machined surface roughness cannot be obtained.

Fig 1

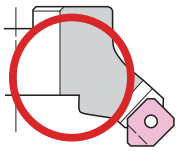

Fig 2

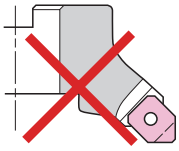

· The wiper insert has a single corner specification.
· For milling with wiper inserts, see "The Basics of Milling, Milling Edition" in Chapter N of the General Catalog.

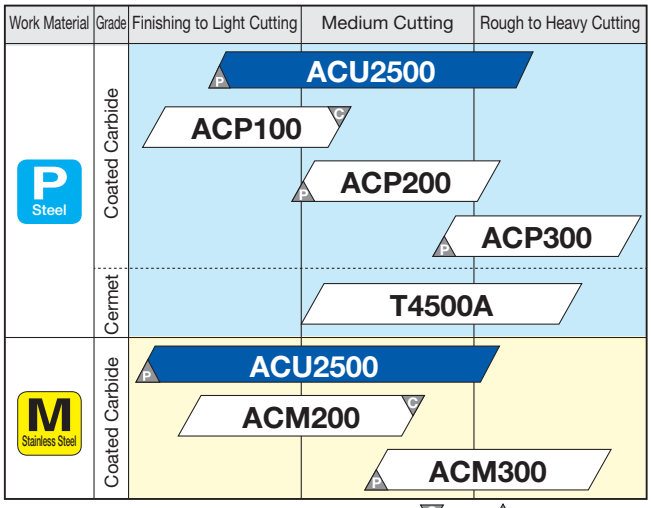
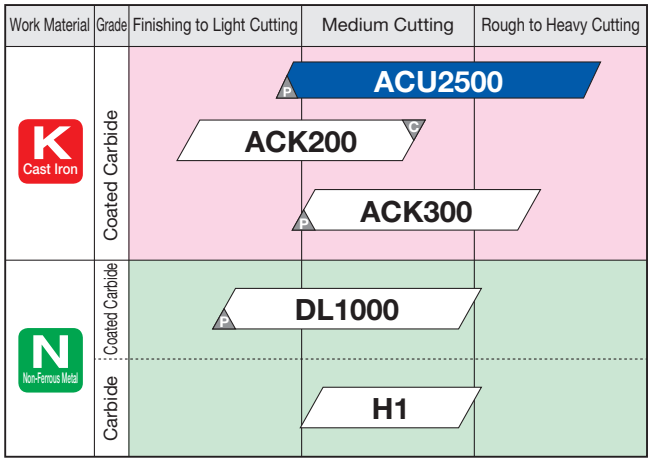
■ Grade Application Range



The letters "C" and "P" at the end of each grade indicate the coating type. C : CVD, P : PVD, Blank: Uncoated



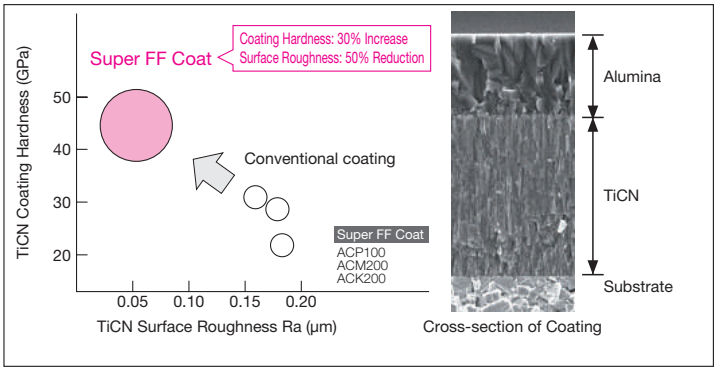
■ Coating Features

C Super FF Coat (CVD: Chemical Vapor Deposition)

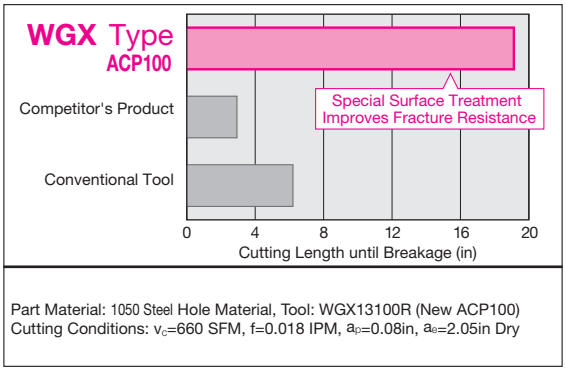
Provides excellent wear resistance and high reliability thanks to our coating stress control technology and the ultra-fine crystal grain coating layer of the Super FF Coat achieved through our proprietary CVD process technology.

- ▶ Achieves excellent chipping resistance with smooth coating and our coating stress control technology.
- ▶ High-speed, high-efficiency machining at a level more than 1.5 times higher than conventional tools is possible with a high hardness coating layer.
- ▶ Achieves more than double the tool life of conventional tools under the same cutting conditions.

Characteristics of the Coating Layer



Fracture Resistance



P New Super ZX Coat (PVD: Physical Vapor Deposition)

Employs our super multi-layered New Super ZX Coat, which utilizes our proprietary thin-layer coating technology and advanced nanotechnology. The coating consists of thousands of alternating, nanometer-thin (1 nanometer=1 billionth of a meter) layers.

- ▶ Compared to conventional tools, the coating hardness has been increased by 40% and the oxidization starting temperature has been increased by 200°C.
- ▶ Enables more than 1.5 times the machining speed and efficiency of conventional tools.
- ▶ Achieves more than double the tool life of conventional tools under the same cutting conditions.

Characteristics of the Coating Layer

Coolant	Dry	Dry
Results	The high wear resistance of CVD coating provides at least double the tool life.	

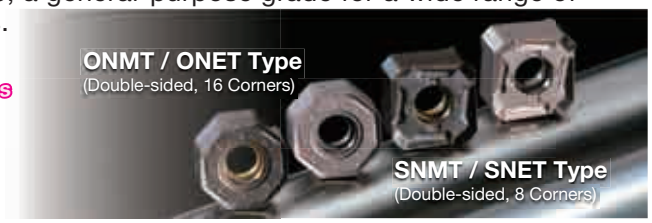
WGX Series

Competitor's Product

The DGC Type insert lineup includes double-sided SNMT/SNET and ONMT/ONET types. Up to 16 corners can be used for improved economy.

■ General Features

Sumi Dual Mill DGC Type employs double-sided inserts with up to 16 corners for excellent economy. This is a general-purpose cutter featuring high cutting edge strength for high efficiency milling and a low-burr chipbreaker design that provides high machined surface quality. DGC also offers ACU2500, a general-purpose grade for a wide range of materials.

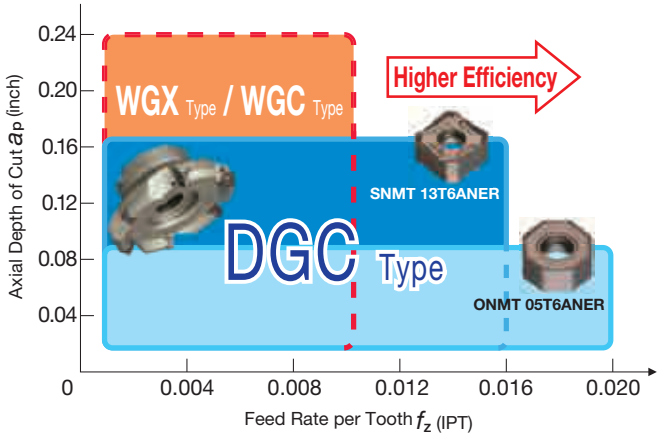


■ Features

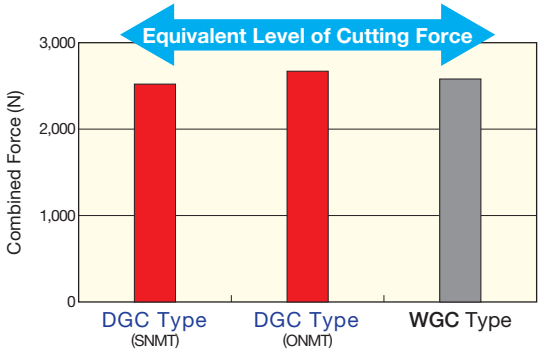
● Same cutting performance as single-sided inserts plus superior economy

Achieves levels of cutting edge sharpness and machined surface quality equivalent to single-sided cutters at a maximum depth of cut of a_p = 0.12".

● Recommended Cutting Conditions for **General Steel**



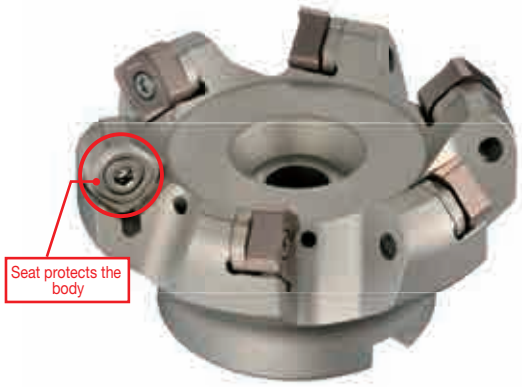
● Comparison of Cutting Force



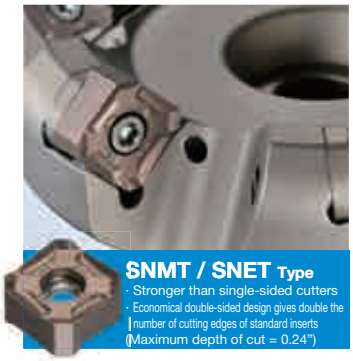
Work Material: 4130 Structural Steel Tool: ø4.000"
Cutting Conditions: V_c = 650 SFM, f_z = 0.012 IPR, a_p = 0.12", a_e = 3.35"

● Common Body Features

Two types of inserts can be used with a single body depending on the milling application, to help reduce tool costs.



Use two types of insert for different applications



SNMT / SNET Type
- Stronger than single-sided cutters
- Economical double-sided design gives double the number of cutting edges of standard inserts (Maximum depth of cut = 0.24")

ONMT / ONET Type
- More economical double-sided design with 16 corners (Maximum depth of cut = 0.12")

● Choose a tool to suit your application from a comprehensive lineup

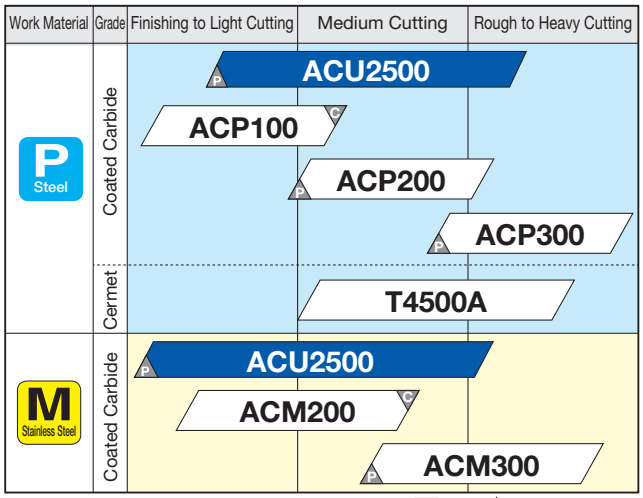
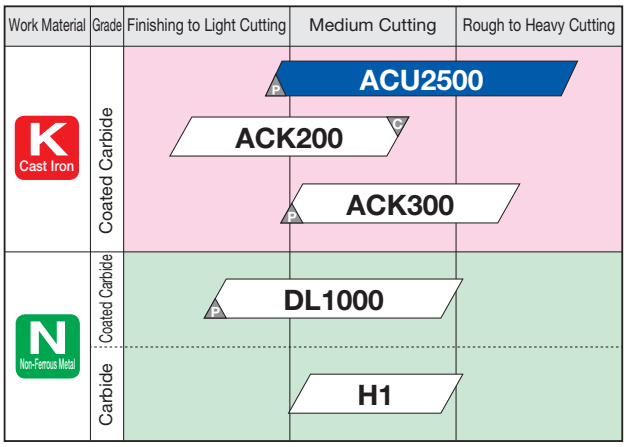
■ Grade Application Range



The letters "C" and "P" at the end of each grade indicate the coating type. C: CVD, P: PVD, Blank: Uncoated



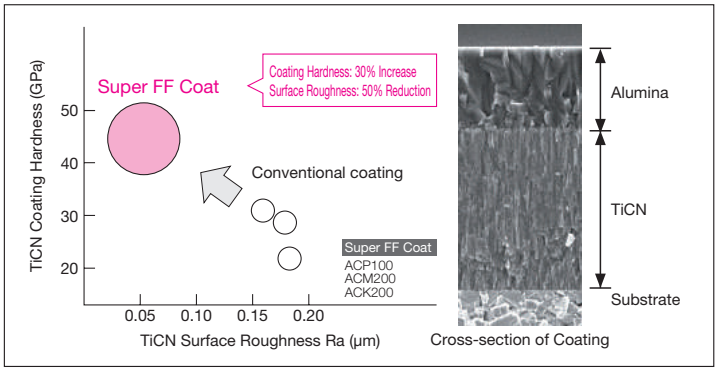
■ Coating Features

C Super FF Coat (CVD: Chemical Vapor Deposition)

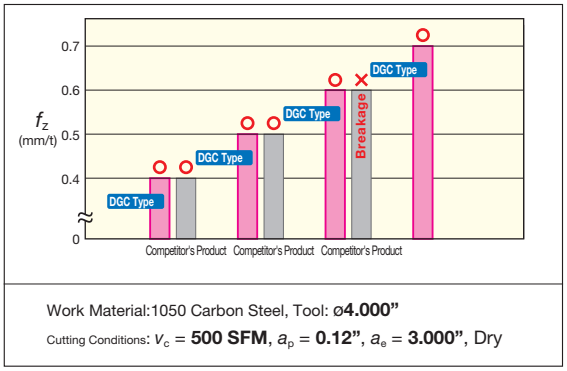
Provides excellent wear resistance and high reliability thanks to our coating stress control technology and the ultra-fine crystal grain coating layer of the Super FF Coat achieved through our proprietary CVD process technology

- ▶ Achieves excellent chipping resistance with smooth coating and our coating stress control technology
- ▶ High-speed, high-efficiency machining at a level more than 1.5 times higher than conventional tools is possible with a high hardness coating layer
- ▶ Achieves more than double the tool life of conventional tools under the same cutting conditions

Characteristics of the Coating Layer



Fracture Resistance



P New Super ZX Coat (PVD: Physical Vapor Deposition)

Employs our super multi-layered New Super ZX Coat, which utilizes our proprietary thin-layer coating technology and advanced nanotechnology. The coating consists of thousands of alternating, nanometer-thin (1 nanometer = 1 billionth of a meter) layers.

- ▶ Compared to conventional tools, the coating hardness has been increased by 40% and the oxidation starting temperature has been increased by 200°C.
- ▶ Enables more than 1.5 times the machining speed and efficiency of conventional tools.
- ▶ Achieves more than double the tool life of conventional tools under the same cutting conditions

Characteristics of the Coating Layer

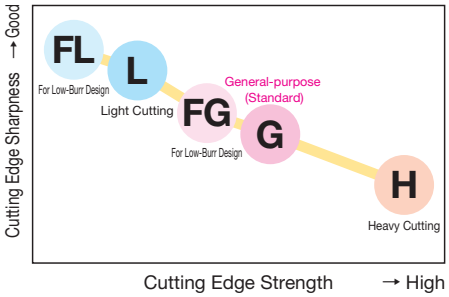
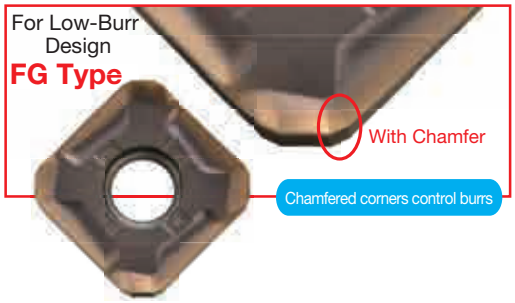
*Can only be used in conjunction with 8 corner inserts

■ Chipbreaker Selection Guide



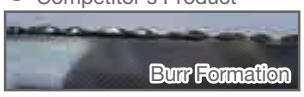
● Improved Milling Quality

· FG type chipbreakers feature a chamfered corner to minimize burrs and provide excellent milling quality.



● FG Type

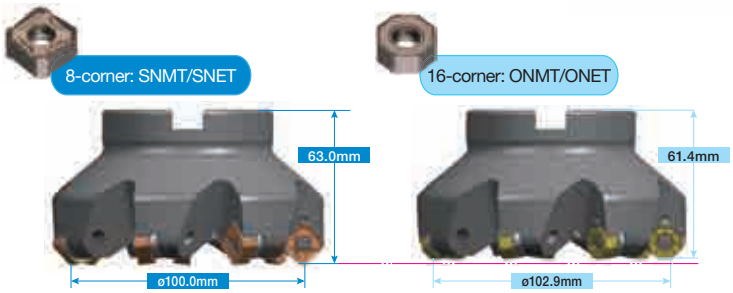
● Competitor's Product



FG type inserts with low-burr design enable high-quality milling with few burrs and minimal edge chipping

Work Material : 4135
Tool : ø100
Cutting Conditions : V_c=660 SFM, f_z =0.008 IPT
a_p=0.12in, a_e=3.35in

Cutter Diameter And Cutting Edge Height

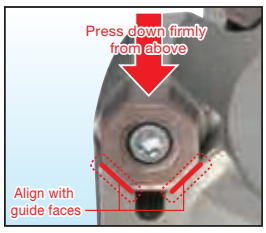


⚠ Note that while the 8-corner and 16-corner types can be used interchangeably on the same body, they have different cutter diameters, cutting edge heights and maximum cutting depths.

Body Shape (Example: With Cutter Diameter of 100mm)

Insert	Cutter Dia. DC (mm)	Cutting Edge Height LF (mm)	Maximum Depth of Cut APMX (mm)	Maximum Depth of Cut APMX (in)
SNMT / SNET	100.0	63.0	6.0	0.236
ONMT / ONET	102.9	61.4	3.0	0.118

16-corner Mounting Method



⚠ Firmly align insert with guide faces, press down in the direction of the arrow, and tighten the screw to fix the insert.

■ Application Examples

		Part/ Work Material	Machine Components / 1050
Tool	Type	DGC Type	Conventional Tool
	Body	DGC13080R (ø80)	ø80
	Insert	SNET13T6ANER-G (8 Corners)	Single-Sided Specification (4 Corners)
	Number of Teeth	6	6
	Insert Grade	ACP200	PVD Grade
Cutting Conditions	Cutting Speed (SFM)	525	525
	Feed Rate per Tooth (IPT)	0.012	0.012
	Feed Rate (IPM)	47	47
	Axial Depth of Cut (in)	0.12	0.12
	Number of Workpieces (pcs/corner)	2	2
	Dry/Wet	Wet	Wet

Can be used under the same conditions as the single-sided inserts. Improves tool economy by doubling the number of cutting edges.

		Part/ Work Material	Machine Components / 1050
Tool	Type	DGC Type	Conventional Tool
	Body	DGC13160R (ø160)	ø160
	Insert	SNET13T6ANER-G (8 Corners)	Single-Sided Specification (8 Corners)
	Number of Teeth	10	10
	Insert Grade	ACP200	PVD Grade
Cutting Conditions	Cutting Speed (SFM)	440	440
	Feed Rate per Tooth (IPT)	0.005	0.005
	Feed Rate (IPM)	14	14
	Axial Depth of Cut (in)	0.1	0.1
	Cutting Time	287 min	287 min
	Dry/Wet	Dry	Dry

Reduces burrs and achieves higher milling quality compared to conventional tools

		Part/ Work Material	Machine Components / 1050
Tool	Type	DGC Type	Conventional Tool
	Body	DGC13125R (ø100)	ø125
	Insert	SNET13T6ANER-G (16 Corners)	Single-Sided Specification (8 Corners)
	Number of Teeth	8	8
	Insert Grade	ACM300	PVD Grade
Cutting Conditions	Cutting Speed (SFM)	525	525
	Feed Rate per Tooth (IPT)	0.01	0.01
	Feed Rate (IPM)	37	37
	Axial Depth of Cut (in)	0.1	0.1
	Cutting Time	-	-
	Dry/Wet	Dry	Dry

Reduces tool cost by doubling the number of cutting edges

		Part/ Work Material	Machine Components / 1050
Tool	Type	DGC Type	Conventional Tool
	Body	DGC13100R (ø100)	ø100
	Insert	SNET13T6ANER-G (8 Corners)	Single-Sided Specification (4 Corners)
	Number of Teeth	5	5
	Insert Grade	ACM300	PVD Grade
Cutting Conditions	Cutting Speed (SFM)	492	492
	Feed Rate per Tooth (IPT)	0.006	0.006
	Feed Rate (IPM)	14	14
	Axial Depth of Cut (in)	0.08	0.08
	Cutting Time	-	-
	Dry/Wet	Wet	Wet

Doubles the number of cutting edges and provides over 3 times longer tool life per corner compared to conventional tools.

Recommended Cutting Conditions (SNMT/SNET)

ISO	Material	Hardness	Cutting Speed Vc (SFM) Min. - Max.	Feed Rate fz (IPT) Min. - Max.	Depth of Cut ap (inch)	Insert Grade
P	General Steel	180 to 280 HB	490 - 820	.0039 - .016	< .12	ACU2500 ACP200 ACP300

DNX(F) / DNH / DNHS

High-efficiency Face Milling Cutters for Cast Iron and Cast Steel

■ Features

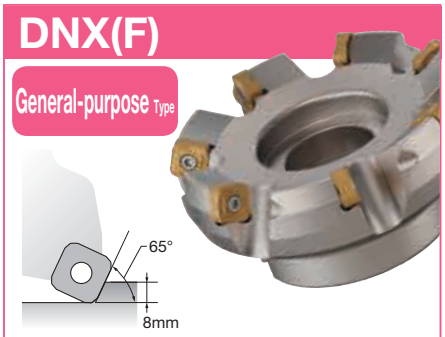
- Achieves high efficiency milling with a max. 0.31" depth of cut
- Employs negative inserts with chipbreakers that have a strong cutting edge on the double negative type body. Economical design using 8 corners
- Supports general to high-efficiency high-feed milling with three body types. Inserts can be used with all types

Negative inserts with a rake angle achieve low resistance and high feed milling

■ Product Range

DNX(F)

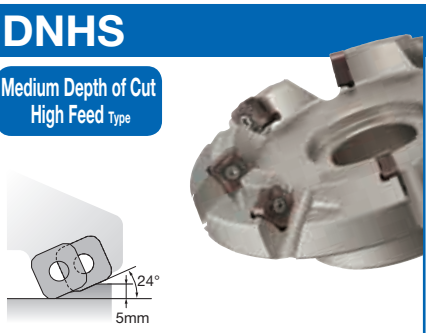
General-purpose Type



Maximum Depth of Cut		0.3"	8mm
Cutting edge angle		65°	
Cutter Dia.	DNX General-purpose type	ø3.0" to ø8.0"	ø80 to ø250mm
	DNXF General-purpose Fine-pitch Type	ø3.0" to ø8.0"	ø80 to ø160mm

DNHS

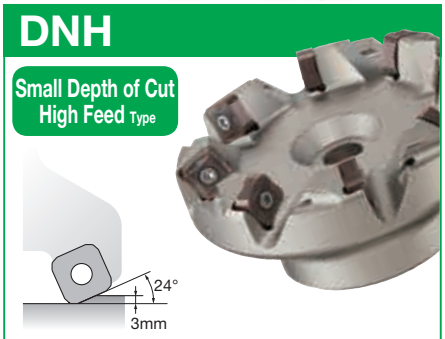
Medium Depth of Cut High Feed Type



Maximum Depth of Cut		5mm
Cutting edge angle		24°
Cutter Dia.	DNHS 12000R Medium Depth of Cut High Feed Type	ø80 to ø160mm

DNH

Small Depth of Cut High Feed Type

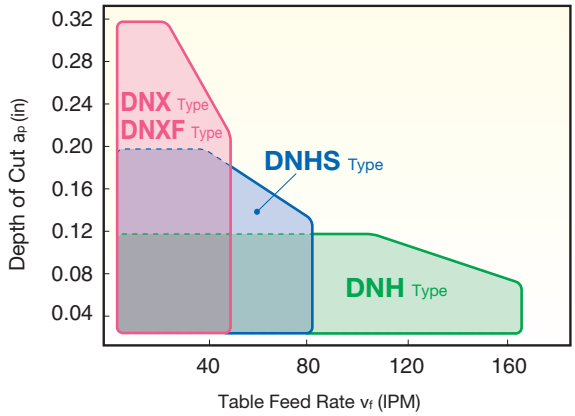


Maximum Depth of Cut		3mm
Cutting edge angle		24°
Cutter Dia.	DNH 12000R Small Depth of Cut High Feed Type	ø80 to ø160mm

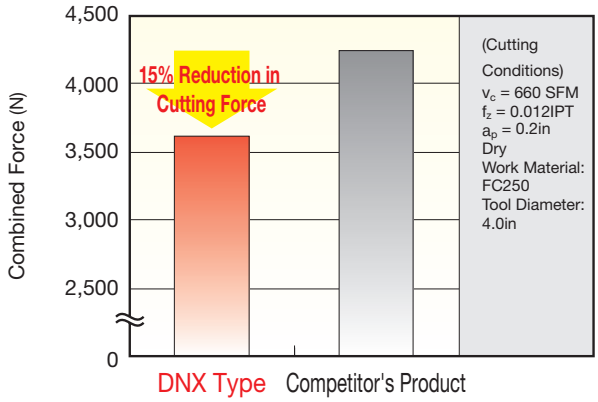
Large ← **Depth of Cut** — **Feed Rate** → Large

■ Usage Region (Cutting Cast Iron) Cut carbon steel at 20 to 30% reduction.

* The following conditions are provided as a general guide. Actual conditions will need to be adjusted according to tool overhang, machine rigidity, depth of cut and other factors.



■ Comparison of Cutting Force



■ Recommended Cutting Conditions (See page H46 for Inch Parameters)

DNX / DNXF Type

ISO	Work Material	Hardness	Cutting Speed v_c (m/min) Min. - **Optimum** - Max.	Feed Rate f_z (mm/t) Min. - **Optimum** - Max.	Insert Grade
K	Cast Iron	250HB	150-**225**-300	0.10-**0.20**-0.30	ACK200 ACK300
	Ductile Cast Iron	250HB	150-**200**-250	0.10-**0.18**-0.25	ACK200 ACK300
P	Carbon Steel	180to 280 HB	150-**175**-200	0.10-**0.15**-0.20	ACP200
	Alloy Steel	180to 280 HB	150-**175**-200	0.10-**0.15**-0.20	ACP200

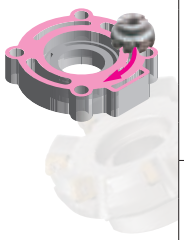
Note The cutting conditions above are a guide. Actual conditions will need to be adjusted according to machine rigidity, work clamp rigidity, depth of cut and other factors.

DNHS / DNH

ISO	Work Material	Hardness	Cutting Speed v_c (m/min) Min. - **Optimum** - Max.	Feed Rate f_z (mm/t) Min. - **Optimum** - Max.	Insert Grade
K	Cast Iron	250HB	150-**225**-300	0.10-**0.55**-1.00	ACK200 ACK300
	Ductile Cast Iron	250HB	150-**200**-250	0.10-**0.55**-1.00	ACK200 ACK300
P	Carbon Steel	180to 280 HB	150-**175**-200	0.10-**0.45**-0.80	ACP200
	Alloy Steel	180to 280 HB	150-**175**-200	0.10-**0.35**-0.60	ACP200

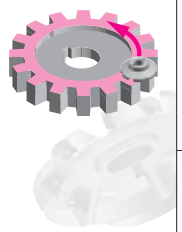
Note For DNHS Type, insert heights are alternatively placed, so the actual feed rate per tooth is double. Use with f_z = 0. 5 mm/t (actual feed rate 1.0 mm/t) as the upper limit.
The cutting conditions above are a guide. Actual conditions will need to be adjusted according to machine rigidity, work clamp rigidity, depth of cut and other factors.

■ Application Examples



Part Material		Automotive Components Grey Cast Iron	
Used Equipment		Machining Center (BT30)	
Tool	Type	DNXF Type	Conventional Tool
	Body	DNXF 43000R	Cutter for C.I.
	Insert	G Type	Negative Insert
	Tool Dia. (in)	3	3
	Number of Teeth	8	8
	Insert Grade	ACK200	K Class CVD
Cutting Conditions	Cutting Speed (SFM)	656	656
	Feed Rate per Tooth (IPT)	0.0025 (v_f = 16.5 IPM)	0.0025 (v_f = 16.5 IPM)
	Axial Depth of Cut (in)	0.06	0.06
	Cutting Width (in)	2.4	2.4
	Dry/Wet	Wet	Wet

Double the tool life of conventional tools under the same conditions.



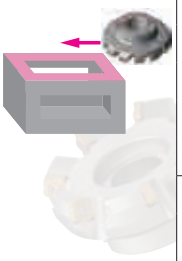
Part Material		Construction Machine Component / Cast Steel	
Used Equipment		Machining Center (BT50)	
Tool	Type	DNHS Type	Conventional Tool
	Body	DNHS 12100R	General-purpose Cutter
	Insert	H Type	Negative Insert
	Tool Dia. (mm)	100	100
	Number of Teeth	8 (4)*	7
	Insert Grade	ACP200	P Class CVD
Cutting Conditions	Cutting Speed (SFM)	560	560
	Feed Rate per Tooth (IPTt)	0.01 (v_f = 17.7 IPM)	0.003 (v_f = 11.8 IPM)
	Axial Depth of Cut (in)	0.12" to 0.16"	0.12" to 0.16"
	Cutting Width (in)	1.97	1.97
	Dry/Wet	Dry	Dry

Enables 1.5 times the efficiency of conventional tools.

*( ) indicates effective no. of teeth

Part Material		Electrical Appliance Component Grey Cast Iron	
Used Equipment		Machining Center (BT50)	
Tool	Type	DNXF Type	Conventional Tool
	Body	DNXF 44000R	Cutter for C.I.
	Insert	H Type	Negative Insert
	Tool Dia. (in)	4	4
	Number of Teeth	10	10
	Insert Grade	ACK200	K Class CVD
Cutting Conditions	Cutting Speed (SFM)	1030	1030
	Feed Rate per Tooth (IPT)	0.006 (v_f = 60 IPM)	0.004 (v_f = 43.3 IPT)
	Axial Depth of Cut (in)	0.06	0.06
	Cutting Width (in)	3	3
	Dry/Wet	Wet	Wet

1.4 times the milling efficiency and 1.3 times the tool life of conventional tools.



Part Material		Housing - Grey Cast Iron	
Used Equipment		Machining Center (BT50)	
Tool	Type	DNX Type	Conventional Tool
	Body	DNX 46000R	General-purpose Cutter
	Insert	G Type	Positive Insert
	Tool Dia. (inch)	6	6
	Number of Teeth	10	10
	Insert Grade	ACK200	K Class CVD
Cutting Conditions	Cutting Speed (SFM)	790	790
	Feed Rate per Tooth (IPT)	0.0047 (v_f = 23.5 IPM)	0.003 (v_f = 15.6 IPM)
	Axial Depth of Cut (in)	0.12	0.12
	Cutting Width (in)	5.3	5.3
	Dry/Wet	Wet	Wet

1.5 times longer tool life than conventional tools.

■ Precautions when Using Wiper Inserts with Holes

- When assembling the wiper insert, attach it as shown in Fig. 1. When attached as shown in Fig. 2, normal machined surface roughness cannot be obtained.
- Wiper inserts are single-cornered and double-sided.
- Refer to Technical Guidance page N19 in the General Catalogue for details about wiper inserts.
- Do not use with DNHS and DNH types.

MEMO

■ Features

• Supports Wide Range of Machining Operations

Applicable to various machining applications, the cutter lineup includes diameters of .500” -6.000” inch bodies (ø14 to ø160mm metric bodies), enabling large ramping angles.

• Excellent Machining Quality

A combination of optimized cutting edge design and high-precision molding technology result in superb wall surface accuracy and surface finish quality.

• Outstanding Sharpness with Low Resistance

Reduces machining noise and suppresses burrs. Lineup includes ground inserts with a focus on sharpness.

• ACU2500 General-purpose Grade for a Wide Range of Materials

Introducing the new grade ACU2500, supports machining in a wide range of applications and materials.

• WEZR - Repeater Milling

Introducing WEZR, High-efficiency shoulder milling of deep steps. Inserts for WEZR are arranged in multiple steps forming a long cutting edge, to enable high-efficiency shoulder milling of deep steps.

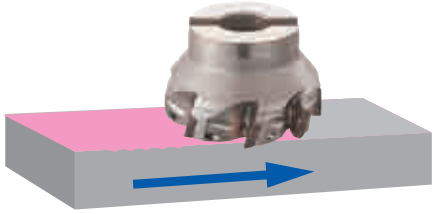
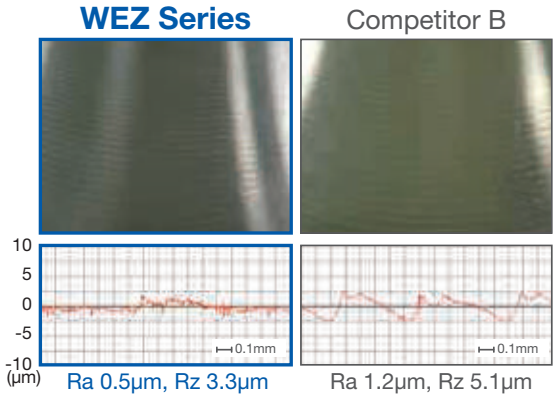
■ Outstanding Surface Quality



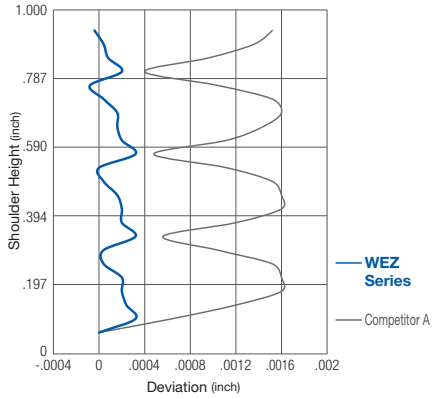
Machine: Vertical Machining Center BT50,
Part Material: 4140 Steel
Tool: WEZ 17100RS08 (ø100, 8 flutes)
Insert: AOMT 170508PEER-G (ACU2500)
Cutting conditions: v_c = 820 SFM, f_z = .006 IPT,
a_p = .079", a_e = 3.35" Dry

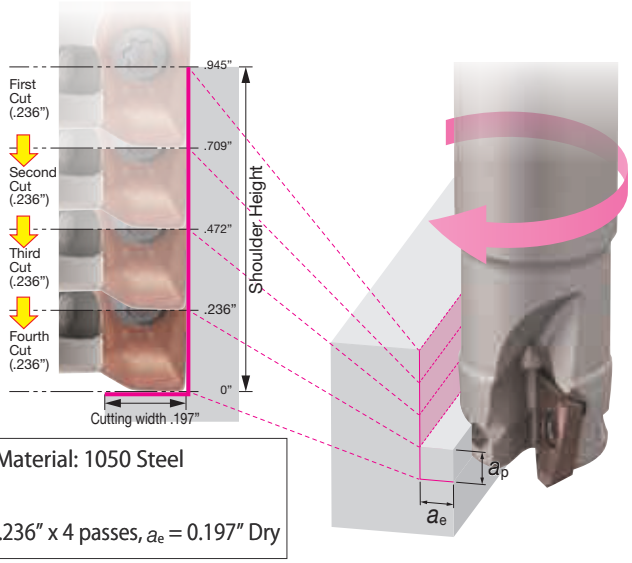


■ Insert Size Comparison

AO□T17 Type AO□T11 Type

■ Excellent Squareness

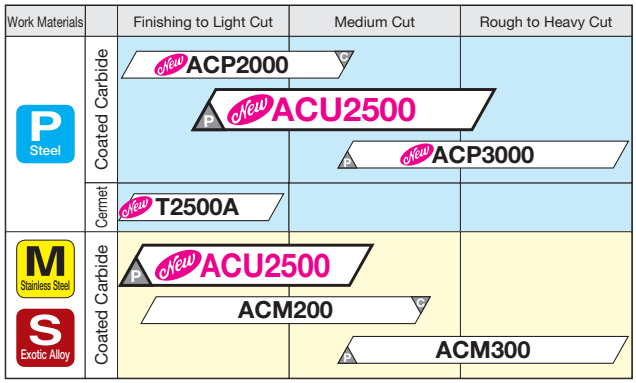


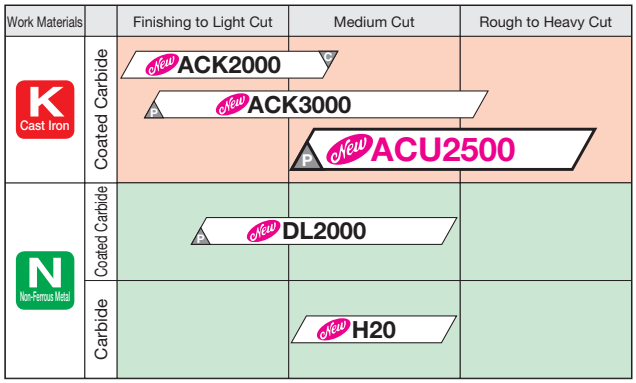


Machine: Vertical Machining Center BT40, Part Material: 1050 Steel
Tool: WEZ 11020E03 (ø20, 3 flutes)
Insert: AOMT 11T308PEER-G (ACU2500)
Cutting conditions: v_c = 500 SFM, f_z = .006 IPT, a_p = .236" x 4 passes, a_e = 0.197" Dry

■ Insert Grades Selection Guide

The WEZ Series debuts with brand new inserts grades: ACP2000, ACP3000, ACK2000, ACK3000, DL2000, H20, T2500A & ACU2500.
Highlighted by the newly developed general-purpose **ACU2500 Grade,** suitable for a wide range of materials.
Enhanced lineup of coatings in addition to carbide and cermet for milling steel, stainless steel, cast iron, exotic materials, and aluminum alloy.



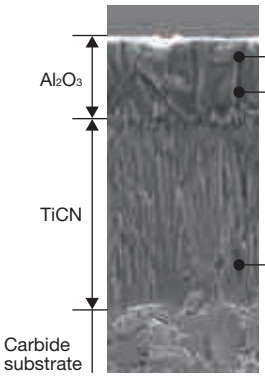


The letters "C" and "P" at the end of each grade indicate the coating type. C: CVD P: PVD

■ Coating Features

New Absotech™ (absolute technology) coating technology for absolute stability

ABSOTECH CVD



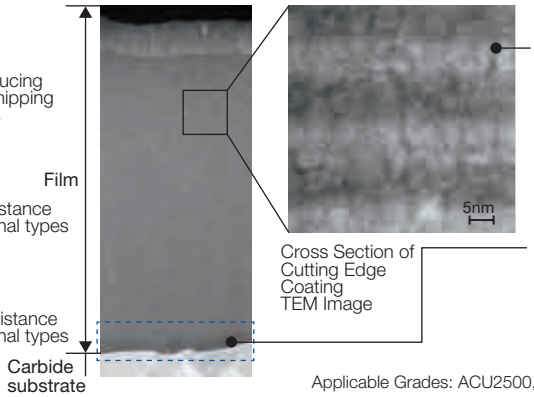
Special Surface Treatment
Suppresses thermal cracking by introducing high compressive stress, resulting in chipping resistance more than twice as good as conventional types

Crystal Orientation Control Al_2O_3
By controlling the growth direction, Al2O3 is reinforced for crater wear resistance more than twice as good as conventional types

High Hardness TiCN
Increased TiCN hardness by using a C-rich composition for flank wear resistance more than twice as good as conventional types

Applicable Grades: ACP2000, ACK2000

ABSOTECH PVD



Cross Section of Cutting Edge Coating TEM Image

New Super Multi-Layered Composition
Higher hardness and twice the conventional wear resistance due to a fine crystal structure AlTiCrBN-based nano-layered coating

High Adhesion Strength
Significantly improved coating adhesion Chipping resistance more than twice as good as conventional types

Applicable Grades: ACU2500, ACP3000, ACK3000

Work Materials	Grades	Coating Thickness (μm)	Features
P Steel, M Stainless Steel, K Cast Iron, S Exotic Allo	ACU2500	3	General-purpose grade for steel, stainless steel, and cast iron Adopts a carbide substrate with excellent fracture resistance and wear resistance, plus a new coating with excellent wear resistance and chipping resistance, realizing stable long tool life with various work materials.
P Steel	ACP2000	10	Stable long tool life in high-speed machining is acheived with a new coating and a tough carbide substrate with excellent thermal crack resistance.
	ACP3000	3	Adopts a very tough carbide substrate, plus a new coating with excellent wear resistance and chipping resistance, results in stable long tool life for wet machining of steel.
	T2500A	—	Thanks to the excellent thermal crack resistance conferred by high thermal conductivity and the improved toughness due to the finer and more uniform structure. This cermet grade produces high levels of fracture resistance and wear resistance.
M Stainless Steel, S Exotic Alloy	ACM200	6	Manages superb stability in machining of high-hardness stainless steel, due to a high-strength carbide substrate and highly wear-resistant coating.
	ACM300	3	Executes superb stability in machining of stainless steel, due to a high-strength carbide substrate and highly chipping-resistant coating.
K Cast Iron	ACK2000	10	Stable long tool life with high-speed machining of cast iron is attained by adopting a new coating with excellent thermal resistance and a tough carbide substrate.
	ACK3000	3	Utilizes a carbide substrate with excellent wear resistance, in addition to a new coating with excellent wear resistance and chipping resistance, resulting in stable long tool life in dry machining of cast iron.
N Non-Ferrous Metal	DL2000	0.5	DLC coating grade for non-ferrous metal machining with a low coefficient of friction and excellent adhesion resistance.
	H20	—	Uncoated grade for non-ferrous metal machining with excellent wear resistance and fracture resistance.

WEZR Repeater Milling Cutter

■ WEZR Repeater Milling Features

- **High-efficiency shoulder milling of deep steps**

  Inserts for WEZ are arranged in multiple steps forming a long cutting edge, to enable high-efficiency shoulder milling of deep steps

- **Excellent chatter resistance**

  Sharp inserts and irregular pitched body helps to control chatter and vibration

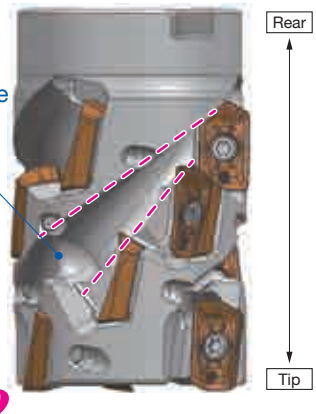
- **Support for all types of applications**

  A lineup of grades specific to each work material, as well as the general-purpose ACU2500 grade, which is applicable to most materials (steel, stainless steel and cast iron)

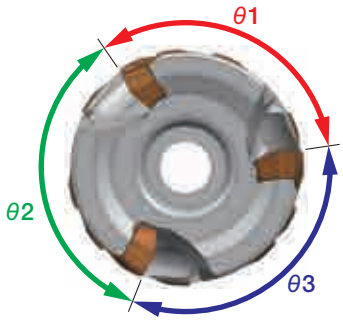
■ Body Features

- Flute shape ensures both rigidity and excellent chip evacuation performance

The chip pocket is larger toward the tip and the body is thicker toward the rear, for excellent chip evacuation and rigidity



- Irregular pitched body suppresses chattering



$\theta 1 \neq \theta 2 \neq \theta 3$

Irregular pitch is used to improve chatter resistance

■ Product Range - WEZR Repeater New

● Numbers inside are effective number of teeth

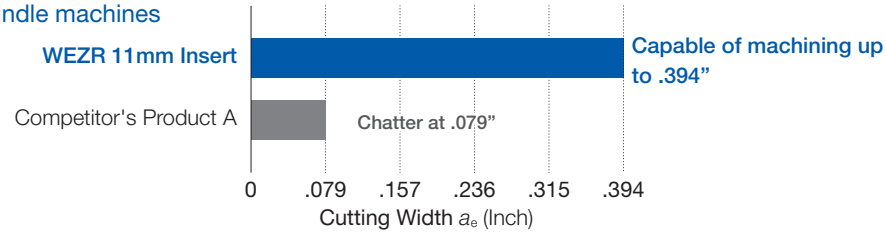
WEZR Repeater Milling Cutter

■ Cutting Performance

- Sharp inserts and irregular pitched body help provide low chatter resistance

Capable of stable machining with BT40 spindle machines

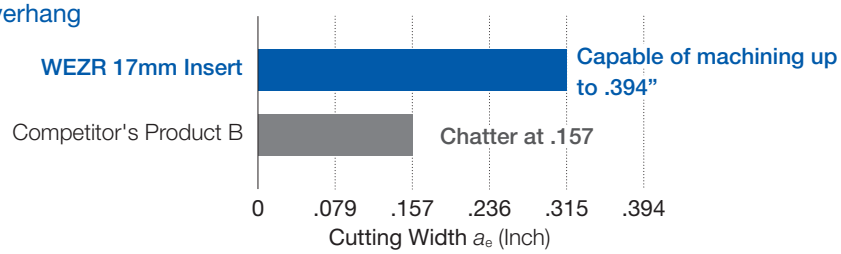
Vertical Machining Center BT40



Machine: Vertical Machining Center BT40, Part Material: 1050 Steel, Overhang amount: 2.36”
Tool: WEZR11032E3632Z03 (ø32*mm*, 3-tooth 4-step)
Insert: AOMT11T308PEER-G-ACU2500
Cutting Conditions: v_c = 500 SFM, f_z = .0039 IPR, a_p= 1.18”, Dry

Capable of stable machining with a long overhang

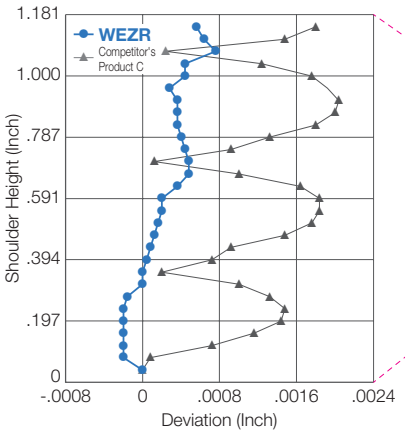
Vertical Machining Center BT50

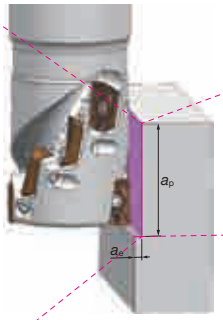


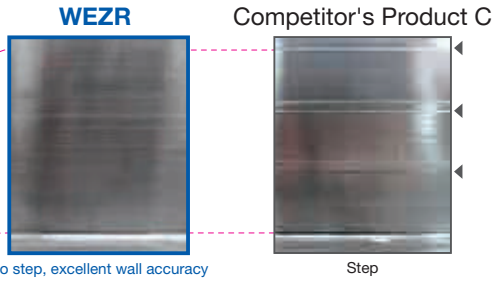
Machine: Vertical Machining Center BT50, Part Material: 4140 Steel, Overhang amount: 9.25”
Tool: WEZR 17063RS5727Z04 (*ø63mm*, 4-tooth 4-stage)
Insert: AOMT 170508PEER-G(ACU2500)
Cutting Conditions: v_c = 492 SFM, f_z = .006 IPT, a_p= 1.97”, Dry

■ Cutting Performance

Optimized cutting edge shape and high-precision molding technology help achieve excellent wall accuracy.







Machine: Vertical Machining Center BT50, Part Material: 4135 Steel, Overhang amount: 2.363”
Tool: WEZR11032E3632Z02 (ø32, 2-tooth 4-steps)
Insert: AOMT11T308PEER-G-ACU2500
Cutting Conditions: v_c = 530 SFM, f_z = .0059 IPR, a_p= 1.181”, a_e= .079”, Dry

■ Application Range Recommendation

Cutting parameters such as A_p (depth of cut) and A_e (width of cut) should be based on the operating conditions (e.g. Material, Machine Tool, Rigidity, Clamping)

Note
- The cutting conditions above are a guide. Actual conditions will need to be adjusted according to machine rigidity, work clamp rigidity, depth of cut and other factors.
- There may be cases where machining cannot be performed under recommended cutting conditions, depending on the machine rigidity and work rigidity.
- *For H20, use coolant to prevent adhesion.

	a_p (Inch)	.5905	.5905
	a_e (Inch)	.9449	.9449
	Coolant	Wet	Wet
	Results	Capable of machining at reduced cutting force, at 1.4 times the feed rate	

SEC-Modular Tool

*Made-to-Order Product

Aluminum Alloy Automotive Component		Sumitomo	Competitor's Product
Vertical Machining Center BT30	Tool	WEZR11033E4525Z03*	H's Solid Endmills
	Grade	DL2000	—
	Chipbreaker	G	—
	Cutter Dia. (*mm*)	33	32
	Number of Teeth	3×5 steps	4
	v_c (SFM)	1,600	330
	v_f (IPM)	31.50	8.82
	f_z (IPT)	.0022	.0022
	a_p (Inch)	1.000	1.000
	a_e (Inch)	.0394	.0394
	Coolant	Wet	Wet
	Results	Efficiency increased 5x or more, for reduced tool costs	

*Made-to-Order Product

Contact Sheet for Custom WEZ Milling Cutter

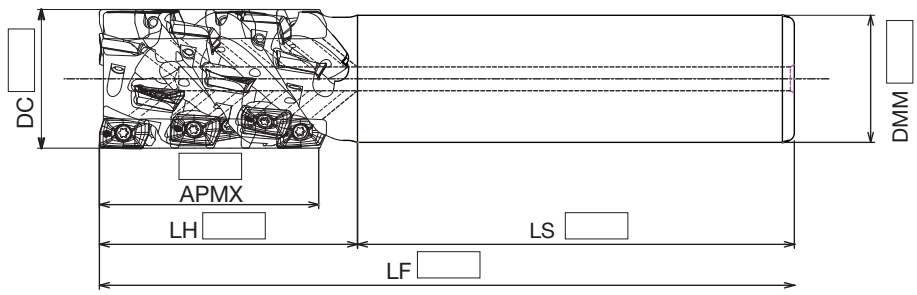
MADE TO ORDER

Fill in the ☐ with required special dimensions

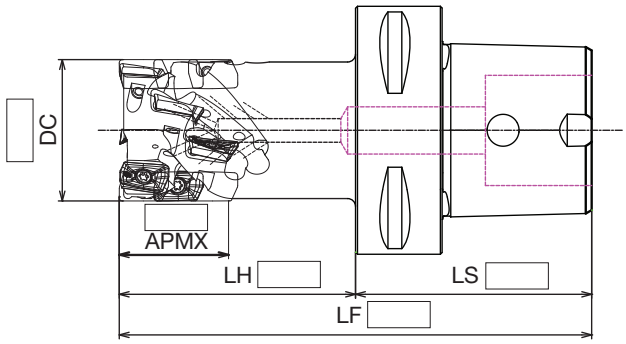
After completion, please submit to your local Sumitomo Sales Represenative or authorized distributor
Please include necessary additional information (shape, dimension, etc.)

Company Contact Information:

Shank Based on dimensions above, fill in the ☐ with required special dimensions



Polygon Shank Based on dimensions above, fill in the ☐ with required special dimensions



Shell Mill Based on dimensions above, fill in the ☐ with required special dimensions

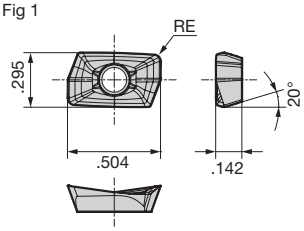

Fig 2

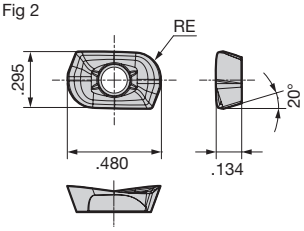

Precautions for Mounting Inserts

(1) Clean the mounting seat surface and contact parts.
(2) While pressing the insert solidly against the seat surface,tighten the screws with the included wrench.
(3) Apply Anti-seize Paste to the screws and tighten at the recommended torque.
(4) After tightening, check that there are no gaps on the seat surface.

Fig 3

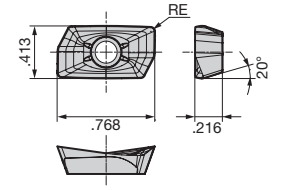

Fig 4

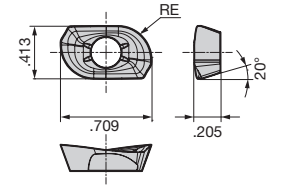

*When mounting inserts with nose radius of 3.0 or above, modification of the body is required.

Modify this edge.

Reworking guidelines
Nose radius = 3.0: C1
(AOMT11T330PEER)
Nose radius = 3.2: C1
(AOMT11T332PEER)
Standard: R1.

Small Endmill Milling Cutter for Medical and Lathe (Small Machining)

■ Features & Benefits

✓ **Version for multi-tasking machines now available**
Short shank type ideal for low-rigidity multi-tasking machines

✓ **Superb machining quality**
Shank design ideal for ER collets now has higher rigidity thanks to face contact effect, promotes excellent shoulder accuracy and finished surface quality

✓ **Abundant insert lineup**
Supports various machining with ground chipbreakers with excellent cutting edge sharpness, various nose radii, and dedicated work material grades

■ Body Product Range

Type	Type	Diameters in Stock (*mm*)

17 mm	**WEZ17025ES02-16**	●	**25**	23	16	30(29.3)	—	70(69.3)	2	0.11	1
	WEZ17032ES03-16	●	**32**	27	16	30(29.3)	—	70(69.3)	3	0.14	1

The LH and LF dimensions in parentheses are dimensions (for 11mm) using RE = 3.0/3.2 insert. When using RE = 3.0/3.2 inserts, the maximum depth of cut is 9.5. (For 17mm) RE = 5.0/6.4 insert. When using RE = 5.0/6.4 inserts, the maximum depth of cut is 14.5.
Inserts are sold separately.

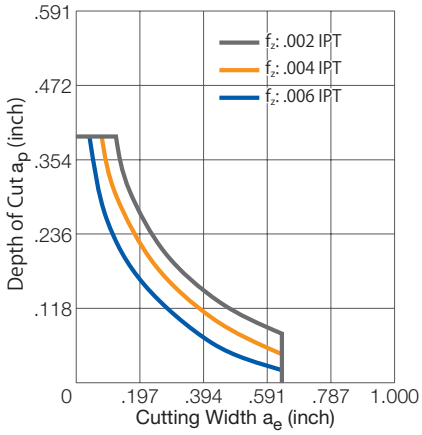
Small Endmill Milling Cutter for Medical and Lathe (Small Machining)

■Feed Rate Recommendations

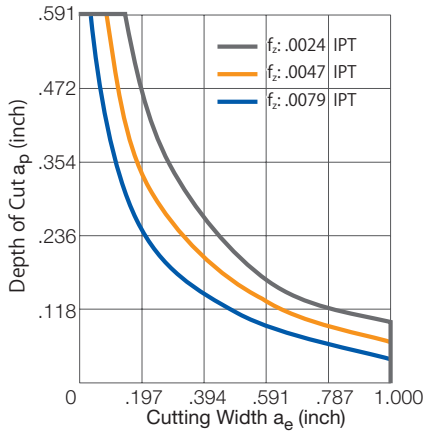
WEZ11

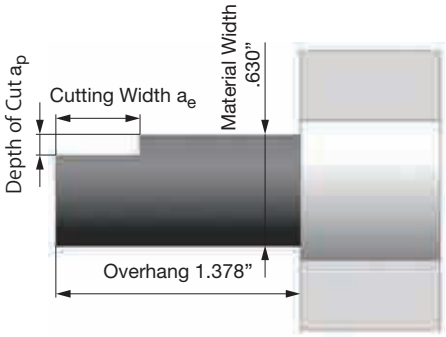
Tool: WEZ11016ES02-10
Insert: AOET11T3 ○○ PEER-F



WEZ17

Tool: WEZ17025ES02-16
Insert: AOET1705 ○○ PEER-F

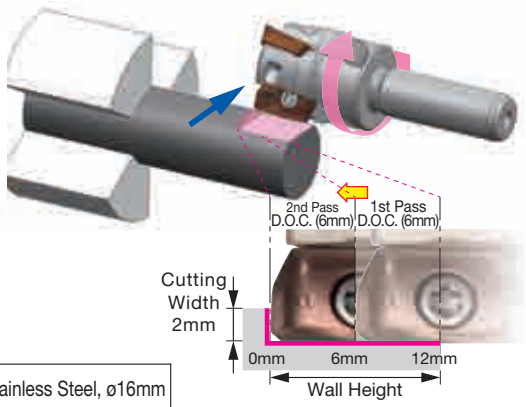


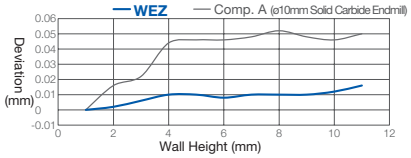


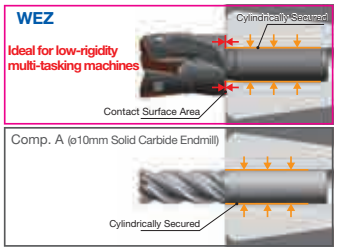
For cutting conditions by part material, see page H53. When using G type chipbreakers, set the efficiency to 80%. The recommended cutting conditions may not be practical depending on the operating conditions (e.g. machine, work material shape, clamping system).

■ Excellent Squareness

✓ WEZ presents a significant cost advantage when compared against solid carbide endmills.

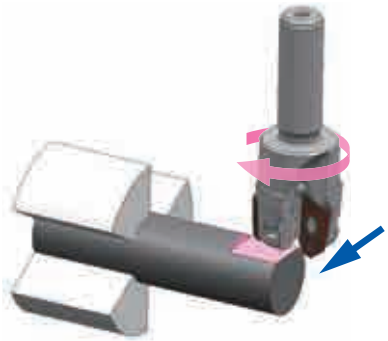




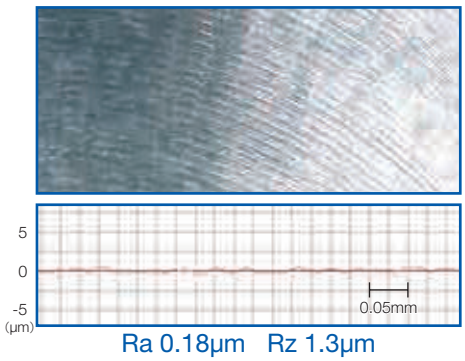


Machine: Multi-axis NC Lathe Part Material: 304 Stainless Steel, ø16mm
Tool: WEZ11020ES03-10 (ø20mm, 3 flutes)
Insert: AOET11T308PEER-F-ACU2500
Cutting Conditions: v_c = 330 SFM, f_z = .003 IPT,
a_p =.236" x 2 passes, a_e = .079"

■ Surface Quality

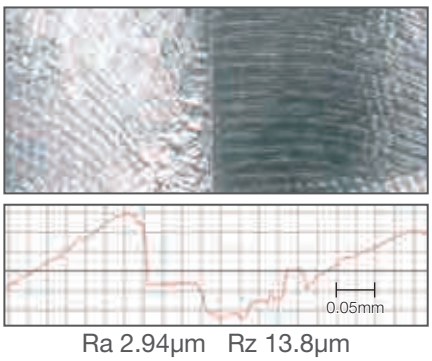


WEZ



Ra 0.18µm Rz 1.3µm

Competitor B (ø10 Solid Carbide Endmill)



Ra 2.94µm Rz 13.8µm

Machine: Compound NC Lathe Work Material: 304 Stainless Steel, ø16mm Round
Tool: WEZ11020ES03-10 (ø20mm, 3 flutes)
Insert: AOET11T308PEER-F (ACU2500)
Cutting Conditions: WEZ type, vc = 330 SFM, f_z = .002 IPT, a_p = .079", a_e = .472" Wet
Competitor's Product B: vc = 330 SFM, fz = .002 IPT, ap = .079, "ae = .236" x 2 Passes, Wet (Carbide Solid Endmill)

Larger tool diameter than carbide solid endmills enables reduced number of passes for high-efficiency machining!

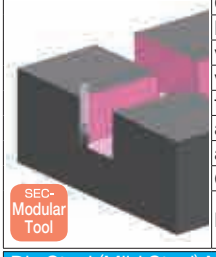
Good shoulder accuracy and machined surface quality which can eliminate a finishing pass.

■ WEZ Application Examples

1050 Steel Machine Component		Sumitomo	Competitor's Product
Vertical Machining Center BT50	Tool	WEZ17032E03	Single-Sided 2 Corners
	Grade	ACU2500	–
	Chipbreaker	G	–
	Cutter Dia. (*mm*)	*32*	*32*
	Number of Teeth	3	3
	v_c (SFM)	246	246
	v_f (IPM)	8.86	8.86
	f_z (IPT)	.004	.004
	a_p (inch)	.157	.157
	a_e (inch)	.866	.866
	Coolant	Wet	Wet
	Results	Cutting edge wear reduced drastically at same number of parts which increased tool life.	

1040 Steel Hub		Sumitomo	Competitor's Product
Vertical Machining Center BT40	Tool	WEZ17025E02	Double-sided, 4 Corners
	Grade	ACU2500	–
	Chipbreaker	G	–
	Cutter Dia. (*mm*)	*25*	*25*
	Number of Teeth	2	2
	v_c (SFM)	394	394
	v_f (IPM)	11.81	11.81
	f_z (IPT)	.0026	.0026
	a_p (inch)	.354	.354
	a_e (inch)	.197	.197
	Coolant	Wet	Wet
	Results	WEZ promoted stability with reduced cutting forces and quieter sound, which also lead to tool life improvement.	

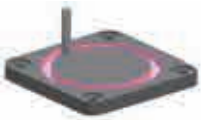
1050 Steel Machine Component		Sumitomo	Competitor's Product
5-axis Control Vertical Machining Center HSK-A100	Tool	WEZ11020M10Z3	Single-Sided, 2 Corners
	Grade	ACU2500	—
	Chipbreaker	G	—
	Cutter Dia. (*mm*)	*20*	*20*
	Number of Teeth	3	3
	v_c (SFM)	240	240
	v_f (IPM)	157.50	157.50
	f_z (IPT)	.0079	.0079
	a_p (inch)	.02	.027
	a_e (inch)	.787	.787
	Coolant	Dry	Dry
	Results	Stability improvement with reduced chatter in slot milling with a 4.72" overhang.	



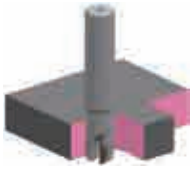
1045 Steel Machine Component		Sumitomo	Competitor's Product
Multi-tasking Machine	Tool	WEZ11025E03	Single-Sided, 2 Corners
	Grade	ACU2500	—
	Chipbreaker	G	—
	Cutter Dia. (*mm*)	25	25
	Number of Teeth	3	3
	v_c (SFM)	515	515
	v_f (IPM)	11.81	11.81
	f_z (IPT)	.0019	.0019
	a_p (inch)	.197	.197
	a_e (inch)	.138	.138
	Coolant	—	—
	Results	No chattering with excellent wall surface accuracy in a low rigidity fixture application	

Die Steel (Mild Steel) Mold Component		Sumitomo	Competitor's Product
Vertical Machining Center BT40	Tool	WEZ11020E03	Double-Sided, 4 Corners
	Grade	ACU2500	—
	Chipbreaker	H	—
	Cutter Dia. (*mm*)	*20*	*20*
	Number of Teeth	3	3
	v_c (SFM)	475	630
	v_f (IPM)	4.75	118.11
	f_z (IPT)	.0059	.1378
	a_p (inch)	.236	.012
	a_e (inch)	.236	.331
	Coolant	Dry	Dry
	Results	WEZ improved efficiency by 3x in helical milling which also improved the surface quality.	

Alloy Tool Steel L6 (45HRC) Machine Component		Sumitomo	Competitor's Product
Vertical Machining Center HSK-A63	Tool	WEZ11022E03	Single-Sided, 2 Corners
	Grade	ACU2500	—
	Chipbreaker	G	—
	Cutter Dia. (*mm*)	*22*	*22*
	Number of Teeth	3	3
	v_c (SFM)	165	100
	v_f (IPM)	8.55	5.12
	f_z (IPT)	.0039	.0039
	a_p (inch)	.118	.118
	a_e (inch)	.866	.866
	Coolant	Wet	Wet
	Results	WEZ was able to improve stable machining in 45 HRc Hardened steel	



Steel A572 Machine Component		Sumitomo	Competitor's Product
Vertical Machining Center BT50	Tool	WEZ17032EL03	Double-Sided, 2 Corners
	Grade	ACU2500	—
	Chipbreaker	G	—
	Cutter Dia. (*mm*)	*32*	*32*
	Number of Teeth	3	2
	v_c (SFM)	500	500
	v_f (IPM)	26.42	17.60
	f_z (IPT)	.0059	.0059
	a_p (inch)	.049	.049
	a_e (inch)	1.260	1.260
	Coolant	Wet	Wet
	Results	Efficiency improved 1.5x, quiet and stable machining	



1050 Steel Mold Component		Sumitomo	Competitor's Product
Ram-type Milling Machine BT40	Tool	WEZ11022E03	Double-Sided, 2 Corners
	Grade	T2500A	—
	Chipbreaker	G	—
	Cutter Dia. (*mm*)	*22*	*22*
	Number of Teeth	3	3
	v_c (SFM)	275	250
	v_f (IPM)	12.60	11.42
	f_z (IPT)	.0035	.0035
	a_p (inch)	.098	.098
	a_e (inch)	.394	.394
	Coolant	—	—
	Results	Improved machined surface quality and machining efficiency with cermet grades	

1045 Steel Machine Component		Sumitomo	Competitor's Product
Autolathe	Tool	WEZ11020ES03-10	Double-Sided, 2 Corners
	Grade	ACU2500	—
	Chipbreaker	G	—
	Cutter Dia. (*mm*)	*20*	*20*
	Number of Teeth	3	3
	v_c (SFM)	825	630

	Cutter Dia. (*mm*)	*32*	*32*
	Number of Teeth	3	3
	v_c (SFM)	725	530
	v_f (IPM)	69.69	65.75
	f_z (IPT)	.0106	.0138
	a_p (inch)	.118	.118
	a_e (inch)	.472	.472
	Coolant	Wet	Wet
	Results	High-rigidity and less chattering throughout facing operation.	

■ WEZ Application Examples

304 Stainless Steel Semiconductor Device	Sumitomo	Competitor's Product
Horizontal Machining Center BT50		
Tool	WEZ17050RS05	Double-Sided, 4 Corners
Grade	ACU2500	—
Chipbreaker	G	—
Cutter Dia. (*mm*)	*50*	*50*
Number of Teeth	5	5
v_c (SFM)	265	265
v_f (IPM)	320	320
f_z (IPT)	12.60	12.60
a_p (inch)	.0079	.0079
a_e (inch)	1.575	1.575
Coolant	Wet	Wet
Results	Improved surface finish quality and reduced burrs, cutting post-processing time by 50%	

Duplex Stainless Steel Machine Component	Sumitomo	Competitor's Product
Multi-tasking Machine		
Tool	WEZ11025ES02-16*	Double-Sided, 2 Corners
Grade	ACU2500	-
Chipbreaker	F	-
Cutting Dia.(*mm*)	*25*	*25*
# of Teeth	2	2
v_c (SFM)	300	300
v_f (IPM)	12	12
f_z (IPT)	.005	.005
a_p(inch)	.059	.059
a_e(inch)	1.000	1.000
Coolant	Wet	Wet
Results * Made-to-Order Product	Eliminates burrs to extend tool life 1.6x	

304 Stainless Steel Machine Component	Sumitomo	Competitor's Product
Vertical Machining Center BT40		
Tool	WEZ11028E04	–
Grade	ACU2500	–
Chipbreaker	G	–
Cutter Dia. (*mm*)	*28*	*28*
Number of Teeth	4	4
v_c (SFM)	500	500
v_f (IPM)	53.15	53.15
f_z (IPT)	.0079	.0079
a_p (inch)	.079	.079
a_e (inch)	.394	.394
Coolant	Dry	Dry
Results	Tool life increased. Stable machining achieved.	

304 Stainless Steel Machine Component	Sumitomo	Competitor's Product
Vertical Machining Center BT30		
Tool	WEZ11020E03	Double-Sided, 2 Corners
Grade	ACU2500	—
Chipbreaker	G	—
Cutter Dia. (*mm*)	*20*	*20*
Number of Teeth	3	3
v_c (SFM)	500	500

f_z (IPT)	.0047	.0035
a_p (inch)	.020	.020
a_e (inch)	.787	.787
Coolant	—	—
Results	Improved machined surface quality and machining efficiency with cermet grades	

304 Stainless Steel Machine Component	Sumitomo	Competitor's Product
Vertical Machining Center BT30		
Tool	WEZ11020E03	H's (High Speed Steel) Roughing Endmill
Grade	ACU2500	—
Chipbreaker	G	—
Cutter Dia. (*mm*)	*20*	*20*
Number of Teeth	3	4
v_c (SFM)	500	200
v_f (IPM)	33.85	13.40
f_z (IPT)	.0047	.0035
a_p (inch)	.079	.079
a_e (inch)	.315	.315
Coolant	—	—
Results	Longer tool life with reduced machining time as compared to using HSS endmills	

■ WEZ Application Examples

Ductile Cast Iron Straight Rail		Sumitomo	Competitor's Product
Vertical Machining Center BT50	Tool	WEZ17040EL03	Double-Sided, 2 Corners
	Grade	ACU2500	—
	Chipbreaker	G	—
	Cutter Dia. (*mm*)	*40*	*40*
	Number of Teeth	3	3
	v_c (SFM)	430	430
	v_f (IPM)	18.31	18.31
	f_z (IPT)	.0059	.0059
	a_p (inch)	.315	.236
	a_e (inch)	1.575	1.575
	Coolant	Dry	Dry
	Results	Reduces vibration during machining with 1.3 times the efficiency	

Ductile Cast Iron Machine Component		Sumitomo	Competitor's Product
Vertical Machining Center BT40	Tool	WEZ11050E05	Double-Sided, 2 Corners
	Grade	ACU2500	—
	Chipbreaker	F	—
	Cutter Dia. (*mm*)	*50*	*50*
	Number of Teeth	5	5
	v_c (SFM)	520	310
	v_f (IPM)	11.81	10.63
	f_z (IPT)	.002	.003
	a_p (inch)	.047	.047
	a_e (inch)	.394	.394
	Coolant	Wet	Wet
	Results	Optimized sharpness ensured chatter control, promoted increased efficiency and improved surface finish.	

Gray Cast Iron Machine Component		Sumitomo	Competitor's Product
Vertical Machining Center BT50	Tool	WEZ17063RS06	Double-Sided, 2 Corners
	Grade	ACK3000	—
	Chipbreaker	G	—
	Cutter Dia. (*mm*)	*63*	*63*
	Number of Teeth	6	4
	v_c (SFM)	500	575
	v_f (IPM)	14.85	10.00
	f_z (IPT)	.003	.002
	a_p (inch)	.138	.138
	a_e (inch)	2.000	2.000
	Coolant	Wet	Wet
	Results	Efficiency improved 1.5x in helical milling Tool life doubled	

Gray Cast Iron Mounting Base Frame		Sumitomo	Competitor's Product
Vertical Machining Center BT50	Tool	WEZ11032E05	Double-Sided, 2 Corners
	Grade	ACK3000	–
	Chipbreaker	G	–
	Cutter Dia. (*mm*)	*32*	*32*
	Number of Teeth	5	4
	v_c (SFM)	722	722
	v_f (IPM)	43	43
	f_z (IPT)	.004	.004
	a_p (inch)	.079	.079
	a_e (inch)	.787	.787
	Coolant	Dry	Dry
	Results	Efficiency increased. WEZ was able to machine thin areas without chatter.	

Gray Cast Iron Machine Component		Sumitomo	Competitor's Product
Horizontal Machining Center BT50	Tool	WEZ11050RS07	Double-Sided, 2 Corners
	Grade	ACU2500	–
	Chipbreaker	G	–
	Cutter Dia. (*mm*)	*50*	*50*
	Number of Teeth	7	5
	v_c (SFM)	591	591
	v_f (IPM)	31.69	31.69
	f_z (IPT)	.004	.004
	a_p (inch)	.012	.012
	a_e (inch)	.394	.394
	Coolant	Wet	Wet
	Results	WEZ provided quiet cutting pass with efficiency improvement for a finish quality with 3um parallelism and 4um flatness.	

Gray Cast Iron Table		Sumitomo	Competitor's Product
5-axis Control Vertical Machining Center HSK-A63	Tool	WEZ11040E06	–
	Grade	ACU2500	–
	Chipbreaker	G	–
	Cutter Dia. (*mm*)	*40*	*40*
	Number of Teeth	6	6
	v_c (SFM)	656	656
	v_f (IPM)	51.18	51.18
	f_z (IPT)	.005	.005
	a_p (inch)	.004	.004
	a_e (inch)	.787	.787
	Coolant	Wet	Wet
	Results	Stable machining is possible for thin workpieces or low-rigidity machines.	

Cast Steel for Welded Structure Product SCW480 Press Housing		Sumitomo	Competitor's Product
Double Column 5-axis Machining Center BT50	Tool	WEZ17160R08	Double-Sided, 2 Corners
	Grade	ACU2500	—
	Chipbreaker	G	—
	Cutter Dia. (*mm*)	*60*	*60*
	Number of Teeth	8	8
	v_c (SFM)	500	500
	v_f (IPM)	19.69	19.69
	f_z (IPT)	.008	.008
	a_p (inch)	.275	.275
	a_e (inch)	2.953	2.953
	Coolant	—	—
	Results	Reduces chipping on large workpieces, enabling stable machining	

Gray Cast Iron Railway Component		Sumitomo	Competitor's Product
Vertical Machining Center	Tool	WEZ11040M16Z6	Double-Sided, 4 Corners
	Grade	ACK3000	—
	Chipbreaker	G	—
	Cutter Dia. (*mm*)	*40*	*40*
	Number of Teeth	6	3
	v_c (SFM)	122	160
	v_f (IPM)	27.83	13.54
	f_z (IPT)	.016	.012
	a_p (inch)	.098 x 1 pass + 1	.059 x 2 passes + 0.5
	a_e (inch)	—	—
	Coolant	Wet	Wet
	Results	Increased cutting edge sharpness enables stable machining with efficiency improved 4.5x	

SEC-Modular Tool

■ WEZ Application Examples

Aluminum Alloy A2025 Machine Component	Sumitomo	Competitor's Product
Vertical Machining Center BT40		
Tool	WEZ17063RS04	Double-Sided, 2 Corners
Grade	H20	—
Chipbreaker	S	—
Cutting Dia.(*mm*)	*63*	*63*
# of Teeth	4	4

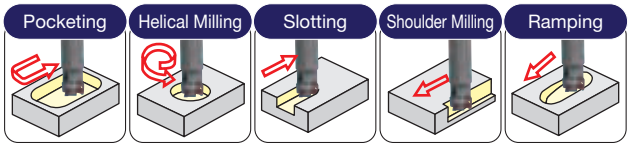
a_e(inch)	.689	.689
Coolant	Wet	Wet
Results	Tool life improved	

■ General Features

An insert with a strong cutting edge design coupled with a high rigidity body, for stable and high efficiency milling with low resistance. The improved body and insert accuracy provides high accuracy and smooth surface finish, supporting various machining with a selection of 6 types of chipbreakers and 9 milling grades.

Compatible with Wide Range of Milling

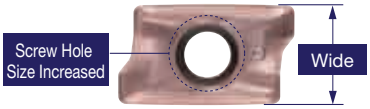


■ Features

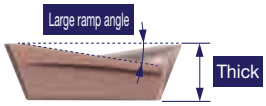
Higher Accuracy Cutting Edge with Both Sharpness and Cutting Edge Strength

Unique curved cutting edge design lowers cutting force yet improves cutting edge strength. Achieves high quality machined surface with high precision cutting edge.
Smooth deep groove milling even with low-rigidity machines

High-precision Curved Cutting Edge



High Rake Wave Cutting Edge



Coolant Holes are a Standard Feature for the Whole Series

Improved chip evacuation with air or coolant supply.

Highly Durable Body

Special surface treatment improves corrosion resistance and scratch resistance.
Increased screw size improves clamping force and durability

WEX1000 Series

Fine-pitched and high efficiency milling is possible at a small machining cost.

Wide Variety of Inserts

6 types of chipbreakers and 9 milling grades available for a wide range of applications and work materials

ø12mm	3	2	—
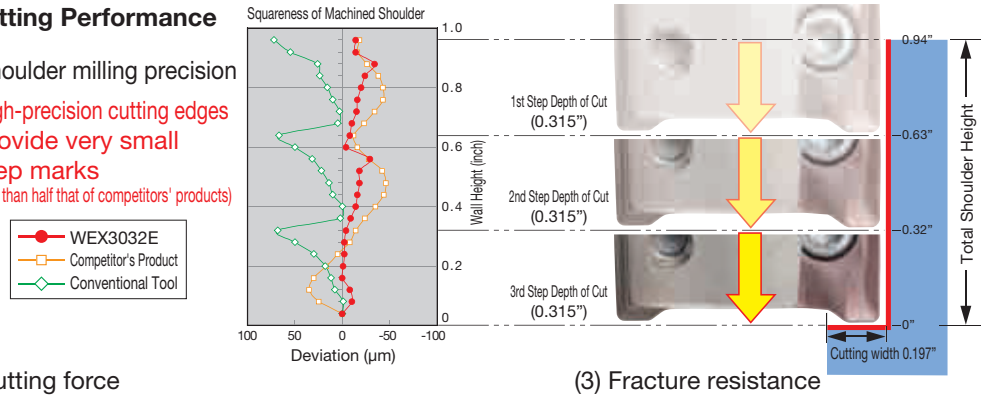
ø14mm	3	3	1

■ Cutting Performance

(1) Shoulder milling precision

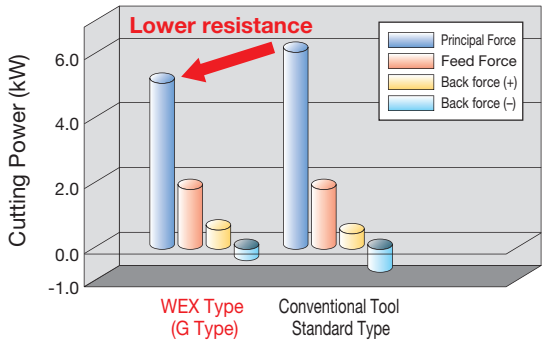
High-precision cutting edges provide very small step marks
(less than half that of competitors' products)



Cutting Conditions
Part Material: A36
Tool: WEX3032E (ø32)
Insert: AXMT170508PEER-G
Grade: ACP200
Cutting Speed: v_c=492 SFM
Feed Rate: f_z=0.006 IPT (v_f=26.57 IPM)
Cutting Width: a_e=0.197"
Depth of Cut: a_p=0.315" x 3 times
Dry

(2) Cutting force

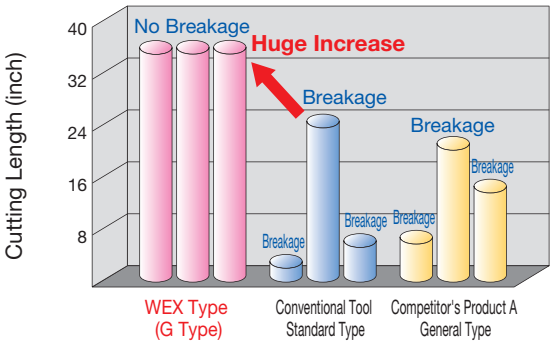
Cutting force (principal force) is approximately 15% lower than conventional tools



Cutting Conditions
Part Material: 1050
Tool: WEX3032E (ø32)
Insert: AXMT170508PEER-G
Grade: ACP200
Cutting Speed: v_c=656 SFM
Feed Rate: f_z=0.008" IPT (v_f=47 IPM)
Cutting Width: a_e=0.315"
Depth of Cut: a_p=0.40" , Dry

(3) Fracture resistance

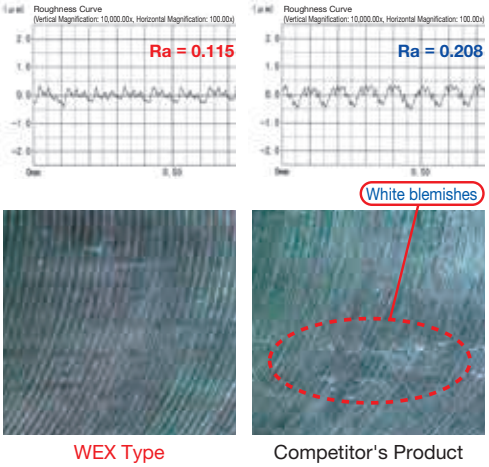
Huge increase in fracture resistance with improved cutting edge strength



Cutting Conditions
Part Material: 4140
Tool: WEX3032E (ø32)
Insert: AXMT170508PEER-G
Grade: ACP200
Cutting Speed: v_c=328 SFM
Feed Rate: f_z=0.016" IPT (v_f=49.6 IPM)
Cutting Width: a_e=0.984"
Depth of Cut: a_p=0.12, Dry

(4) Surface roughness (aluminum alloy milling)

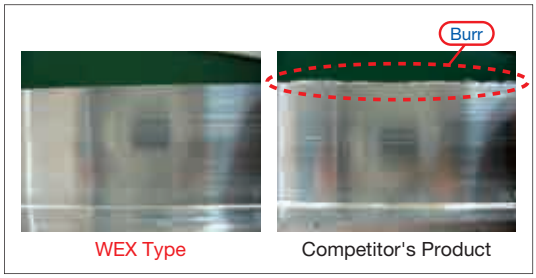
Smooth surface finish free of white blemishes



Cutting Conditions
Work Material: A5052
Tool: WEX3032E (ø32)
Insert: AXET170504PEFR-S (H1)
Cutting Speed: v_c=2,625 SFM
Feed Rate: f_z=0.004" IPT (v_f=94.5" IPM)
Cutting Width: a_e=0.63"
Depth of Cut: a_p=0.40" , Dry

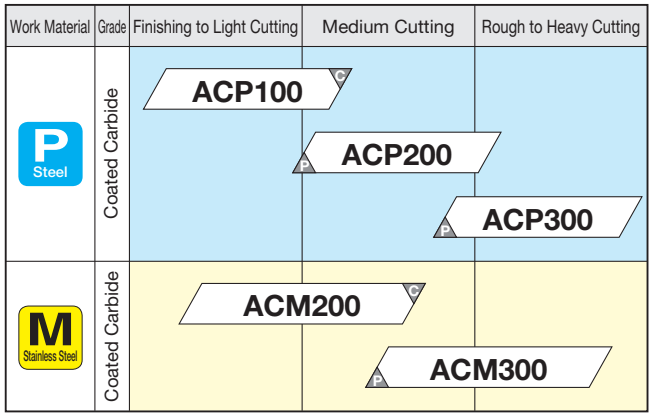
(5) Wall surface burrs (aluminum alloy milling)

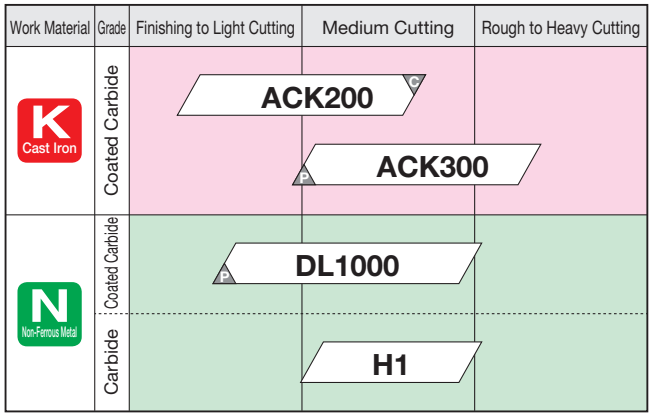
High rake edge significantly reduces burrs.



Cutting Conditions
Part Material: A5052
Tool: WEX3032E (ø32)
Insert: AXET170504PEFR-S (H1)
Cutting Speed: v_c=2,625 SFM
Feed Rate: f_z=0.004" IPT (v_f=94.5" IPM)
Cutting Width: a_e=0.197"
Depth of Cut: a_p=0.472" , Dry

■ Grade Application Range





The letters "C" and "P" at the end of each grade indicate the coating type. C: CVD, P: PVD, Blank: Uncoated

■ Chipbreaker Lineup

Work Material	P K			M S		N
	L Type	G Type	H Type	E Type	EH Type	S Type
Chipbreaker						
Features	Low Cutting Force	General-purpose Type	High Strength Type	General-Purpose Type For Exotic Alloys	Strong Edge Type For Exotic Alloys	High Rake Type
1000 Series Cross Section	25°	25°	 15°	–	–	 25°
2000 Series Cross Section	–	28°	20°	17°	 17°	 27°
3000 Series Cross Section	25°	20°	 5°	 14°	 8°	 30°
Applications	Light Cutting, Low Rigidity Milling and Reduction of Burrs	**Main Chipbreakers** General-purpose to Interrupted Milling	Roughing, Heavy Interrupted Cutting and Hardened Steel Milling	Light Cutting to General Purpose	Heavy Interrupted Machining	For Aluminum Alloy and Non-Ferrous Metal

● The recommended cutting conditions may not be practical depending on the operating conditions (e.g. machine, workpiece shape, clamping system).
● For groove milling, adjust the feed rate to around 70% of the above values.

Note The cutting conditions above are a guide. Actual conditions will need to be adjusted according to machine rigidity, work clamp rigidity, depth of cut and other factors.

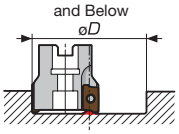
Note The cutting conditions above are a guide. Actual conditions will need to be adjusted according to machine rigidity, work clamp rigidity, cutting depth, and other factors.

■ Recommended Values for Helical Milling and Ramping

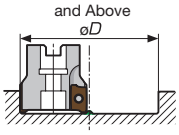
Precautions for Helical Milling

For Minimum Diameter and Below



Center uncut portion cannot be removed by traverse cutting with the same cutter

For Maximum Diameter and Above



Center uncut portion can be removed by traverse cutting with the same cutter

Precautions for Ramping

Use at the RMPX below or lower

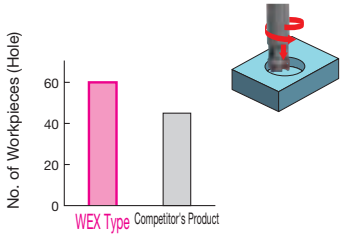
The above table shows the recommended values for 0.8mm nose radius bits.

■ Application Examples

• Machine Components 304 Stainless

WEX1000

The WEX type achieves 1.3x longer tool life for helical milling compared to competitors' products.



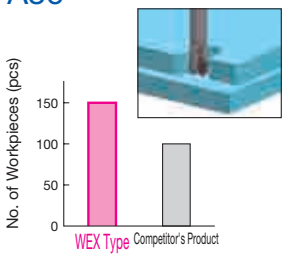
Tool: WEX1020E (ø20)
Insert: AXMT060204PDER-G
Grade: ACM300
Machine: Vertical machining centre BT30

(Cutting Conditions)
v_c=197 SFM
f_z =0.007" IPT
a_p=0.04"
Dry

• Machine Components A36

WEX1000

The WEX type has low cutting force and enables stable machining, while competitors' products have unstable power.
Achieves 1.5x longer tool life than competitors' products.



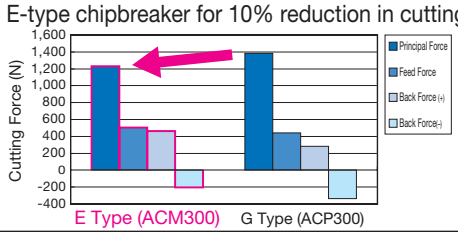
Tool: WEX1010EL (ø10)
Insert: AXMT060204PDER-L
Grade: ACP200
Machine: Vertical machining centre BT40

(Cutting Conditions)
v_c=525 SFM
f_z =0.003" IPT
a_p=0.197"
Dry

• Block Material 316 Stainless

WEX2000

Using an E-type chipbreaker for 10% reduction in cutting force.



Tool: WEX2050F (ø50)
Insert: AXMT123508PEER-E
Grade: ACM300

(Cutting Conditions)
v_c=591 SFM
f_z =0.006" IPT
a_e=0.787"
a_p=0.12" Dry

• Block Material 4140

WEX3000

Compared to competitors', the machined surface has fewer steps, enabling finishing without changing tool.

Tool: WEX3032E (ø32)
Insert: AXMT170508PEER-G
Grade: ACP200

(Cutting Conditions)
v_c=656 SFM
f_z =0.006" IPT
a_e=0.197"
a_p=0.40" x 3 Times Dry

• Die Parts, Low Carbon Steel

WEX3000

The WEX type doubles the tool life of conventional tools by performing for longer without breakage.

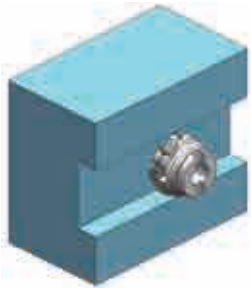
Tool: WEX3032E (ø32)
Insert: AXMT170508PEER-G
Grade: ACP100

(Cutting Conditions)
v_c=495 SFM
f_z =0.008" IPT
a_e=0.984"
a_p=0.197" Wet

• Extrusion Mold P5 Tool Steel

WEX3000

Less cutting noise than conventional tools and excellent chip evacuation for stable cutting even if the cutting conditions are doubled.
Achieves a nice glossy machined surface.



Tool: WEX3080R (ø80)
Insert: AXMT170508PEER-G
Grade: ACP200

(Cutting Conditions)
v_c=246 SFM
f_z =0.0075" IPT
a_e=3.15"
a_p=0.197" Dry

• Machine Components 304 Stainless Steel

WEX3000

Cutting Distance: 177" | Cutting Distance: 65"

WEX Type (ACM300) | WEX Type (ACP300) | Competitor's Product A | Competitor's Product B

The substrate has excellent fracture resistance and the high hardness coating enables stable machining without breakage.

Tool: WEX3032E (ø32)
Insert: AXMT170508PEER-E
Grade: ACM300

(Cutting Conditions)
v_c=492 SFM
f_z =0.006" IPT
a_e=0.40"
a_p=0.12"
Dry

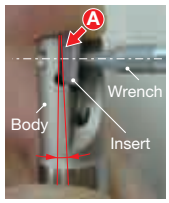
Cutter Series | Insert Size | Dia. | Metric Bore

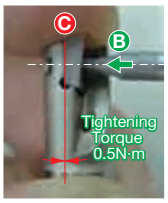
Precautions when Mounting WEX1000 Inserts

1



Press the top of the insert in the direction of A.

2



Hold down as shown in C so that there is no gap between the insert bottom and base of insert pocket, and tighten with wrench B (tightening torque 0.5N·m)

A dedicated torque wrench is optionally available (sold separately).

N·m Recommended Tightening Torque (N·m)

Parts

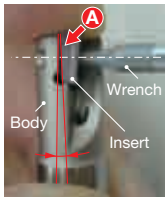
(Sold Separately)

Applicable Cutter	Flat Screw		Wrench	Anti-seizure Cream	Torque Wrench
		N·m			0.5N·m
WEX1010E(EL) to WEX1025E	BFTX01804IP	0.5	TRX06IP	SUMI-P	TRDR06IP05

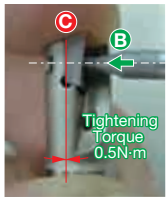
Precautions when Mounting WEX1000 Inserts

1



Press the top of the insert in the direction of A.

2



Hold down as shown in C so that there is no gap between the insert bottom and base of insert pocket, and tighten with wrench B (tightening torque 0.5N·m)

A dedicated torque wrench is optionally available (sold separately).

High Efficiency Shoulder Milling of Deep Steps

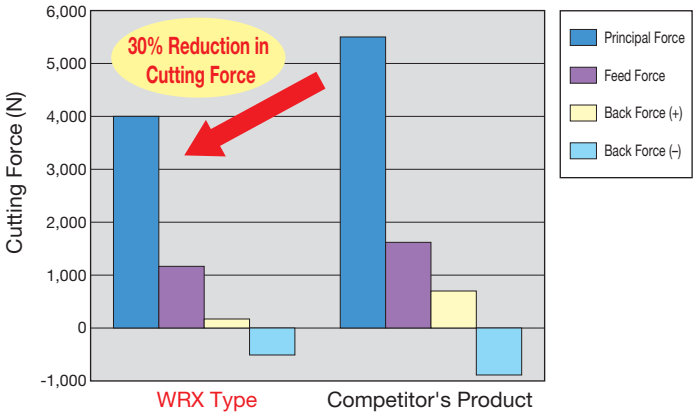
■ General Features

The WRX is an endmill that features cutting edges arranged in a repeater configuration. Its long cutting edges are arranged in multiple stages to enable high efficiency shoulder milling of deep steps.

■ Features

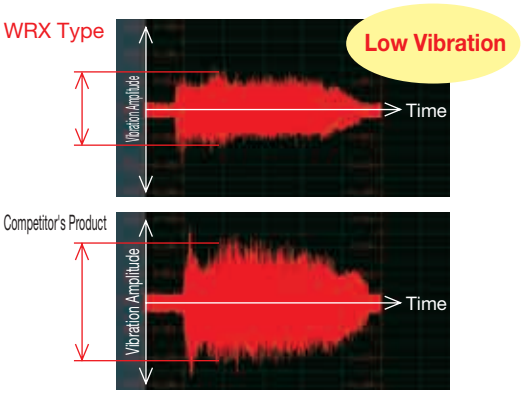
- Cutting edge positions are optimised to provide low resistance and low vibration

■ Comparison of Cutting Force



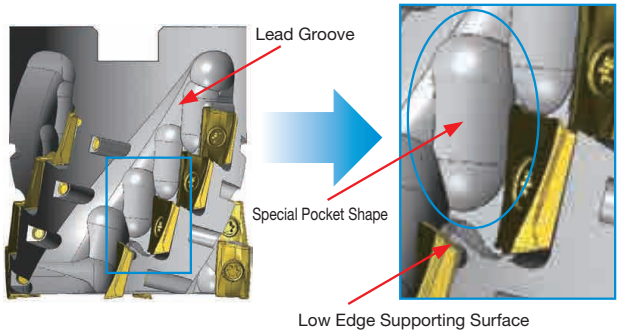
Cutting Conditions
Work Material: 1050
Tool: WRX2025E2725
Cutting Speed: v_c=330 SFM, f_z=0.006 IPT, a_e=0.4in, a_p=1.0in, Dry

■ Comparison of Vibration



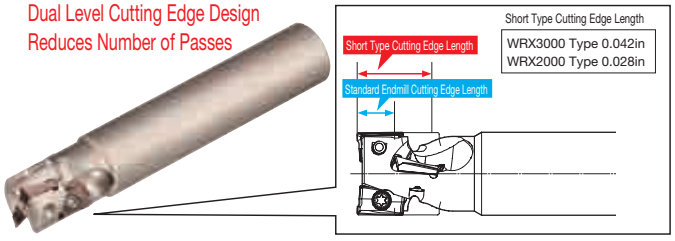
Cutting Conditions
Work Material: 1050
Tool: WRX3080RS5332
Cutting Speed: v_c=492 SFM, f_z=0.008 IPT, a_e=0.2in, a_p=1.6in, Dry

- Lead groove and special pocket shape provide smooth chip evacuation and high body rigidity
- Low edge supporting face reduces bottom edge breakage and provides high reliability



Short Cutting Head Series

Dual Level Cutting Edge Design
Reduces Number of Passes



■ Product Range - Inch

Type	Series Code	Cutting Edge Length (in.)	Dia. (in.)	Shape	Applicable Insert (*)
Shank Type	WRX2000E	1.5 - 2.126	ø1.0 to ø1.5	Weldon	AXMT1235
	WRX3000E	2.500	ø2.00		AXMT1705
Shell Type	WRX2300R	2.50 - 3.00	ø2.500 to ø3.00	Shellmill	

■ Product Range- Metric

Cutting Edge	Series Code	Cutting Edge Length (mm)	Dia. (mm)	Shape	Applicable Insert (*)
Standard Type	WRX2000E	27 to 36	ø20 to ø40	Shank	AXMT1235
	WRX2000R	36	ø40 to ø50	Mounting Hole	
	WRX3000E	40 to 53	ø40 to ø50	Shank	AXMT1705
	WRX3000R	53	ø50 to ø100	Mounting Hole	
Short Cutting Edge Type	WRX2000E	18	ø20 to ø40	Shank	AXMT1235
	WRX2000R		ø40 to ø50	Mounting Hole	
	WRX3000E	27	ø40 to ø50	Shank	AXMT1705
	WRX3000R		ø50 to ø100	Mounting Hole	

* Applicable inserts are common with the popular WEX type SEC-WaveMill

■ Recommended Cutting Conditions

WRX2000

Tool: WRX2040E3642, Insert: AXMT123504PEER

Cutting Conditions: Depth of Cut a_p=1.18in, Width of Cut a_e=0.315in, Dry

Cutting Width a_e=0.3in
Depth of Cut a_p=1.2in

● The recommended cutting conditions may not be practical depending on the operating conditions (e.g. machine, workpiece shape, clamping system).

Note The cutting conditions above are a guide. Actual conditions will need to be adjusted according to machine rigidity, work clamp rigidity, depth of cut and other factors.

Inserts are sold separately. Check the pilot diameter (DCB) when selecting the cutter.

For securing the ø80mm and ø100mm cutters to the arbors marked with *, use a JIS B1176 hexagonal socket bolt (ø80: M12 x 30 to 35mm, ø100: M16 x 40 to 45mm).

■ Features

- Ideal for machining titanium alloys for aerospace
  Designed for machining at large ramping angles, coupled with a selection of corner radii, makes it applicable for a variety of applications including titanium structural parts
- Stable and long tool life in machining titanium alloys
  The optimized cutting edge shape together with newly developed ACS2500/ACS3000 grades (for machining exotic alloys) result in excellent wear resistance and fracture resistance
- Optimized cutting edge shape and chip pocket for excellent chip evacuation

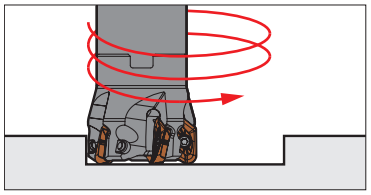
	0.8	4.85	0.46	4.65	0.39	4.25	0.10

Precautions for Helical Milling



Helical Milling

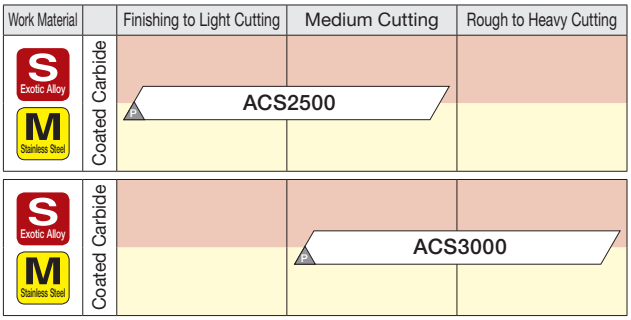
- For helical milling, if the work diameter is smaller than the standard diameter, there will be a center uncut portion.
- A prepared center hole should be made.
- Above the standard diameter, this portion can be removed by traverse cutting with the same cutter.

■ Grade Features

Work Material	Grade	Coating Thickness (μm)	Features
S Exotic Alloy / M Stainless Steel	ACS2500	3	Carbide substrate with excellent wear and adhesion resistance, coupled with a chipping resistant coating, provide outstanding performance especially in machining titanium alloys
	ACS3000	3	High toughness carbide substrate and a coating with excellent chipping resistance provide outstanding stability when machining titanium alloys, heat-resistant alloys or stainless steel

■ Grade Application Range

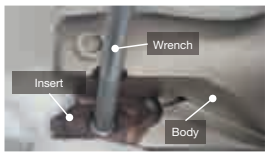
The newly developed ACS2500/ACS3000 grades ideal for machining titanium alloys, heat-resistant alloys and stainless steel are now available!



■ Chipbreaker Shape

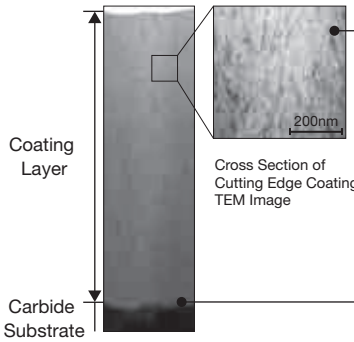
Work Material	M Stainless Steel, S Exotic Alloy
Applications	General-purpose to Roughing
Features	Standard
Chipbreaker	E
Cutting Edge Cross Section	
Precautions for Mounting Inserts

(1) Clean the mounting seat surface and contact parts.
(2) While pressing the insert firmly against the seat surface, tighten the screws with the included wrench.
(3) Apply Anti-seizure Cream to the screws and tighten at the recommended torque.
(4) After tightening, check that there are no gaps on the seat surface.



New PVD Coating Layer Features

ABSOTECH PVD



Ultra-fine Grained B Additive
- New AlTiBN coating, with an ultra-fine coating structure, achieves high strength and toughness
- Outstanding chipping resistance and wear resistance

High Adhesion Strength
Significantly improved coating adhesion and more than 2x conventional chipping resistance

■ Excellent Chip Control

Cutting Conditions	Chip	
vc = 196 SFM fz = 0.005 IPT ap = 0.39in ae = 0.83in Wet (7MPa) Ramping Angle: 0° 	WSE	Competitor's Product

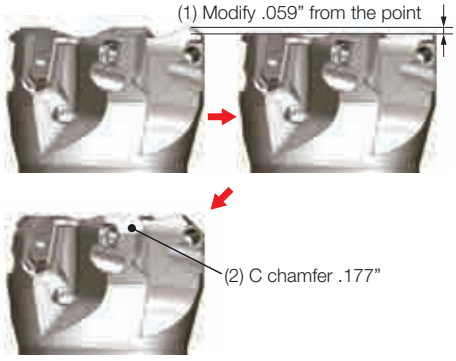
vc = 164 SFM fz = 0.005 IPT ap = 0.16in ae = 1.97in Wet (7MPa) Ramping Angle: 5.5° 	WSE	× Machining Not Possible Competitor's Product

Machine: 5-axis Machine HSK100, Work Material: Ti-6Al-4V
Tool: WSE 16050RS05L (ø50, 5-tooth)
Insert: XOMT160540PEER-E (ACS3000)

*Modification of the cutter body is required when mounting a corner radius 5.0 or higher insert.



■ Recommended Cutting Conditions

ISO	Material		Hardness	Chipbreaker	Cutting Speed v_c (m/min) Min. - Max.	Feed Rate f_z (mm/t) Min. - Max.	Grade
S	Exotic Alloy	Heat-Resistant Alloy	—	E	25 - 50	0.05 - 0.15	ACS2500/ACS3000
		Ti Alloy	—	E	30 - 90	0.05 - 0.15	ACS2500/ACS3000
M	Stainless Steel	430 Stainless and Others (Martensitic/Ferritic)	200	E	115 - 175	0.05 - 0.15	ACS2500/ACS3000
		403 Stainless and Others (Martensitic/Hardened)	240	E	105 - 155	0.05 - 0.15	ACS2500/ACS3000
		304 Stainless, 316 Stainless (Austenitic)	180	E	125 - 190	0.05 - 0.15	ACS2500/ACS3000

— The recommended cutting conditions may not be practical depending on the operating conditions (e.g. machine, work material shape, clamping system).
— For groove milling, adjust the feed rate to around 70% of the above values.

Note The cutting conditions above are a guide. Actual conditions will need to be adjusted according to machine rigidity, work clamp rigidity, depth of cut and other factors.

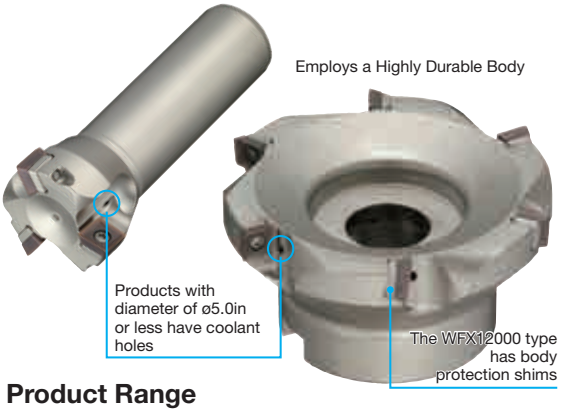
■ General Features

WaveMill WFX for shoulder milling is a screw-locking type cutter capable of using four corners.
Ideal cut edge design delivers good squareness.
Now with high-efficiency, multi-functional WFXH and chamfering WFXC.
Our wide range covers a wide variety of applications.
Now available in ACU2500.

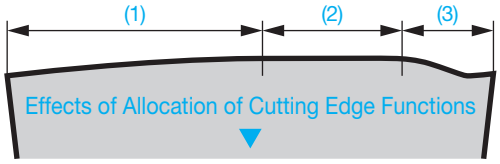
WFXH **WFXC**

■ Features

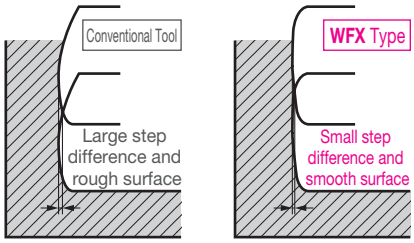
The insert shape optimized for shoulder milling and the high-precision body leave a superior machined surface finish.



• Optimized Edge Shape (For Shoulder Milling)



(1): The convex shape **ensures cutting edge strength**
(2): The flat shape **reduces step differences** in shoulder milling



(3): The wiper edge function improves the surface roughness

■ Product Range

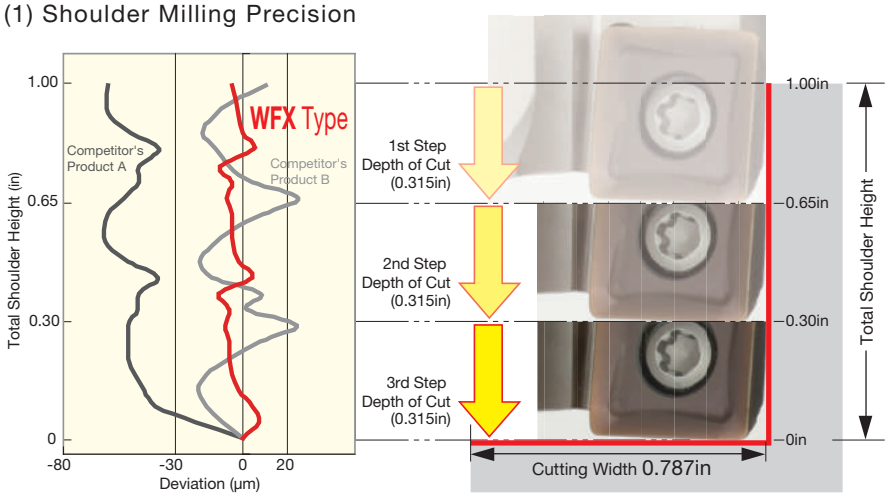
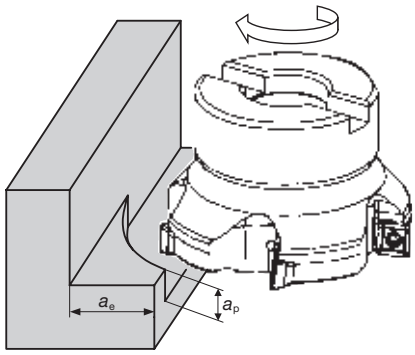
■ Cutting Performance

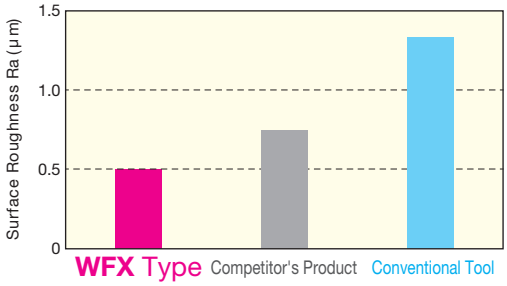
(1) Shoulder Milling Precision





Part Material: **1050 Steel** Tool: **WFX12100R** (ø100 x 5 flutes)
Cutting Conditions: v_c = **656** SFM, f_z = **0.006 IPT**,
a_p = **0.315"** x **3** times, a_e = **0.8"**

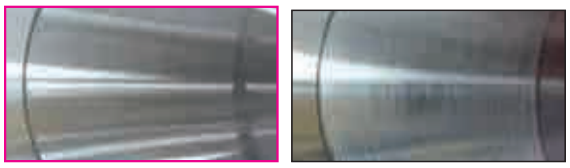
(2) Comparison of Surface Roughness



Part Material: **4140 Steel** Tool: **WFX12100R** (ø100 x 5 flutes)
Cutting Conditions: v_c = **656 SFM**, f_z = **0.004 IPT**,
a_p = **0.12in**, a_e = **3.54in**

(3) Comparison of Surface Properties

Part Material: **1050 Steel**
Cutting Conditions: a_p = **0.02"**

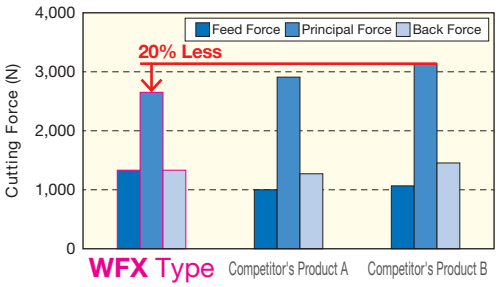


Glossy without Clouding — Clouded without Gloss

Part material: **304 Stainless**
Cutting Conditions: a_p = **0.02"**

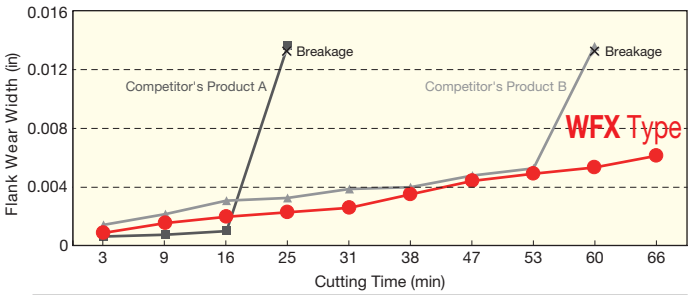
WFX — Competitor's Product

(4) Comparison of Cutting Force



Part Material: **1050 Steel** Tool: **WFX12100R** (ø100 x 5 flutes)
Cutting Conditions: v_c = **656 SFM** f_z = **0.006** IPT,
a_p = **0.4**in, a_e = **0.8in**

(5) Comparison of Wear Resistance



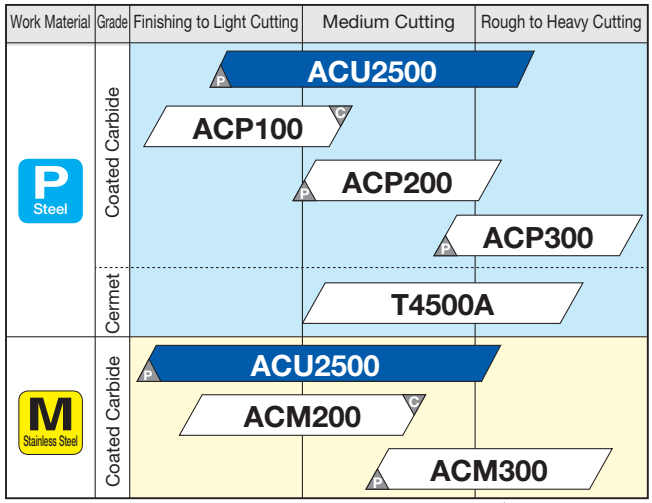
Part Material: **4140 Steel** Tool: **WFX12100R** (ø100 x 1 flute evaluation)
Cutting Conditions: v_c = **656 SFM**, f_z = **0.006 IPT**,
a_p = **0.2**in, a_e = **1.18in**

■ Application Examples

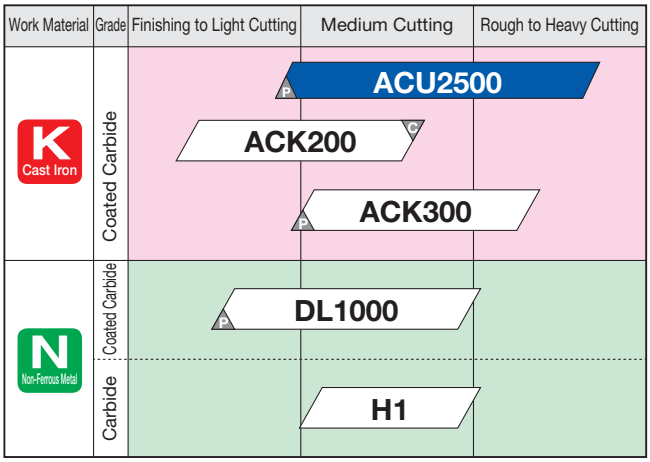
Workpiece (1050 Steel)		Sumitomo	Conventional Tool
	Tool	**WFXF08063RS**	
	Grade	**ACP200**	
	Tool Dia. (mm)	ø63	ø63
	Number of Teeth	8	5
	v_c (SFM)	720	720
	v_f (IPT)	43	43
	f_z (IPM)	0.006	0.008
	a_p (in)	0.12	0.16
	a_e (in)	1.97	1.97
	Coolant	Wet	Wet
	Results	· Vibration reduced by approximately 30% · Good machined surface · Tool life doubled	

Workpiece (Cast Iron - FCD450)		Sumitomo	Conventional Tool
	Tool	**WFXF12100R**	
	Grade	**ACK300**	
	Tool Dia. (mm)	ø100	ø100
	Number of Teeth	7	6
	v_c (SFM)	656	656
	v_f (IPM)	17.5	17.5
	f_z (IPT)	0.004	0.004
	a_p (in)	0.002	0.002
	a_e (in)	-	-
	Coolant	Dry	Dry
	Results	· Good surface roughness Ra 0.98 → 0.38μm, Rz 7.63 → 3.34μm · Cutting time shortened Insert life is extended by approximately 20%	

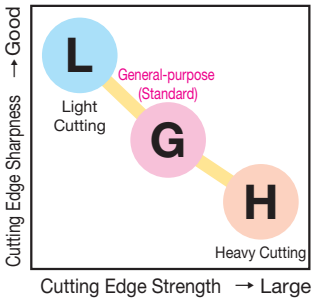
■ Grade Application Range



The letters "C" and "P" at the end of each grade indicate the coating type. C: CVD, P: PVD, Blank: Uncoated



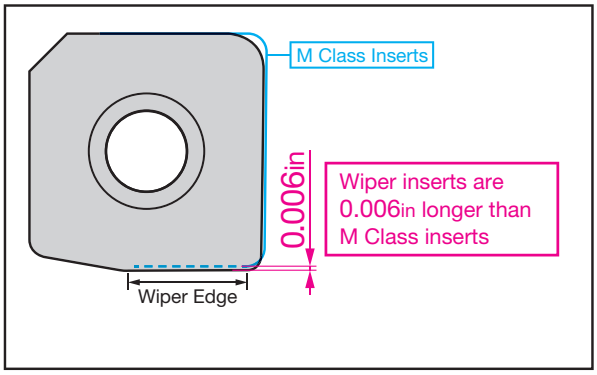
■ Chipbreaker Selection

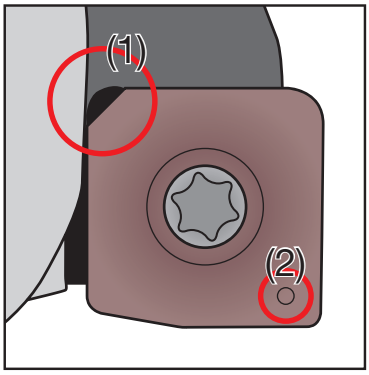


Part Material	P M K S				N
Chipbreaker	L Type	G Type	H Type	Wiper Insert	S Type
Features	Low Cutting Force	General-purpose Type	High Strength Type	Wiper Edge	Sharp Edge
Cutting Edge Cross Section	20°	15°	10°	15°	25°
Applications	Light Cutting, Low Rigidity Milling and Reduction of Burrs	Main Chipbreaker General Purpose to Interrupted Milling	Roughing, Heavy Interrupted Cutting and Hardened Steel Milling	High-precision Finish	For Non-Ferrous Metals

■ Wiper Insert

Optimized wiper edge shape provides superior surface roughness.





Precautions when Using Wiper Inserts

- The wiper insert has a single corner specification.
- Place the wiper insert so that the chamfered corner is in location (1) shown in the figure.
- Use the corner with the ID mark. (2) (08-size inserts have no marks)
- Refer to page N55 for details about wiper inserts.

■ Cutting Conditions

Inserts are sold separately. Check the pilot diameter (DCB) when selecting the cutter.

For securing the ø80mm and ø100mm cutters to the arbors marked with *, use a JIS B1176 hexagonal socket bolt (ø80: M12 x 30 to 35mm, ø100: M16 x 40 to 45mm).

Recommended Cutting Conditions

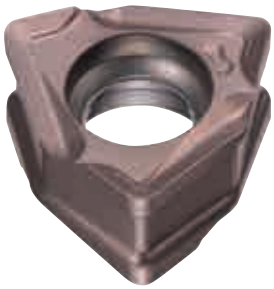
ISO	Work Material	Hardness	Cutting Speed c (m/min) Min. - Max.	Feed Rate z (mm/t) Min. - Max.	Depth of Cut p (mm)	Insert Grade
P	General Steel	180 to 280 HB	150 - 250	0.08 - 0.18	< 6	ACU2500 ACP200 ACP300
	Mild Steel	≤ 180HB	180 - 350	0.10 - 0.20	< 6	
	Die Steel	200 to 220 HB	100 - 200	0.08 - 0.18	< 4	ACP200 ACP300
M	Stainless Steel	-	160 - 250	0.10 - 0.20	< 6	ACU2500 ACM300
K	Cast Iron	250HB	100 - 250	0.10 - 0.20	< 6	ACU2500 ACK200 ACK300
N	Non-ferrous Metal	-	300 - 1,000	0.10 - 0.20	< 6	H1 DL1000

Note The cutting conditions above are a guide. Actual conditions will need to be adjusted according to machine rigidity, work clamp rigidity, depth of cut and other factors.

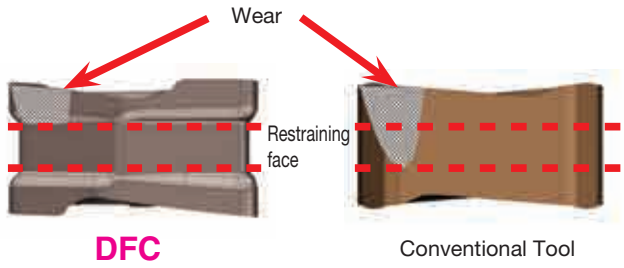
■ General Features

The high-efficiency general-purpose Sumi Dual Mill DFC has a unique insert shape with both excellent sharpness and cutting edge strength, enabling it to be used for a wider range of applications from high-efficiency machining through to finishing.
Further expansion of the shoulder milling GS chipbreaker, suitable for a wide range of applications.
Now available in ACU2500.

■ Features



Unique insert shape delivers sharp cutting performance and cutting edge strength



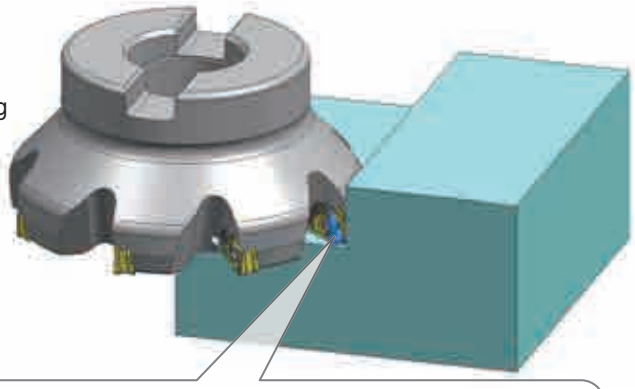
Flank wear of inserts for DFC does not reach the restraining face and thus mounting accuracy does not suffer.

The 90° cutting edge angle is suitable for both face milling and shoulder milling

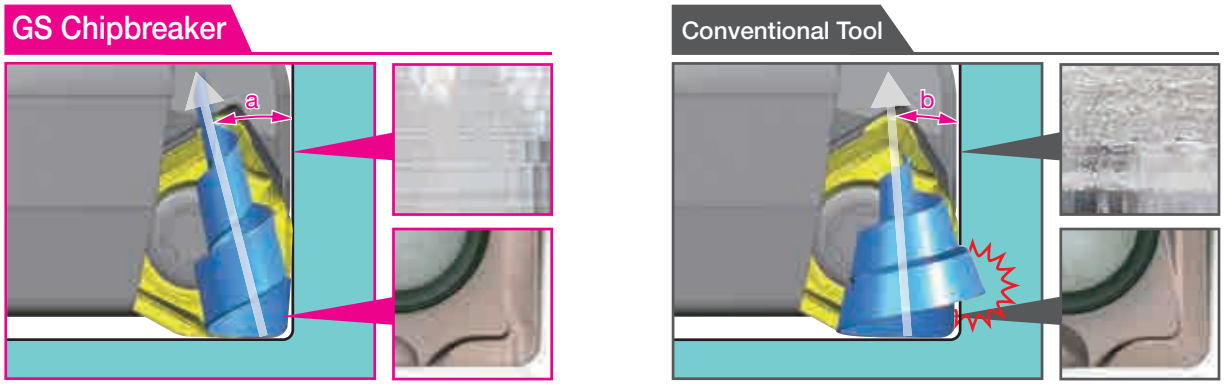
GS Chipbreaker for Shoulder Milling

· Excellent chip control
· Suppresses machined surface deterioration due to chip re-cutting

Part Material: 1050, Tool: ø4.000”
Cutting Conditions: v_c = 656 SFM, f_z = 0.008 IPT,
a_e = 1.97”, a_p = 0.12” x 6 passes, Dry



Chip generation image and machined surface comparison

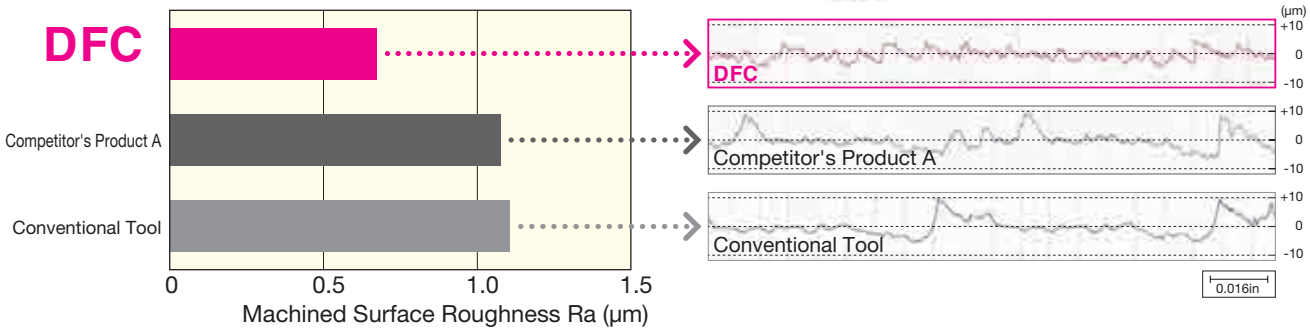


Chip flow direction control (a > b) ⟶ chip re-cutting suppressed

■ Cutting Performance

Face Milling

(1) Machined Surface Roughness Better than competitors' products

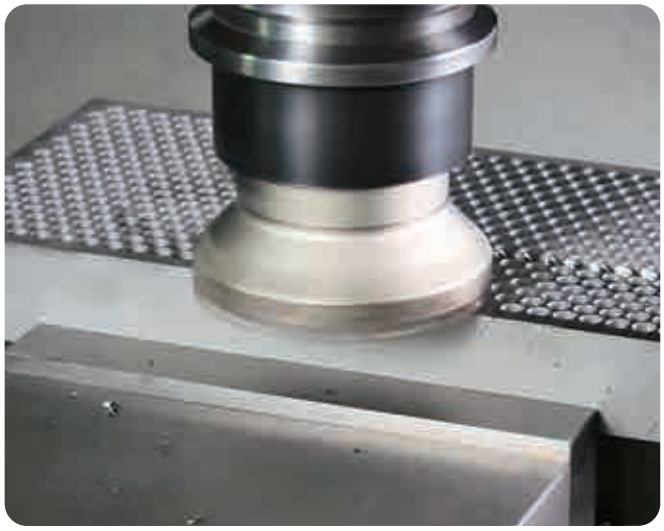


Part Material: 1050 Tool: DFC 09100RS Insert: XNMU 060608PNER-G Grade: ACP200 Cutting Conditions: v_c = 656 SFM, f_z = 0.008 IPT, a_p = 0.12”, a_e = 3.35” Dry

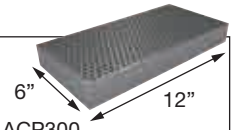
(2) Cutting edge strength: Cutting edge damage during heavy interrupted cutting
Cutting edge strength surpassing competitors' double-sided cutters

	f_z(IPT)		
	0.012	0.016	0.020
DFC	○	○	○
Competitor's Product B (Double-sided, 6 Corners)	○	Damage (Midway through 2 passes)	
Competitor's Product C (Double-sided, 6 Corners)	Damage (Midway through 3 passes)		
Competitor's Product D (Double-sided vertical)	Damage (Midway through 3 passes)		

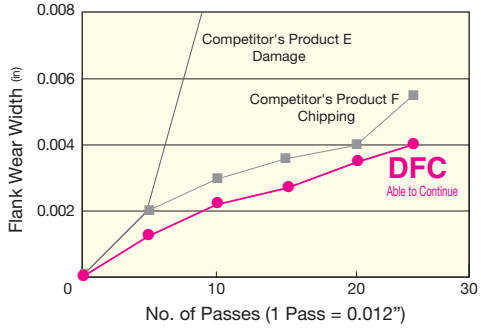
(Cutting Distance: 0.9m)



Part Material: 1050 (With Holes)
Tool: DFC 09100RS
Insert: XNMU 060608PNER-G Grade: ACP300
Cutting Conditions: v_c = 492 SFM a_p = 0.12”, a_e = 1.97” Dry



(3) Wear resistance: Achieves long tool life thanks to excellent wear resistance



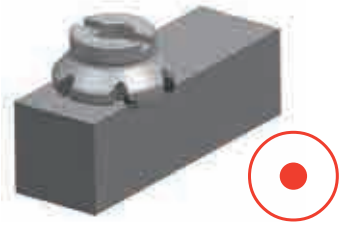
Comparison of cutting edge damage

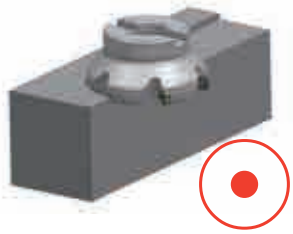
Little damage / Able to continue | Breakage | Damaged

Work Material: 1050 Tool: DFC 09100RS Insert: XNMU 060608PNER-G Grade: ACP200 Cutting Conditions: v_c = 656 SFM, f_z = 0.008 IPT, a_p = 0.12”, a_e = 3.35” Dry

■ Applications and Recommended Chipbreakers

Face Milling	Shoulder Milling	Side Milling
G	GS	G/GS



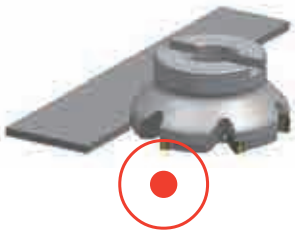


Guidelines for Shoulder Milling Conditions

Radial Direction Maximum Depth of Cut
G Type: $a_e \leq 10\%$ of cutter diameter
GS Type: $a_e \leq 50\%$ of cutter diameter

Recommended Axial Depth of Cut $a_p = 0.120"$

Recommended Feed Rate $f_z \leq 0.008$ IPT
(for general steel)



Applications which are not applicable

Helical Milling

Ramping

■ Insert Mounting Precautions

No Gap

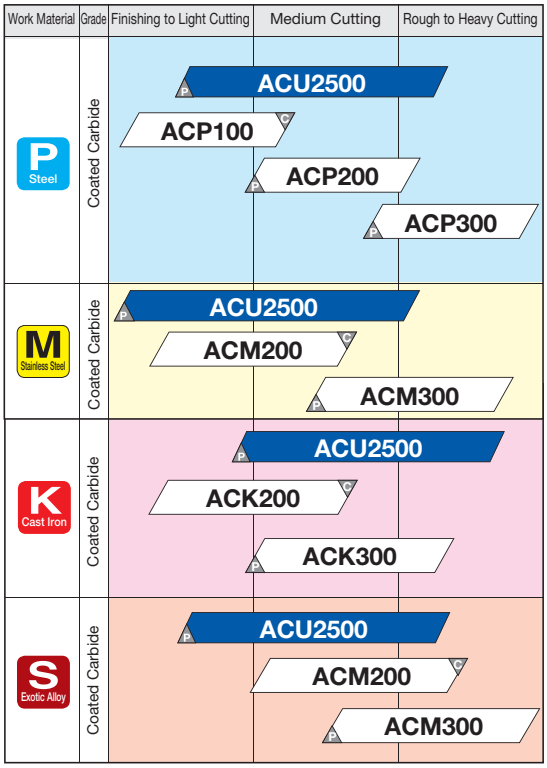
Prevent gaps from occurring

Gap

Place the insert face flat on to the cutter's insert pocket and tighten the flat screw with the recommended torque.

■ Insert Grade

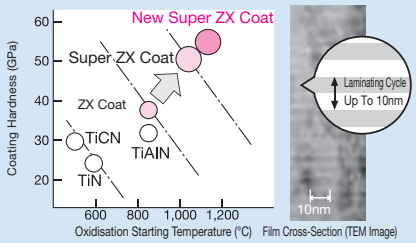
Lineup of Steel Milling Grades ACP100/ACP200/ACP300, Stainless Steel Milling Grades ACM200/ACM300, Cast Iron Milling Grades ACK200/ACK300 and more for a wide range of materials.



The letters "C" and "P" at the end of each grade indicate the coating type. C: CVD, P: PVD, Blank: Uncoated

P ACP200/ACP300/ACK300/ACM300

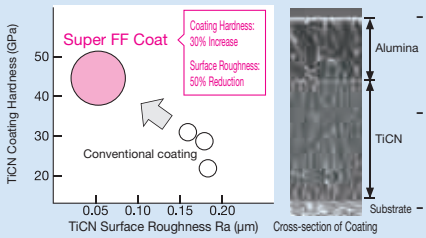
NEW SUPER ZX COAT



- Compared to conventional tools, the coating hardness has been increased by 40% and the oxidation starting temperature has been increased by 200°C
- Enables more than 1.5 times the machining speed and efficiency of conventional tools
- Achieves more than double the tool life of conventional tools

C ACP100/ACK200/ACM200

SUPER FF COAT



- Achieves excellent chipping resistance with smooth coating and our coating stress control technology
- High-speed, high-efficiency machining at a level more than 1.5 times higher than conventional tools is possible with a high hardness coating layer
- Achieves more than double the tool life of conventional tools

Note: The cutting conditions above are a guide. Actual conditions will need to be adjusted according to machine rigidity, work clamp rigidity, depth of cut and other factors.

For shoulder milling, the GS breaker is recommended. Use at $a_e \leq 50\%$ of cutter diameter and $f_z \leq 0.008$ IPT.

■ Features

- Excellent Machined Surface Quality

  Employs ground insert for high accuracy to produce excellent machined surface quality.

- Cutting Edge Designed for High Cutting Edge Strength and Sharpness

  Provides tangential insert and optimized cutting edge shape to achieve both high cutting edge strength and sharpness.

- Wide Ranging Product Lineup

  An enhanced lineup of grades is available in addition to 2 types of insert sizes and 3 types of chipbreakers.
  Can be used for various machining applications.

- Now Available grade: ACU2500

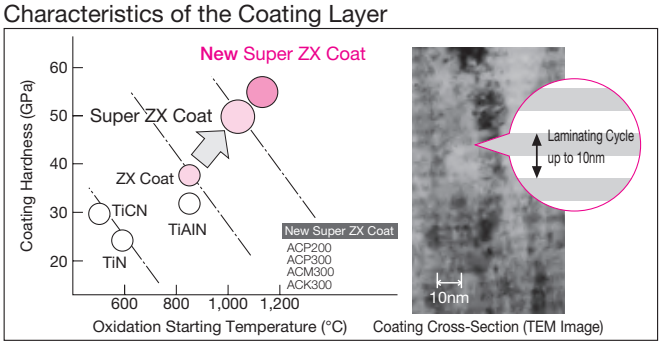
■ Coating Features

P Super ZX Coat
(PVD: Physical Vapor Deposition)

Employs our super multi-layered New Super ZX Coat, which utilizes our proprietary thin-layer coating technology and advanced nanotechnology. The coating consists of thousands of alternating, nanometer-thin (1 nanometer = 1 billionth of a meter) layers

Characteristics of the Coating Layer

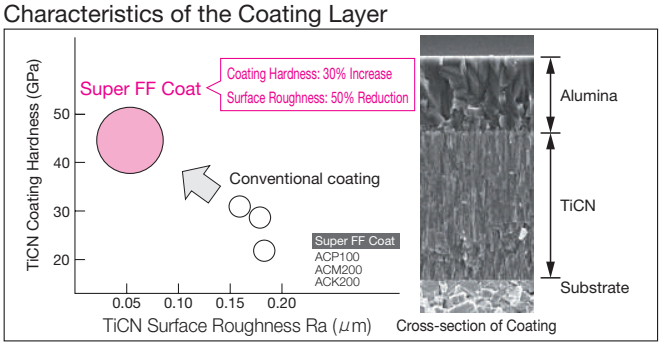


- ▸ Compared to conventional tools, the coating hardness has been increased by 40% and the oxidation starting temperature has been increased by 200°C
- ▸ Enables more than 1.5 times the machining speed and efficiency of conventional tools
- ▸ Achieves more than double the tool life of conventional tools

C Super FF Coat
(CVD: Chemical Vapor Deposition)

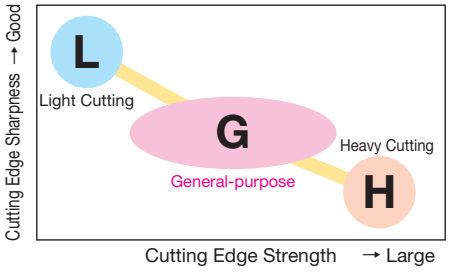
Provides excellent wear resistance and high reliability thanks to our coating stress control technology and the ultra-fine crystal grain coating layer of the Super FF Coat achieved through our proprietary CVD process technology

Characteristics of the Coating Layer



- ▸ Achieves excellent chipping resistance with smooth coating and our coating stress control technology
- ▸ High-speed, high-efficiency machining at a level more than 1.5 times higher than conventional tools is possible with a high hardness coating layer
- ▸ Achieves more than double the tool life of conventional tools

■ Chipbreaker Selection



■ Chipbreaker Lineup

Part Material	P M K S

Inserts are sold separately. Check the pilot diameter (DCB) when selecting the cutter.

For securing the ø80mm and ø100mm cutters to the arbors marked with *, use a JIS B1176 hexagonal socket bolt (ø80: M12 x 30 to 35mm, ø100: M16 x 40 to 45mm).

PWS(F) / PWSR

■ General Features

A highly reliable shoulder milling cutter with strong, sharp cutting edge and tangential inserts.

PWSR, with a 2-stage insert array structure supporting large depths of cut, has been added to the lineup.

*Made to Order Only

■ Features

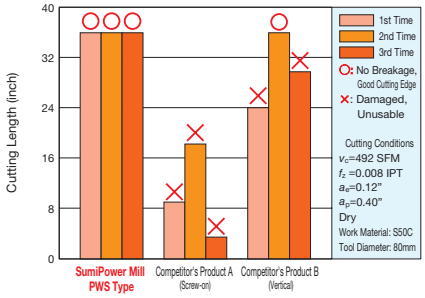
- Tangential inserts with excellent cutting edge strength and optimized breaker provide superb cutting edge and sharpness.
- Serrated insert design created with high-precision formation technology allows stable milling and low chatter even in applications with large tool overhang.
- ACP and ACK series allow a wide range of materials to be covered.

■ Performance

- General-purpose G Insert Performance Comparison

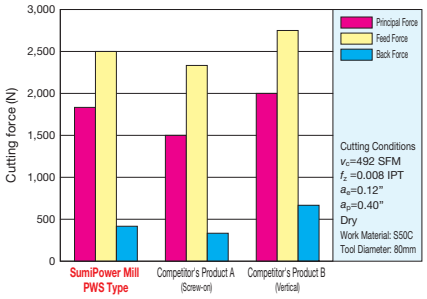
Comparison of Cutting Edge Strength

Strong cutting edge delivers superb stability



Comparison of Cutting Force

Sharpness approaching that of screw-on inserts



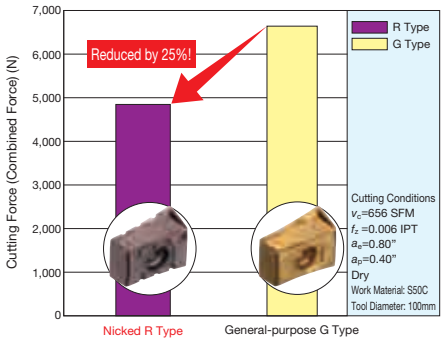
- Serrated R Insert Performance Comparison

Serrated R Insert

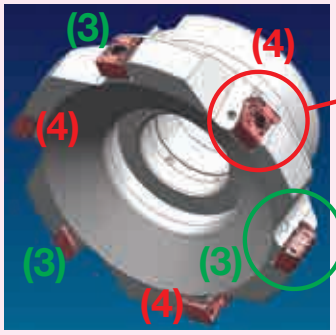
General-purpose G Type Insert

Comparison of Cutting Force

Reduced cutting power and excellent chatter resistance



⚠ Serrated R Insert Usage Precautions



1) Precautions when Mounting

When using the serrated R indexable inserts, mount them so that the serrated grooves alternate as shown in the image on the left.

2) Precautions for Cutting Conditions

As these are mounted as in the image on the left, compared to mounting inserts of the same shape for all blades, the feed rate per tooth is doubled. Accordingly,

f_z = 0..010 IPT

feed rate is set as the upper limit and can be adjusted for use.

Ex.) For use with f_z = 0.008"/t

With all regular blades: Feed Rate per Tooth 0.008 IPT

With serrated types: Feed Rate per Tooth 0.016 IPT

Using inserts incorrectly may damage tools.

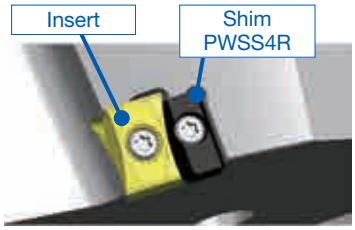
Large Diameter Size
(ø8.00" & ø200 mm or larger sizes.)
Body Structure

Safety Shim Design to Protect Body



■ General Features and Benefits

- DMSW & DMSL inserts provide a complex arc-shape cutting edge which allows for feed rates up to 0.138" IPT at low axial depth of cuts.
- Cutting forces are reduced due to a large lead angle which promotes stable machining in long projection applications.
- Introducing the DMSL series for smaller diameters starting at 0.625".

Take note of the cutter mounting size (DCB) when selecting a cutter. Inserts are sold separately.
For mounting the cutters marked with * to an arbor, use a JIS B1176 hex socket bolt (metric specification: M12 x 30 to 35mm, inch specification: M16 x 40 to 45mm).

Take note of the cutter mounting size (DCB) when selecting a cutter. Inserts are sold separately.
For mounting the ø80, ø85, and ø100mm sized cutters marked with * to an arbor , use a JIS B1176 hex socket bolt (metric specification: M12 x 30 to 35mm, inch specification: M16 x 40 to 45mm).

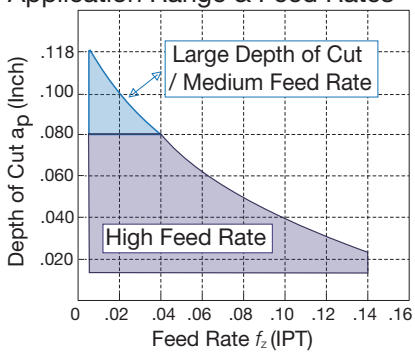
	Alloy Steel	Below 280HB	365 - 720	0.025 - 0.090	ACU2500/ACP2000/ACP3000
	Alloy Steel	Below 42HRC	365 - 650	0.025 - 0.050	ACU2500/ACP2000/ACP3000
M	Stainless Steel	—	330 - 550	0.025 - 0.050	ACU2500/ACS2500/ACS3000
K	Cast Iron	—	365 - 900	0.025 - 0.080	ACU2500/ACK2000/ACK3000
S	Heat Resistant Alloy	—	80 – 150	0.012 – 0.035	ACU2500/ACS2500/ACS3000
	Titanium Alloy	—	110 – 250	0.016 – 0.035	ACU2500/ACS2500/ACS3000
H	Hardened Steel	Below 52HRC	330 - 430	0.012 - 0.030	ACU2500/ACP3000

Precaution:
- Please adjust axial depth of cut (ap) based on the feed rate (IPT).
- Do not exceed the recommended depth of cut based on the feed rate (IPT).

Note
- The above figures are guidelines for use with CAT50, BT50, and HSK100A machine tools at depth of cut (a_p) of .060".
- The above recommended cutting conditions may require adjustment depending on machine rigidity, workpiece rigidity and projection.

■ Application Range & Feed Rates



Precaution:
- Please adjust axial depth of cut (ap) based on the feed rate (IPT).
- Do not exceed the recommended depth of cut based on the feed rate (IPT).

Recommended Tightening Torque (N·m)

* Caution when tightening the head.

- When mounting the head to an arbor, follow the standard tightening torque in the table below.
- Check the mounting screw size for the head and arbor beforehand.

Screw Size	Regulated Tightening Torque k (N·m)	Tool Dimensions L11	Tool Dimensions H
M8	23	*8*	*13*
M10	46	*8*	*15*
M12	80	*10*	*19*
M16	90	*10*	*24*

	f_z (IPT)	.033	.033
	a_p (Inch)	.039	.039
	a_e (inch)	1.97	1.97
	Coolant	Dry	Dry
	Results	Achieved 240 min of cutting without indexing the inserts.	

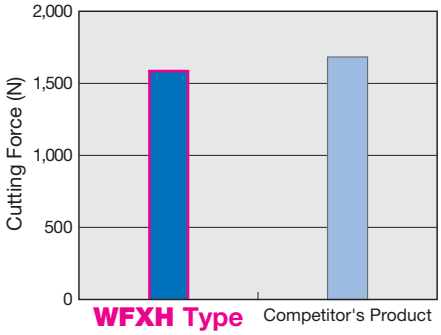
■ General Features

WFXH Series are high performance multi-functional cutters that use a WFX series insert to support roughing at high feed rates and other milling applications.
Now available in ACU2500.

■ Features

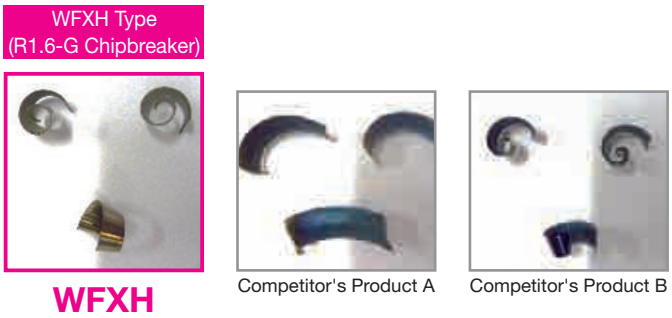
(1) Stable, high-efficiency machining due to insert's superior sharpness
(2) Various milling applications are supported (ramping, helical milling)
(3) Various inserts for the WFX series can be used

Cutting force: High sharpness provides stable cutting



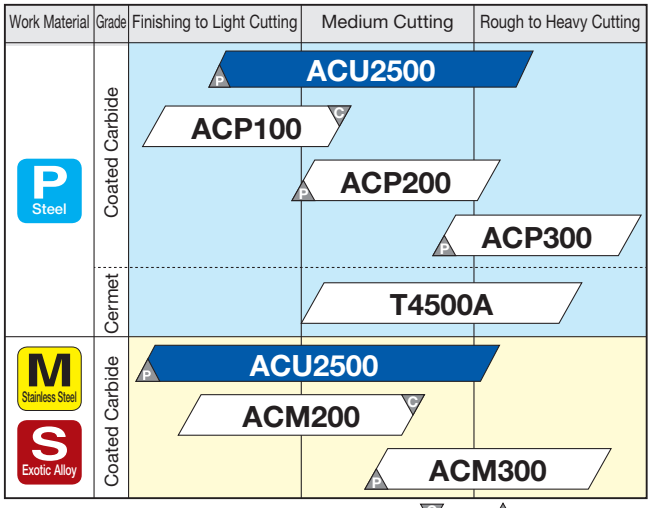
Part Material: 1050
Tool: WFXH12063RS (5 flutes)
Cutting Conditions: v_c=656 SFM, f_z=0.039"/t, a_p=0.019", a_e=1.73", Dry

Chips: Small, curly chips at low cutting temperature

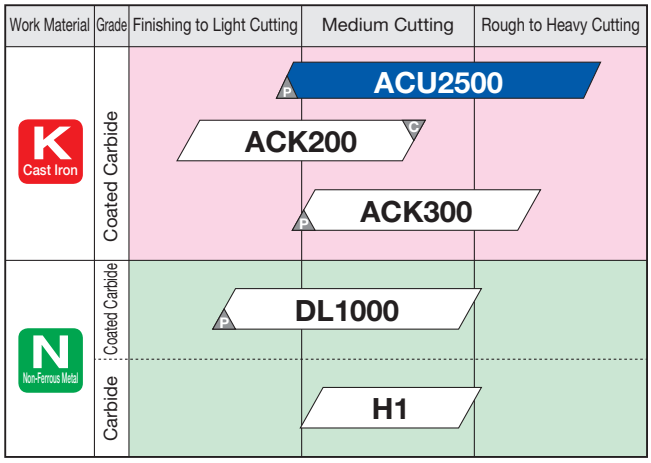


Part Material: 1050
Tool: WFXH12063RS, SOMT120416PDER-G (ACP200)
Cutting Conditions: v_c=656 SFM, f_Z=0.039"/t, a_p=0.039", a_e=1.38", Dry

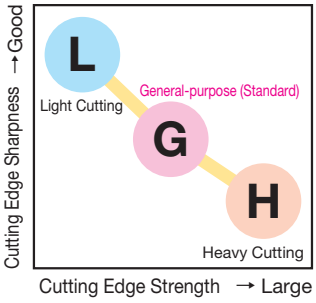
■ Grade Application Range



The letters "C" and "P" at the end of each grade indicate the coating type. C: CVD, P: PVD, Blank: Uncoated



■ Chipbreaker Selection



Work Material	P M K			N
	L Type	G Type	H Type	S Type
Chipbreaker				
Features	Low Cutting Force	General-purpose Type	High Strength Type	Sharp Edge
Cutting Edge Cross Section	20°	15°	10°	25°
Applications	Light Cutting, Low Rigidity Milling and Reduction of Burrs	Main Chipbreaker General Purpose to Interrupted Milling	Roughing, Heavy Interrupted Cutting and Hardened Steel Milling	For Non-Ferrous Metals

■ Precautions for Use (1) Precautions for Corner Finishing

* Corners have remaining material or over-cut portion with respect to the expected corner profile.

· The above recommended cutting conditions may require adjustment depending on machine rigidity and work rigidity.
The above figures are guidelines for use with BT50 machine tools.

· The above recommended cutting conditions assume a tool overhang length of L/D=3 (i.e. overhang length of 3 times tool diameter) or less.
When tool overhang is more than L/D=3 and less than or equal to L/D=5, settings should be adjusted to approximately 70 to 80% of those indicated in the above recommended cutting conditions (a_p, f_z).
When tool overhang is more than L/D=5 and less than or equal to L/D=8, settings should be adjusted to approximately 50 to 60% of those indicated in the above recommended cutting conditions (a_p, f_z).

· The above recommended cutting conditions may require adjustment depending on machine rigidity and work rigidity. The above figures are guidelines for use with BT50 machine tools.

· The above recommended cutting conditions assume a tool overhang length of L/D=3 (i.e. overhang length of 3 times tool diameter) or less.
When tool overhang is more than L/D = 3 and less than or equal to L/D=5, settings should be adjusted to approximately 70 to 80% of those indicated in the above recommended cutting conditions (i.e. a_p and Feed Rate).
When tool overhang is more than L/D = 5 and less than or equal to L/D=8, settings should be adjusted to approximately 50 to 60% of those indicated in the above recommended cutting conditions (i.e. a_p and feed rate).

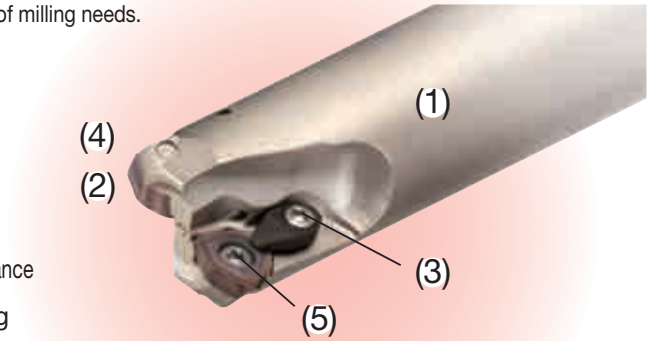
■ General Features

The Metal Slash Mill MSX is a multi-purpose cutter capable of roughing at high feeds. Its wide application range dramatically boosts efficiency.
Inserts are available in four sizes, ranging from ø.750" to ø6.000" diameter, to cover a wide variety of milling needs.



■ Features

(1) **Highly Durable Body** Special surface treatment improves scratch resistance
(2) **Versatile Machining Operations** Use for ramping, helical and pocketing
(3) **Double Clamp** Stable milling with a strong clamp is possible (MSX06000 or MSX08000 units with ø22mm or less use a single clamp)
(4) **With Coolant Hole** Improved chip evacuation with air or coolant supply hole and specially shaped pocket design
(5) **Insert Shape** Unique tool shape combines sharpness and cutting edge strength

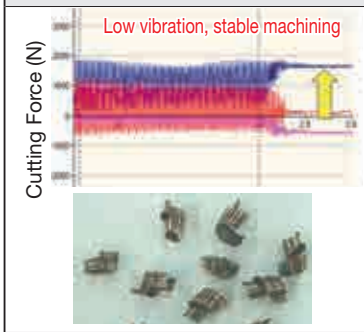
■ Insert Applications and Types

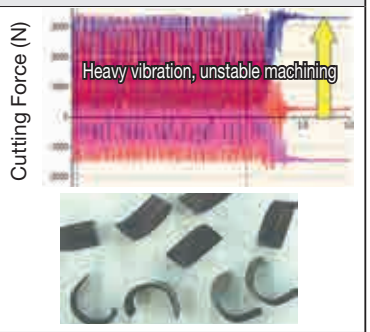
· Insert utilizes a special cutting edge profile.
· Economical, three-cornered insert

Type	General-Purpose	Strong Edge
Applications	General Milling (First Recommendation)	Interrupted Milling
Appearance / Features	 Sharper Edge	Emphasis on Fracture Resistance

■ Cutting Performance

● Comparison of Cutting Force

MSX	Conventional Tool
	




Part Material: 1050
Cutting Conditions: v_c=492 SFM, f_z=0.04 IPT, a_p=0.984in, a_e=0.08in

● Shoulder Milling Comparison of MSX and Conventional Tool

MSX	Conventional Tool
Performs under high conditions	Prone to chatter
	Cutting force is consistent even when depth of cut is increased, for stable cutting performance.	Greater depth of cut increases contact length, which increases cutting force.

■ Product Range

	Type	External Diameter				Applicable Insert
		Inch	Number of Teeth	MM	Number of Teeth	
Shellmill	**MSX3/08**	1.50" to 2.00"	4 to 5	ø40	4 to 5	WDMT 08
	MSX4/12	2.00" to 4.00"	4 to 7	ø50 to ø63	4 to 7	WDMT 12
	MSX5/14	2.00" to 6.00"	4 to 8	ø50 to ø100	3 to 8	WDMT 14
Endmill	**MSX2/06**	0.75"	3	ø16 to ø25	2 to 3	WDMT 06
	MSX3/08	1.00" to 1.50"	2 to 4	ø20 to ø35	2 to 4	WDMT 08
	MSX4/12	1.25" to 1.50"	2 to 3	ø32 to ø50	2 to 4	WDMT 12
	MSX5/14	-	-	ø40 to ø63	2 to 4	WDMT 14
Modular	**MSX2/06**	0.75" to 1.00"	3	ø16 to ø25	2 to 3	WDMT 06
	MSX3/08	1.00" to 1.25"	3	ø25 to ø35	2 to 3	WDMT 08
	MSX4/12	-		ø32 to ø40	2 to 3	WDMT 12

■ Precautions for Corner Finishing

* Corners will have remaining material or gouges with respect to the expected corner profile.

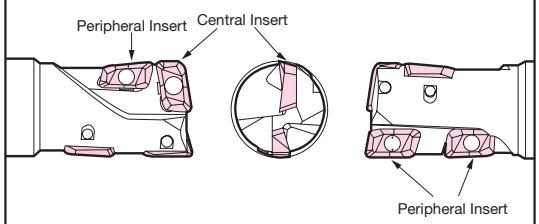
■ General Features

The WaveMill WMM Type performs a variety of operations such as groove milling, shoulder milling, ramping, pocketing, drilling, helical milling, etc., all with a single tool.
With low cutting force and excellent chip evacuation, it is also effective for consolidating tools.

■ Features and Applications

- The WMM Type alone can perform a number of operations such as shoulder milling, slot milling and drilling
- Excellent for high-efficiency ramping, helical drilling and pocketing
- Uses WaveMill inserts for sharpness and cutting edge strength
- The reduction in cutting force enables the same chip evacuation as conventional tools but with less force required
- Easy tool management as only 1 type of insert is used
- Also ideal for stainless steel machining

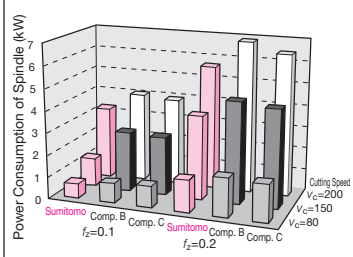
● WMM Type insert arrangement



■ Product Range and Performance

Type	Description	Cutter Dia. (mm) ø20 – ø30 – ø40
2000E	Standard Type	20 – 30
2000EL	Long Type	20 – 30
2000ELH	Long Type w / Coolant Hole	20 – 30
2000EXLH	Extra-Long Type w / Coolant Hole	22 – 30
3000E	Standard Type	32 – 40
3000EL	Long Type	32 – 40
3000ELH	Long Type w / Coolant Hole	32 – 40
3000EXLH	Extra-Long Type w / Coolant Hole	35 – 40

● Performance Comparison (Groove Milling)



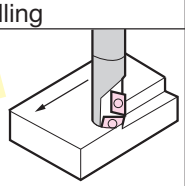
Diameter of Tool: ø25
Work Material: S50C
Cutting Conditions: v_c=80,150,200m/min, f_z=0.1, 0.2mm/t
a_p=15mm, Tool Overhang=40mm

■ Various Milling Examples Tool: WMM2025E

● Shoulder Milling

304 Stainless Steel

Also cuts stainless steel

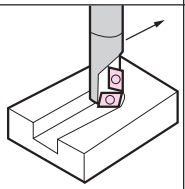


Diameter of Tool: ø25
Insert: APMT103504PDER (ACZ350)
Depth of Cut: a_p=1.00", a_e=0.20"
Cutting Speed: v_c=394 SFM, Feed Rate: f_z=0.006 IPT
Air Blast

● Slot Milling

Gray Cast Iron

Deep slot milling can be performed easily, Easy chip removal

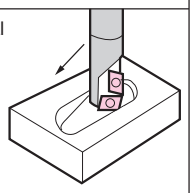


Diameter of Tool: ø25
Insert: APMT103504PDER (ACZ310)
Depth of Cut: a_p=0.60" , a_e=1.00"
Cutting Speed: v_c=590 SFM, Feed Rate: f_z=0.005 IPT
Air Blast

● Ramping

1050 Block Material

Capable of tapered recess cutting without prepared holes

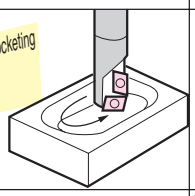


Diameter of Tool: ø25
Insert: APMT103504PDER (ACZ350)
Cutting Width: a_e=1.00", Depth: a_p=0.60"
Cutting Speed: v_c=656 SFM, Feed Rate: f_z=0.004 IPT
Ramp Angle: θ°=15°
Air Blast

● Pocketing

1050 Block Material

Capable of traverse cutting and pocketing with continuous lateral feed from the initial drilling or ramping process

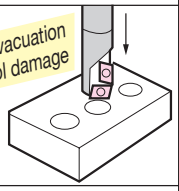


Diameter of Tool: ø25
Insert: APMT103504PDER (ACZ350)
Machining done continuously from a deep drilling process with a depth of 0.60"
Cutting Width: a_e=1.00", Depth: a_p=0.60"
Cutting Speed: v_c=656 SFM, Feed Rate: f_z=0.004 IPT
Air Blast

● Drilling

1050 Block Material

Capable of easy chip evacuation and drilling without tool damage



Diameter of Tool: ø25
Insert: APMT103504PDER (ACZ350)

■ Features

● **High-efficiency, high-rigidity radius cutter**
Wide insert seat face design achieves high efficiency machining of stainless steel etc.
Designed for superior durability
Ideal for roughing of aerospace components such as turbine blades

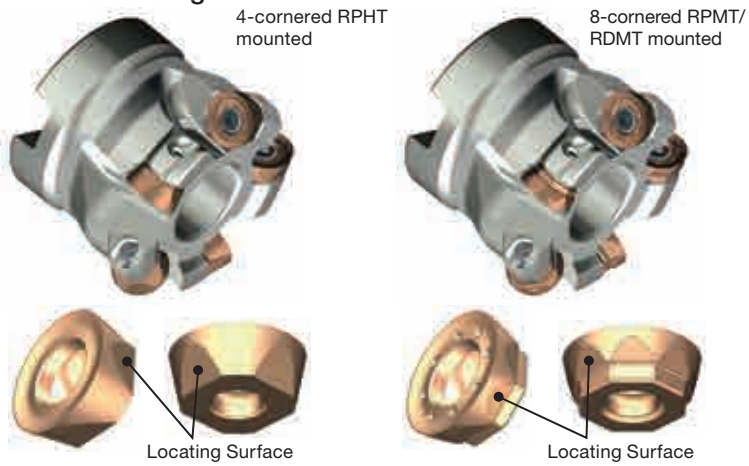
● **Lineup of ground and M class inserts**
In addition to the 4-cornered ground type inserts, economical 8-cornered M Class inserts are also available

● **Uses new grades for exotic alloy machining**
New ACS2500/ACS3000 grades achieve stable and long tool life in machining exotic alloys, such as titanium alloys and Ni-based heat-resistant alloys, as well as stainless steel

■ High-rigidity clamp design

Wide Insert Seat Face Design

■ Cutter body can be shared by optimizing the locating surface design



4-cornered ground inserts or 8-cornered M Class inserts can be used on the same cutter body

■ Product Range

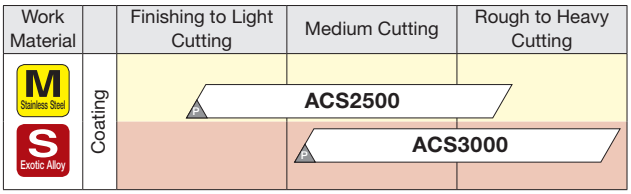
■ Chipbreaker Shape

Work Material	M Stainless Steel, S Exotic Alloy
Applications	General-purpose to Roughing
Features	Standard
Chipbreaker	G
Cutting Edge Cross Section	
■ Grade Features

Work Material	Grade	Coating Thickness (μm)	Features
M Stainless Steel / S Exotic Alloy	**ACS2500**	3	Coating with excellent wear and adhesion resistance provides outstanding performance especially in machining **titanium alloys**
	ACS3000	3	High toughness carbide substrate and a coating with excellent chipping resistance provide outstanding stability in a wide range of work materials such as **heat-resistant alloys, stainless steel**, and **titanium alloys**

■ Grade Application Range

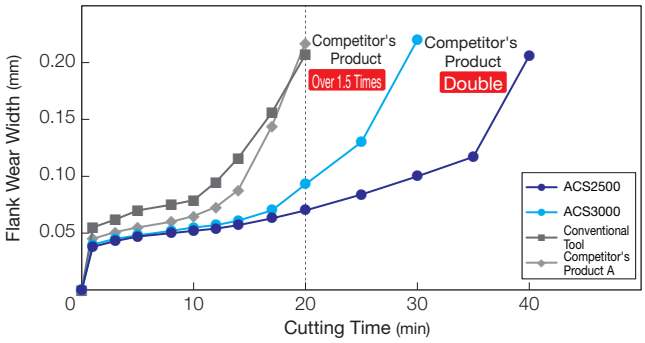
Newly developed **ACS2500/ACS3000** grades, ideal for machining titanium alloys, heat-resistant alloys and stainless steel, are now available!



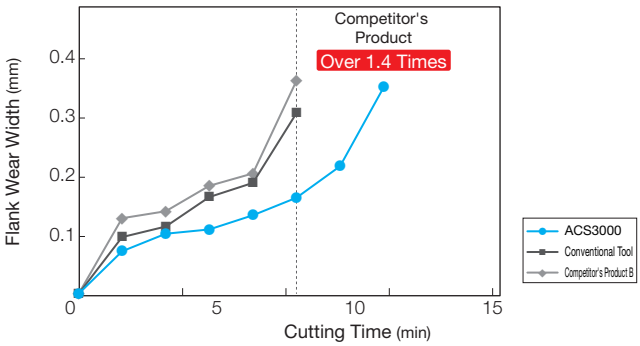
The letters "C" and "P" at the end of each grade indicate the coating.

C: CVD P: PVD

■ Cutting Performance



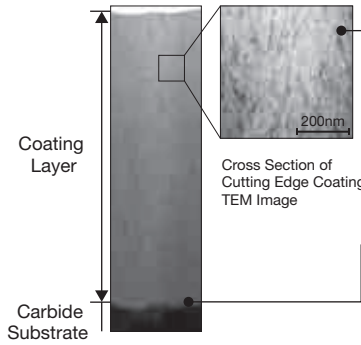
Machine	: Vertical Machining Center BT40, Work Material: Ti-6Al-4V
Tool	: RSE 12050RS05, Insert: RPHT1204M0EN-G
Cutting conditions	: vc = *70m/min* fz = *0.25mm/t* ap = *2mm* ae = *30mm* Wet



Machine	: Vertical Machining Center BT40, Work Material: Inconel 718 (44HRC)
Tool	: RSE 12050RS05, Insert: RPHT1204M0EN-G
Cutting conditions	: vc = *40m/min* fz = *0.3mm/t* ap = *2mm* ae = *30mm* Wet

New PVD Coating Layer Features

ABSOTECH **PVD**

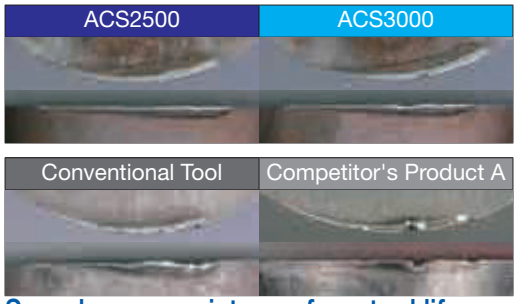


Ultra-fine Grained B Additive
- New AlTiBN coating, with an ultra-fine coating structure, achieves high strength and toughness
- Outstanding chipping resistance and wear resistance

High Adhesion Strength
Significantly improved coating adhesion and more than 2x conventional chipping resistance

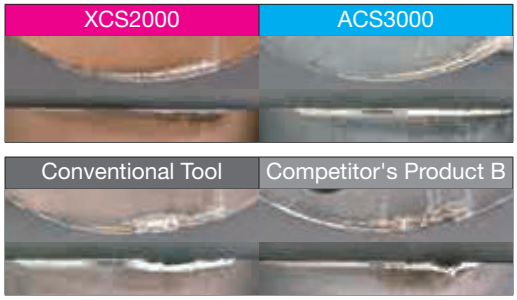
Applicable Grades: ACS2500, ACS3000

After cutting for 20 minutes



Superb wear resistance for a tool life 1.5 times greater than that of conventional tools and competitor's products

After cutting for 7.9 minutes



Superb fracture resistance for a tool life 1.4 times greater than that of conventional tools and competitor's products

Recommended Cutting Conditions

ISO	Work Material		Hardness	Chipbreaker	Cutting Speed vc (SFM) Min. - Max.	Feed Rate fz (IPT) Min. - Max.	Grade
S	Exotic Alloy	Heat-Resistant Alloy	—	G	85 - 180	.006 - .014"	ACS2500/ACS3000
		Ti Alloy	—	G	105 - 320	.006 - .014"	ACS2500/ACS3000
M	Stainless Steel	SUS430 and Others (Martensitic/Ferritic)	200HB	G	380 - 630	.006 - .018"	ACS2500/ACS3000
		SUS403 and Others (Martensitic/Hardened)	240HB	G	350 - 560	.006 - .018"	ACS2500/ACS3000
		SUS304, SUS316 (Austenitic)	180HB	G	410 - 685	.006 - .018"	ACS2500/ACS3000

Note
· The recommended cutting conditions may not be practical depending on the operating conditions (e.g. machine, work material shape, clamping system).
· For groove milling, calculate the feed rate at around 70% of the above values.
· The cutting conditions above are a guide. Actual conditions will need to be adjusted according to machine rigidity, work clamp rigidity, depth of cut and other factors.

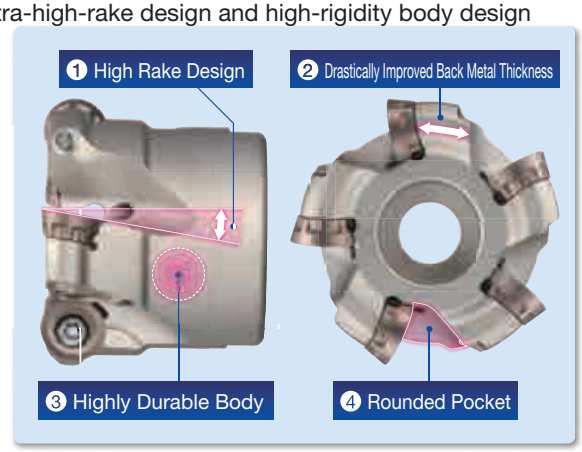
N·m Recommended Tightening Torque (N·m) ★Worldwide Warehouse Item

■ General Features

Wave Radius Mill RSX is a radius cutter that enables stable machining even when using machines with low clamp rigidity, thanks to a body design that achieves excellent sharpness and rigidity.
Lineup of ACM Series grades for stainless steel/exotic alloy, ACP200 grade for steel and ACK300 grade for cast iron to suit a wide range of work materials.
RSX08000 and RSX20000 lineup extended to support a wide range of machining.

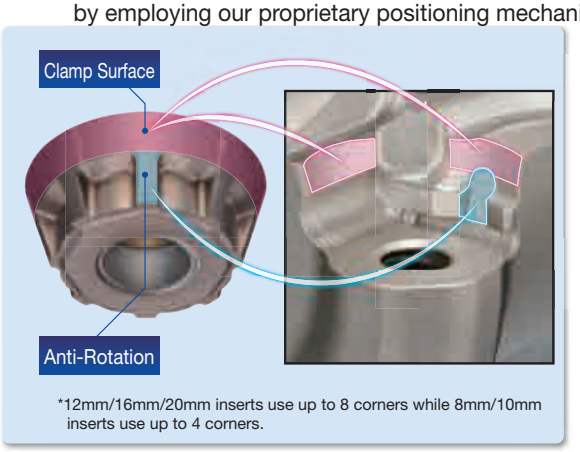
■ Low-resistance, Low-vibration Design

Achieves low-resistance, low-vibration machining thanks to ultra-high-rake design and high-rigidity body design



■ Excellent Operability

Enables easy corner control with high accuracy and operability by employing our proprietary positioning mechanism



*12mm/16mm/20mm inserts use up to 8 corners while 8mm/10mm inserts use up to 4 corners.

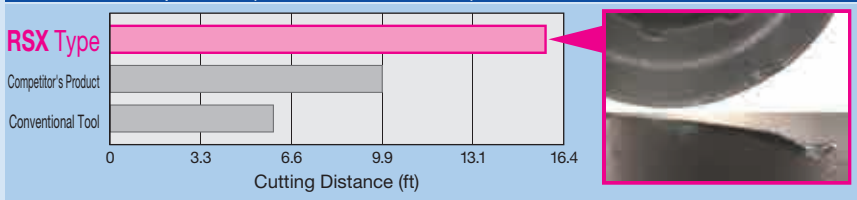
●: Inch in stock, Blank: Not available

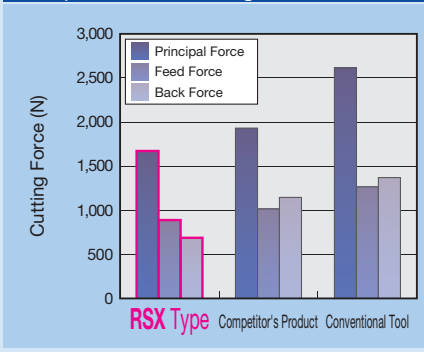
■ Cutting Performance

Tool Life Comparison (Fracture Resistance)



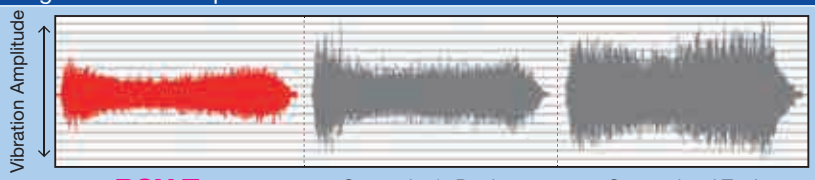
Achieves a tool life approximately 1.6 times longer than that of our competitors' products

Comparison of Cutting Force



Part Material: 304 Stainless Tool: ø50
Cutting Conditions: Vc = 656 SFM, fz = 0.0197”
ap = 0.08”, ae = 0.40”, Wet

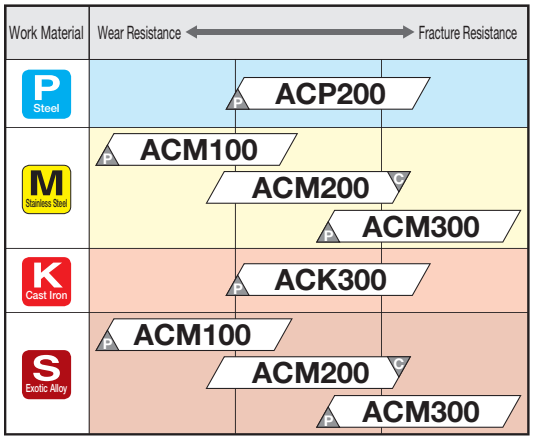
Cutting Vibration Comparison



Reduced by approximately 15% compared to competitors' products

■ Long, Stable Tool Life

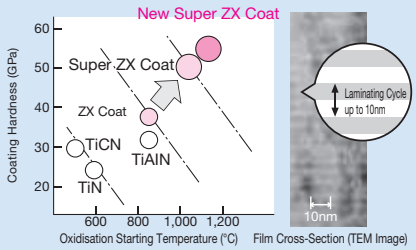
Adopts ACP200 grade for steel and ACK300 grade for cast iron machining, enabling milling of steel, stainless steel, cast iron and exotic alloys



The letters "C" and "P" at the end of each grade indicate the coating type.
C: CVD, P: PVD, Blank: Uncoated

P ACP200/ACM100/ACM300/ACK300

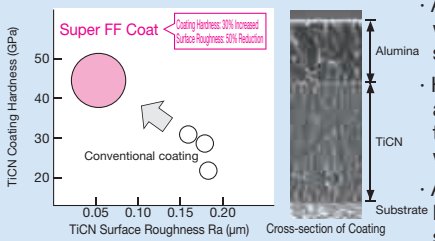
NEW SUPER ZX COAT



- Compared to conventional tools, the coating hardness has been increased by 40% and the oxidization starting temperature has been increased by 200°C
- Enables more than 1.5 times the machining speed and efficiency of conventional tools
- Achieves more than double the tool life of conventional tools under the same cutting conditions

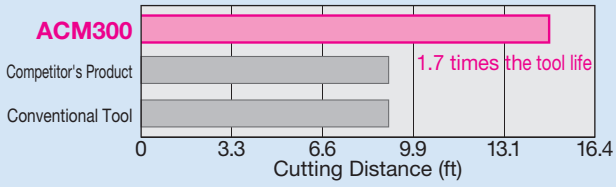
C ACM200

SUPER FF COAT



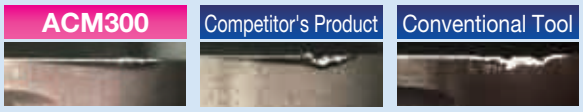
- Achieves excellent chipping resistance with smooth coating and our coating stress control technology
- High-speed, high-efficiency machining at a level more than 1.5 times higher than conventional tools is possible with a high hardness coating layer
- Achieves more than double the tool life of conventional tools under the same cutting conditions

Tool Life (304 Stainless Machining)

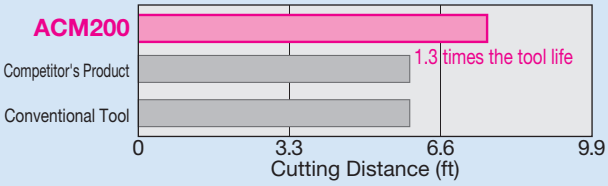


Cutter: RSXF12050RS
Insert: RDET1204M0EN-G
Cutting Conditions: vc = 656 SFM, fz = 0.02” IPT
ap = 0.08”, ae = 0.40” Wet

(Cutting Distance: 8.86ft)

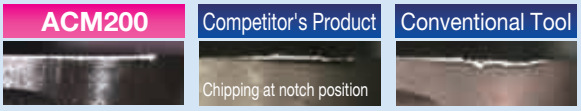


Tool Life (17-4 PH Machining)



Cutter: RSXF12050RS
Insert: RDET1204M0EN-G
Cutting Conditions: vc = 492 SFM, fz = 0.012 IPT
ap = 0.08”, ae = 0.40” Wet

(Cutting Distance: 5.91ft)

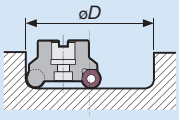


■ Machining Applications

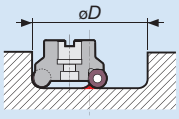
Can be used for various types of high-efficiency machining such as deep shoulder milling of molds, ramping, and helical milling.

Precautions for Helical Milling

Standard Diameter

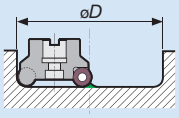


Standard Diameter or Below



Center uncut portion cannot be removed with the same cutter.

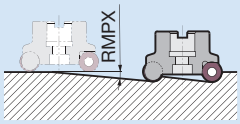
Standard Diameter or Above



Center uncut portion can be removed by traverse cutting with the same cutter.

Precautions for Ramping

Use at the RMPX below or lower.



Recommended Values for Helical Milling and Ramping

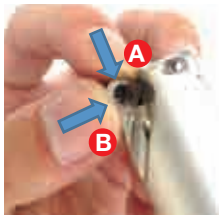
■ Precautions for Mounting Inserts



Hold down the insert from the A and B directions and fasten the screw.

Precautions for RSX08000 Type

Align either insert rake face marking position C with the marking position D on the body.

■ General Features

The WRCX Wave Radius Mill is a versatile, high-efficiency cutter that is suited to various types of machining such as deep shoulder milling of molds, ramping, and helical milling. Furthermore, a wide selection of chipbreakers and grades covers a wide range of work materials, from steel to non-ferrous metals.

■ Features

- Durable body with special surface treatment offers significantly improved tool life and reliability.
- Superb chatter resistance with anti-vibration edge design.
- All sizes come with coolant holes preventing chip build-up and jamming.
- Sturdy screw clamp with Torx Plus screw insert mounting ensures stable machining.

■ Product Range

	Metric Sizes	O.D. (mm)	# of Teeth
Shellmill	**WRCX(F)12000R(S)**	ø40 to ø80	4-6
	WRCX(F)16000R(S)	ø63 to ø100	3-6
	WRCX20000R(S)	ø125 to ø160	5-6
Endmill	**WRCX08000E**	ø20 to ø25	2-3
	WRCX10000E	ø25 to ø32	2-3
	WRCX16000E	ø40 to ø50	2-3
Modular	**WRCX08000M**	ø20 to ø25	2-3
	WRCX10000M	ø25 to ø32	2-3

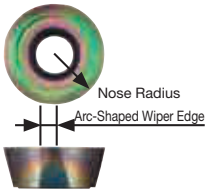
Inch Sizes	O.D. (Inch)	# of Teeth
WRCX30000R	ø2.000"	4
WRCX40000R	ø2.0 to ø4.0"	4-6
WRCX60000R	ø3.0 to ø6.0"	5-8
WRCX80000R	ø4.0 to ø6.0"	6-8
WRCX30000EW	ø1.0 to ø1.5"	2-4
WRCX30000ELC	ø1.0 to ø1.5"	2-4
WRCX40000EW	ø1.25 to ø1.5"	2-3
WRCX40000ELC	ø1.25 to ø1.5"	2-3

■ Abundant Insert Series

- In addition to conventional WRC Type inserts, the new lineup includes non-ferrous metal inserts and surfing inserts

Non-Ferrous Metal Inserts QPET ○○○○○○ PPFR-S

- Good surface roughness with arc-shaped wiper edge
- Sharp corners
- Four-cornered insert

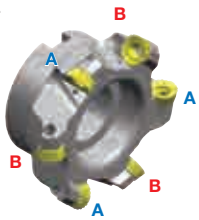


Surfing Insert QPMT ○○○○○○ PPER-R

- Cutting edges feature unique rippled design
- Four-cornered insert
- Low cutting force, enabling use on low-rigidity machines as well

*Use in combinations that alternate cutting edge **A** and cutting edge **B**.
(Only useable on cutters with an even number of cutting edges)

(Position 0°) (Position Rotated 90°) (Shape Created)



Shift the phase in 90° increments to mount inserts

- Maximum Allowable Spindle Speed when Milling Non-Ferrous Metal (Unit: RPM)

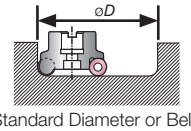
Cutter Dia. DC(*mm*)	Insert Cat. No. QPET10·····-S	QPET12·····-S	QPET16·····-S
25	28,000		
32	25,000		
40		22,000	15,000
50		20,000	14,000
63		18,000	13,000
80		16,000	12,000
100			10,000

Even if the speed used is within the maximum allowable revolution speeds listed above, abnormal vibrations may occur due to machine rigidity or other factors. Therefore, it is advisable to start operation at half the maximum allowable revolution speed and increase the speed gradually while checking for abnormalities.

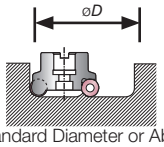
■ Usage Precautions

- Precautions for Helical Milling

Standard Diameter

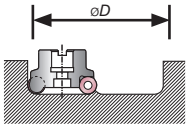


Standard Diameter or Below



Center uncut portion cannot be removed with the same cutter.

Standard Diameter or Above



Center uncut portion can be removed by traverse cutting with the same cutter.

- Precautions for Ramping
  - Use at the RMPX below or lower.

N·m Recommended Tightening Torque (N·m)

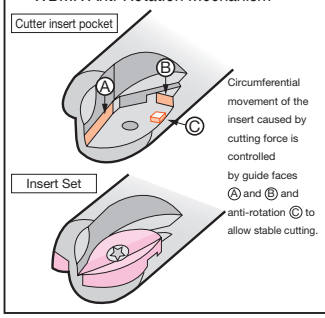
3D Profile Roughing

■ General Features

A lineup of ø.750" to ø2.000" ballnose endmill models for 3D profile roughing of die molds and machine parts.

● WBMR Anti-Rotation Mechanism



WBMR
(ø.750" to ø2.000")
(ø20 to ø50mm)

(WBMR2250S)

WBMR-L
(ø1.000" to ø1.250")
(ø20 to ø50mm)

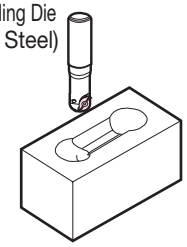
(WBMR2500SL)

■ WBMR2000 / 2000L (ø.750" to ø2.000")

- Wave-shaped high rake angle insert design achieves a sharp cutting edge and low resistance
- Economical M-class insert with strong cutting edge
- Anti-rotation guides prevent insert from slipping during machining
- Integrated insert shape is used for large diameter cutters, enabling easier tool management

■ Application Examples

● Cold Molding Die (D3 Tool Steel)



Evaluation
Flank wear width after continuous cutting for seven hours was less than competitor's product. Stable cutting was observed.

WBMR2200S (ø20)
Insert Grade: ACZ350
Cutting Conditions
n = 2,200min^{-1}
v_f = 500mm/min
Depth of Cut: 0.3 to 2mm
Insoluble Cutting Oil

■ General Features

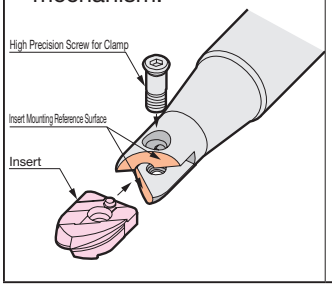
A lineup of ø0.5" to ø1.25" ballnose endmill models for 3D profile finishing of die molds and machine parts.

3D Profile Finishing

■ WBMF10000 Type (ø0.5" to ø1.25")

- Simple but precise clamping design
- Original large helix angle design
- Sharp cutting edge that produces good surface roughness
- Excellent wear resistance with Super ZX Coat

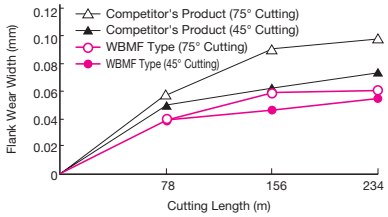
● WBMF Type clamp mechanism.



WBMF1000

■ Performance

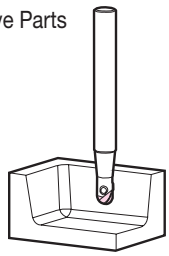
● Insert Life



Results
WBMF Type outperforms competitors' products in most processes including plan profiling, with better wear resistance.
Part Material: 1050
Machining Method: Ramping (45°, 75°)
Cutting Conditions
n = 2,000 RPM
v_f = 78.74 IPM
a_p = 0.012"
p_f = 0.024"
Dry

■ Application Examples

● Mold for Automotive Parts (Injection Mold)



Evaluation
Much better finishing as compared to competitors' products, with polishing time required reduced by half.
WBMF1000 Type
Work Material: 1055
Process: Contouring
Cutting Conditions
n = 2,500 RPM
v_f = 31.5 IPM
a_p = 0..028"
Overhang = 5.9"
Wet

N·m Recommended Tightening Torque (N·m)

■ Features

- ● Side Cutter Suitable For A Variety Of Applications
  Made-to-order bodies possible with cutting width of 17mm and up.
  Suitable for various applications such as groove milling and shoulder milling.
- ● Utilizes Low Resistance and Low Vibration Milling
  Design emphasizes cutting edge sharpness with +10° inclination angle.
  Excellent cutting edge sharpness suppresses chatter to enable stable machining.
- ● Excellent Machined Surface Quality
  Proprietary insert array design minimizes joint steps at the groove bottom for excellent machining quality.
- ● Neutral-handed 4-cornered Insert
  Easy management with neutral-handed insert design that eliminates the need to align right-hand and left-hand inserts.

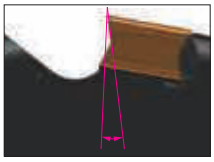
Standard design CW upper limit value varies with insert.

■ Sharp Edge Design

Design emphasizes cutting edge sharpness with +10° inclination angle.
Excellent cutting edge sharpness suppresses chatter to enable stable machining.

Inclination Angle



True Rake Angle

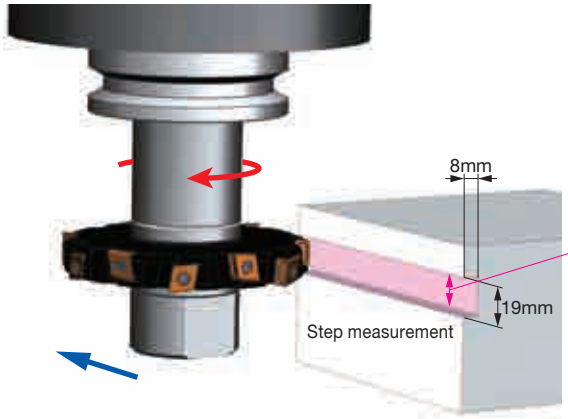
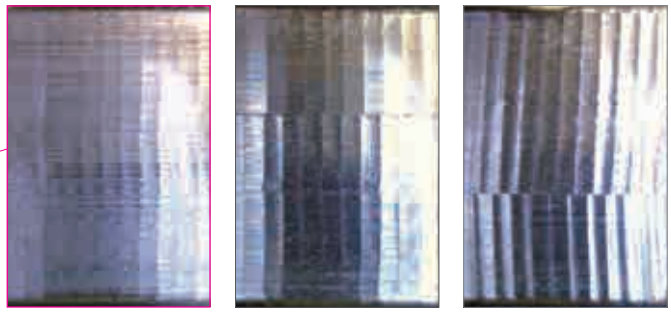
● Small Joint Steps At Groove Bottom

Proprietary insert array design minimizes joint steps at groove bottom for excellent visual quality





Less than 0.0004" step | Step 0.0010" | Step 0.00094"

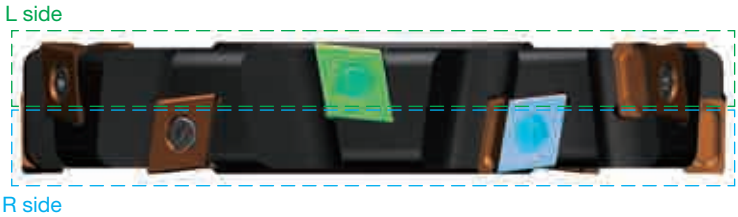
Machine	: Vertical Machining Centre BT50, Work Material: 1050
Tool	: TGC 13125W19Z12RS (ø125, Width of Cut 19mm, 12 teeth)
Insert	: TGCX 130708PNEN-G (ACU2500)
Cutting Conditions	: vc = 656 SFM, fz = 0.0078"/t, ap = 0.748", ae = 0.315", Down Cut, Dry

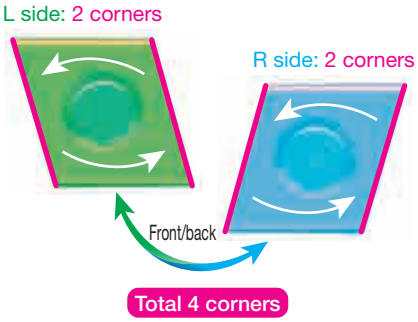
Excellent visual quality

*Results of in-house evaluation.

● Neutral-handed 4-cornered Insert

Easy management with neutral-handed insert design that eliminates the need to align right-hand and left-hand inserts



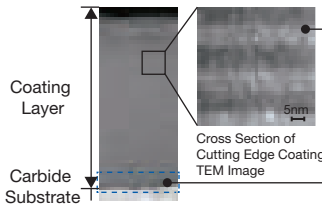


■ Grade Features

Work Material	Grade	Coating Thickness (μm)	Features
P M K S	ACU2500	3	Utilizes ABSOTECH™ coating technology with excellent wear and chipping resistance. Its carbide substrate, with excellent fracture and wear resistance, achieves stable and long tool life for a variety of work materials.

Coating Layer Features

ABSOTECH — PVD



New Super Multi-Layered Structure
Higher hardness and twice the conventional wear resistance due to a fine crystal structure AlTiCrBN-based nano-layered coating

High Adhesion Strength
Significantly improved coating adhesion has more than twice the chipping resistance of conventional coatings

■ Grade Application Range (TGC type)

Work Material		Finishing to Light Cutting	Medium Cutting	Rough to Heavy Cutting
P Steel	Coated Carbide	ACU2500		
M S	Coated Carbide	ACU2500		
K Cast Iron	Coated Carbide		ACU2500	

The letter "P" at the end of each grade indicates the coating type. ▲: PVD

N·m Recommended Tightening Torque (N·m)

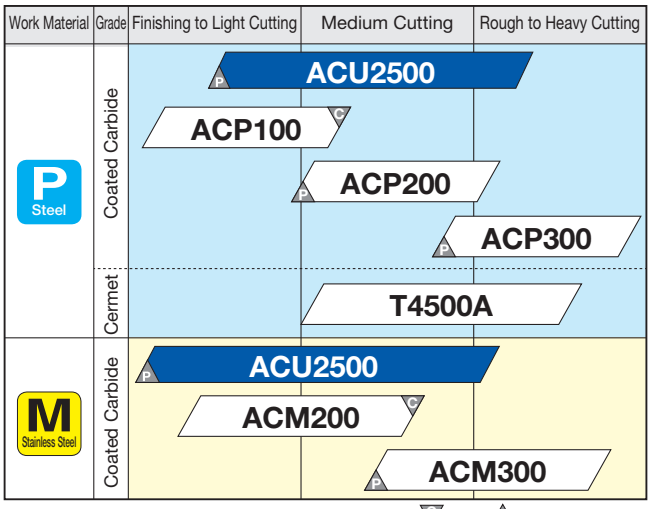
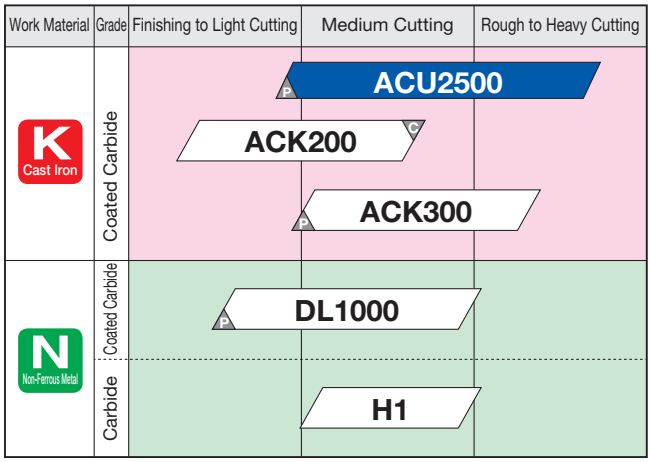
■ General Features

The WaveMill WFXC Series is a chamfering tool that uses a WFX series insert. A wide variety of grades support various work materials.

■ Grade Application Range



The letters "C" and "P" at the end of each grade indicate the coating type. C: CVD, P: PVD, Blank: Uncoated



■ Precautions for Use

Chamfering tools use a straight cutting edge that enables the chamfering range to be changed depending on the nose radius (RE) of the insert mounted to the body.
Work diameter: Use within the range shown in the table below, no lower than DC1 and no higher than DC2.
Depth of cut: cutting to a depth shown by the distance from the tool tip (a) in a straight line to the cutting edge. (b) is possible.

Recommended Cutting Conditions

ISO	Work Material	Hardness	Cutting Speed v_c (m/min) Min. - Max.	Feed Rate f_z (mm/t) Min. - Max.
P	General Steel	180 to 280 HB	150-250	0.05-0.15
	Mild Steel	≤ 180HB	180-350	0.10-0.20
	Die Steel	200 to 220 HB	100-200	0.05-0.15
M	Stainless Steel	-	150-250	0.05-0.15
K	Cast Iron	250HB	100-250	0.05-0.15

Note: The cutting conditions above are a guide. Actual conditions will need to be adjusted according to machine rigidity, work clamp rigidity, depth of cut and other factors.

N·m Recommended Tightening Torque (N·m)

ALNEX ANX

■ Features

- Drastically Reduced Runout Adjustment Time
  Simple screw-fastening structure enables fine adjustments to be made easily
- Through-Tool Coolant
  Secures a supply of coolant to the cutting edge and breaks chips thoroughly
- Lightweight Aluminum Alloy Body
  Utilizing aluminum alloy to achieve a total weight of less than 2.87lbs for a ø125mm cutter with 22 teeth.
- Introducing the High-strength CVD Single Crystal Diamond SCV10 Wiper Blade: WS

Series

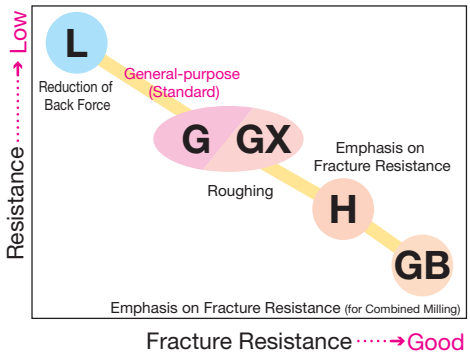
■ Blade Selection Reference

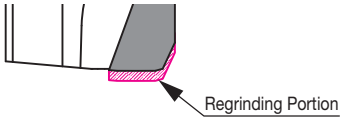


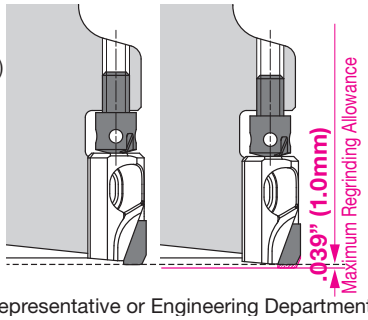
Sumitomo Services Offering in USA!

- Pre-setting
- Insert Reconditioning

Benefits of Reconditioning

- Reduces running costs by drastically increased insert regrinding allowance (to .039" / 1.0mm)
- Assuming .008" (0.2mm) of regrinding each time, an edge can be reground up to 5 times.
(*Peripheral edge cannot be reground.)





For service inquiries, please contact local Sumitomo Sales Representative or Engineering Department

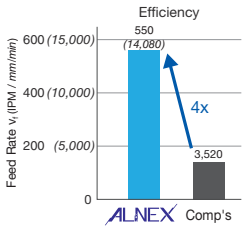
Competitor's

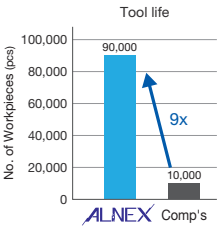
Part Material: ADC12
Cutting conditions:
v_c = *2,500m/min*,
f_z = *0.05mm/t*,
a_p = *0.5mm* Wet
Competitor: v_c = 8,200 SFM,
f_z = 0.002 IPT, a_p = 0.02"

■ Application Examples

Machine: Vertical Machining Center BT30, Part Material: ADC12 Automotive Component
Tool: ANXA 16125R22 (ø125, 22 teeth, aluminum alloy body *Total weight with arbor 1.75kg)
Insert: ANB 1600R-G (DA1000)
Cutting conditions: v_c = 10,300 SFM (*3,142m/min*),
v_f = 554 IPM (*14,080mm/min*),
a_p = .031" (*0.8mm*) Wet

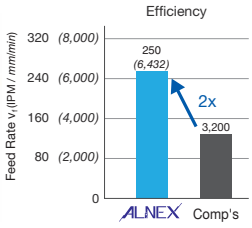
4 times the efficiency and 9 times the tool life

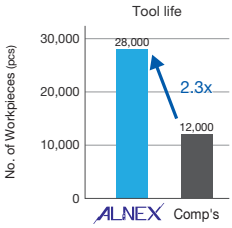




Machine: Vertical Machining Center HSK63, Part Material: ADC12 Cylinder Head Tool: ANXS 16063RS12 (ø63, 12 teeth, steel body)
Insert: ANB 1600R-G (DA1000)
Cutting conditions: v_c = 5,200 SFM (*1,583m/min*),
v_f = 250 IPM (*6,432mm/min*),
a_p = .02" (*0.5mm*) Wet

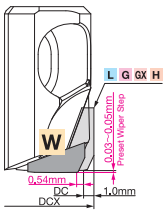
2 times the efficiency and 2.3 times the tool life





■ Precautions when Using Wiper Blades

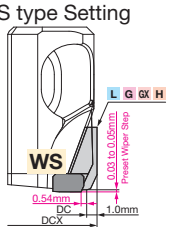
· W type Setting



⚠ Precautions

In order to maintain cutter balance when using the W type wiper blade, use a cutter with an even-number of cutting teeth and place another W type wiper blade at the opposite teeth position.

· WS type Setting



⚠ Precautions

(For more details, refer to the instruction manual included with the product)

In order to maintain cutter balance when using the WS type (SCV10 wiper blade), use a cutter with an even-number of cutting teeth and place another WS type wiper blade (or dummy blade ANBD) at opposite teeth positions.

*The dummy blade is dedicated for use with WS type.

*The maximum allowable spindle speeds are set to prevent the inserts from dislodging by centrifugal force.

■ General Features

The HF Type high-efficiency aluminum alloy cutter employs a unique blade design to achieve machining without burrs.
New HFFH with coolant holes is now available as a BBT30 (BIG-PLUS™) arbour integrated version.

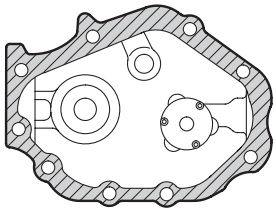
Work Material

· Aluminum and aluminum alloys
· Other non-ferrous metals
(Not suited for cast iron or steel.)

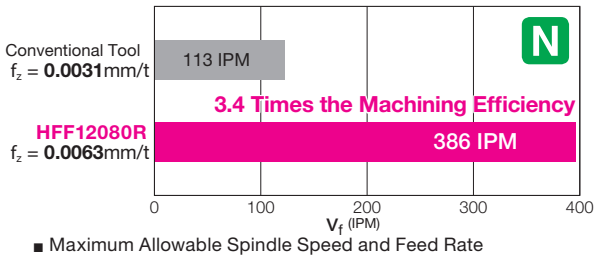
■ Features

● Achieves high-efficiency milling with v_f of over 787 IPM thanks to its multi-blade design (3 edges per inch)

High-feed, High-efficiency Milling by Multi-edge Design

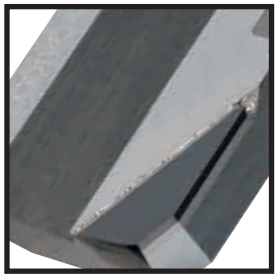


Workpiece: Aluminum Case (Frame Milling)
Tool: **HFF12080R-25.4** (ø80 10-flute),
Conventional Tool (ø80 6-flute)



■ Maximum Allowable Spindle Speed and Feed Rate

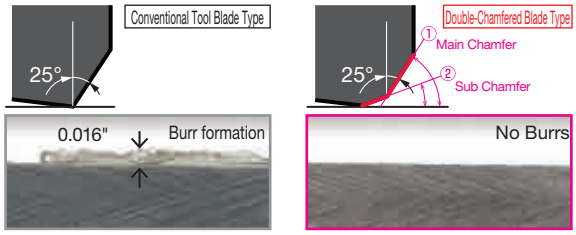
Cutter Dia. (mm)	nmax (RPM)	v_c (SFM)	f_z (IPT)	Maximum Number of Teeth	v_f (IPM)
ø80	11,000	9,065	up to 0.008"	10	up to 866"
ø100	9,500	9,787	up to 0.008"	12	up to 897"
ø125	7,500	9,659	up to 0.008"	15	up to 886"



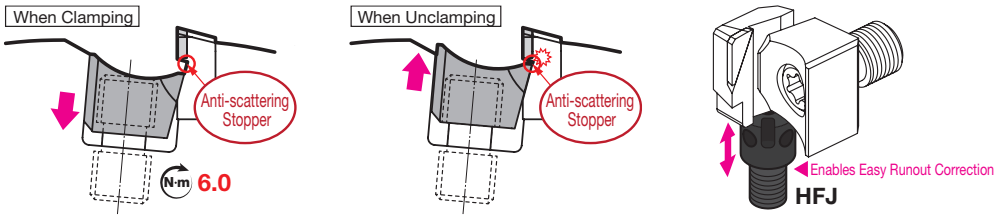
● Reduces burrs by using a double-chamfered blade

Drastically reduces burrs by preventing the plastic deformation that causes burrs.

Work Material: **A6061** Sheet Metal
Cutting Conditions: v_c = **10,308 SFM**, f_z = **0.004 IPT**, a_p = **0.02"**, Dry



● Wedge clamp with anti-scattering mechanism ensures safety and operability

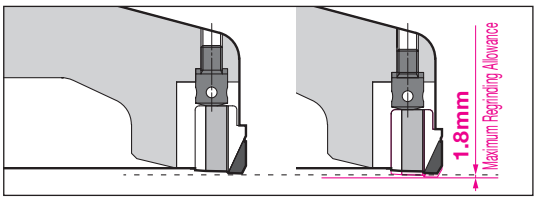


Ensure that the maximum allowable spindle speed (*n* max) specified for each cutter diameter is not exceeded. (See the table at upper right)

● Reduces running costs by drastically increasing blade regrinding allowance (to 0.071")

Assuming 0.008" of regrinding each time, an edge can be used up to 10 times.

(Given conditions of normal wear with a_p = **0.06"** or less)



The regrinding amount has been drastically increased compared to conventional screw-lock types

● Internal coolant improves chip evacuation performance (HFFH Type, HFFH-BBT30 Type)

The internal coolant effectively prevents chips from becoming clogged or biting into the work material and achieves longer tool life. (Use an internal coolant compatible arbor)

*1 BIG-PLUS™ is a registered trademark of BIG DAISHOWA Co., Ltd.
*2 Can also be used with BT30 spindle machines.

N·m Recommended Tightening Torque (N·m)

■ Chipbreaker Selection

Work Material	N				
Type	L Type	G Type	GX Type	H Type	W Type
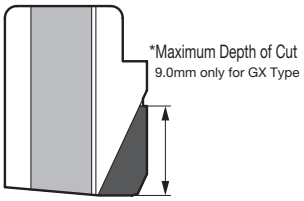
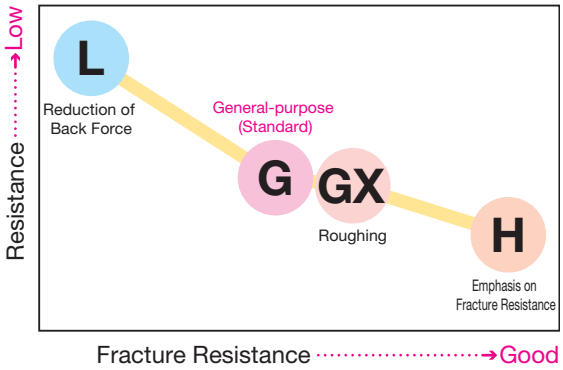
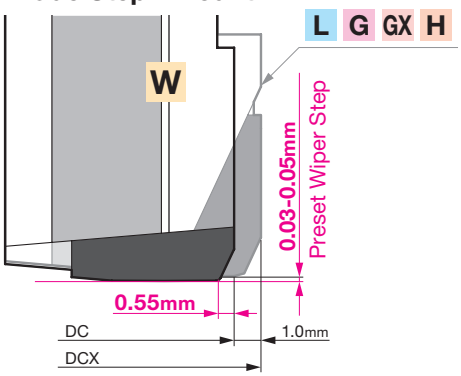
Cutting Edge Shape					Features	Low Resistance	Standard	Long Edge	High Strength	Wiper
Applications	Reduction of Back Force	General-purpose	Roughing	Emphasis on Fracture Resistance	
Edge Length (*)	0.236”	0.236”	0.354”	0.236”	



■ Chipbreaker Selection Guide

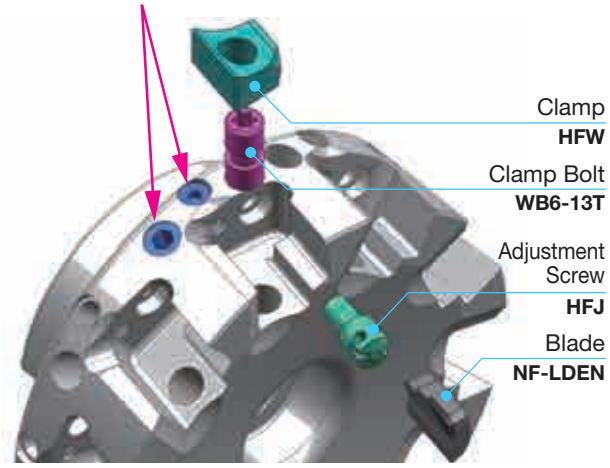


■ Wiper Blade Step Amount



■ Structure of HF

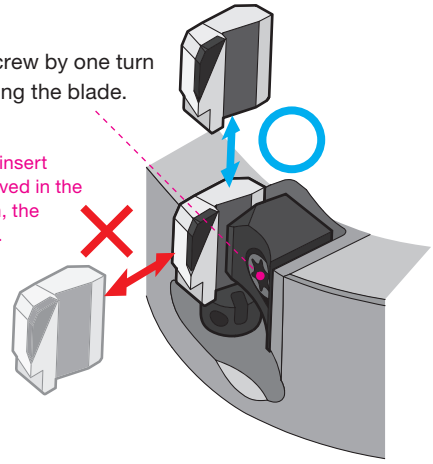
The axial set screw and balance adjustment screw hole have an embedded special part that prevents the insertion of screwdrivers or hex wrenches.



■ Blade Mounting Direction

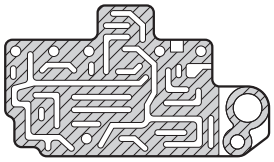
Loosen the screw by one turn before removing the blade.

⚠ Note that if the insert is forcibly removed in the wrong direction, the part may break.



■ Application Examples

● Workpiece: Automotive Component		Sumitomo
Work Material: Aluminum Alloy	Body	HFFH12100R-25.4
	Blade Cat. No.	NF-LDEN12T3ZDTR-H
	Grade	DA1000
	Number of Teeth	12
	v_c(SFM)	6,181
	n(RPM)	6,000
	v_f(IPM)	236”
	f_z(IPT)	0.002”
	a_p(inch)	0.008”
	Coolant	Wet (Internal Coolant Supply)
	Results	Achieves 3,600 units, double the tool life of conventional external coolant supply types. Good machined surface



● Workpiece: Engine Component		Sumitomo
Work Material: Aluminum Alloy	Body	HFFH12125R-31.75
	Blade Cat. No.	NF-LDEN12T3ZDFR-G
	Grade	DA1000
	Number of Teeth	15
	v_c(SFM)	9,663
	n(RPM)	295
	v_f(IPM)	266”
	f_z(IPT)	0.0024”
	a_p(inch)	0.08”
	Coolant	Wet (Internal Coolant Supply)
	Results	In contrast to conventional external coolant supply types, the tool life has reached 1.7x greater at 17,000 units and creates finer chips

RF Series

■ General Features

The RF cutter for aluminum alloy has a lightweight body designed for high-speed, high-performance roughing to finish milling of aluminum alloy and other non-ferrous metals.

■ Work Material

- Aluminum and aluminum alloys
- Other Non-Ferrous Metals

(Not suited for cast iron or steel.)

■ Features

- From Roughing to Finishing Processes: Roughing: Economical carbide insert / Finishing: High-precision SUMIDIA insert
- Strong and Lightweight Body: Special aluminum alloy body. 40% lighter than steel cutters. Hard anodizing. Improved efficiency with higher spindle speeds, lower spindle loads and shorter tool change time
- Safety Design: Prevents inserts from dislodging from cutter due to centrifugal force. (Speeds must be within max. recommended conditions) To prevent warping, wedges are not used in the cutter construction
- Easy Runout Adjustment: External setting gauge is used for easy tool presetting. High-precision cutter construction - units fitted are within 10μm runout even before setting

■ Application Examples

Workpiece (Work Material)	Tool Cutting Blade (Insert Grade)	Cutting Conditions v_c = Cutting Speed (SFM) v_f = Feed Rate (IPM) a_p = Depth of Cut (inch)	Results
Case (ADC12)	RF4160R SUMIDIA Blade (DA2200)	v_c = 9,843 v_f = 225 a_p = 0.004"	Finished Surface Roughness: Ra=0.2μm, Number of Workpieces: 30,000 pcs (30x tool life of carbide inserts)
Contact Surface of Transmission Case (ADC12)	RF4125R SUMIDIA Insert (DA1000)	v_c = 9,843 v_f = 300 a_p = 0.06"	Finished Surface Roughness: Ra=0.3μm, Number of Workpieces: 20,000 units
Contact Surface of Cylinder Head (AC4C)	RF4250R Carbide Insert (H1)	v_c = 6,562 v_f = 296 a_p = 0.14"	Rough Cutting Number of Workpieces: 10,000 units

● Maximum Allowable Spindle Speed

Cat. No.	*n* max (RPM)
RF4080R	17,000
RF4100R	15,900
RF4125R	13,500
RF4160R	11,000

RF4315R	6,000

■ Finished Surface Roughness

- Process: Finish Milling
- Machine: Vertical Machining Centre
- Arbour: HSK63A
- Work Material: Si 10 to 12% Al Alloy
- Cutter: RF4100R 6-Flute (1 Wiper)
- Grade: SUMIDIA (DA1000)
- v_c = 16,372 SFM
- n = 15,900 RPM
- v_f = 450 IPMn
- f_z = 0.0047 IPT
- a_p = 0.0197", Wiper a_p = 0.0012"
- Dry

Rz (Highest Peak): 0.69μm Ra: 0.092μm

■ Recommended Cutting Conditions

Si content of 12.6% or less

ISO	Work Material	Hardness	Cutting Speed v_c (SFM) Min. - Max.	Feed Rate f_z (IPT) Min. - Max.	Insert Grade
N	Aluminum Alloy	-	6,560 - 16,400	0.002 - 0.008	DA1000 DA2200
		-	3,280 - 8,200	0.002 - 0.008	H1

Si content of over 12.6%

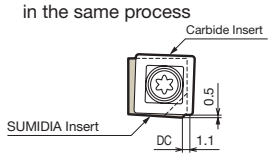
N	Aluminum Alloy	-	1,320 - 2,630	0.002 - 0.008	DA1000 DA2200
		-	660 - 1,320	0.002 - 0.008	H1

Note: The cutting conditions above are a guide. Actual conditions will need to be adjusted according to machine rigidity, work clamp rigidity, depth of cut and other factors.

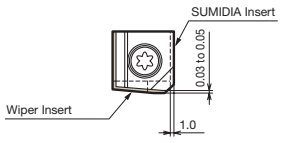
● Recommended Cutting Edge Position

We recommend positioning as in the figure below when mounting carbide inserts or SUMIDIA inserts (blades).

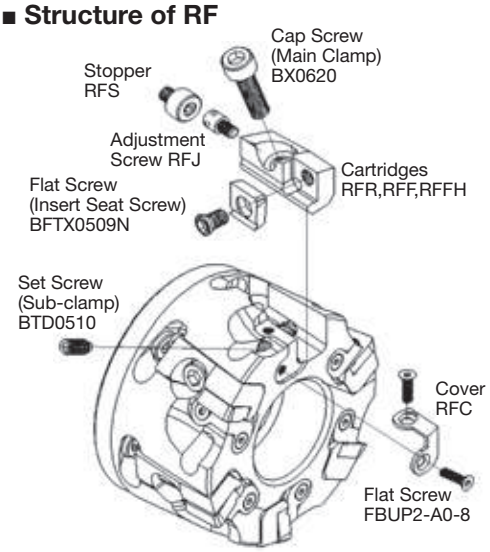
● When roughing and finishing in the same process



● When using wiper edge



■ Structure of RF



⚠ CAUTIONS (For more details, refer to the instruction manual included with the product)

As it is possible to mix different types of inserts/blades, it is important to take note of the following.

- Do not mix reground and new inserts or inserts with a different regrinding amount on the same cutter.
- Carbide and SUMIDIA inserts must be arranged alternately.
- Ensure proper balance by fixing the PCD inserts of the blades on opposite sides of the cutter.

■ General Features

The SRF small diameter aluminum alloy cutter is ideal for aluminum alloy machining on high-performance small machines.

■ Features

- Ideal for small machines
  Especially reliable on BT30 class small machines.
- From roughing to finishing processes
  Utilizes SUMIDIA DA1000 inserts
  with effective cutting edge length of 5mm
- Economical NF-type Inserts:
  NF Type SUMIDIA inserts with tough DA1000 grade lower tooling costs.
- High-speed Cutting with PCD-SUMIDIA:
  Maximum spindle speeds of up to n = 20,000 RPM
  (Actual spindle speeds must be set within the rotational limits of your machine and holder)
- Simple Runout Adjustment Mechanism:
  Simple insert direct mounting design
  for runout precision with easy fine adjustment

■ Application Examples

Workpiece (Work Material)	Tool Insert Cat. No. (Insert Grade)	Cutting Conditions n = Spindle Speed (RPM) v_f = Feed Rate (IPM) a_p = Depth of Cut (inch)	Results
Cam Case (ADC12)	SRF50R NF-SNEW09T3ADTR (DA1000)	n = 6,000 v_f = 95 a_p= 0.02"	12,000 pcs machined with no problems
Computer Case (ADC12)	SRF50R NF-SNEW09T3ADTR (DA1000)	n = 15,000 v_f = 295 a_p= 0.008"	2.5 times more efficient endmill operation
Differential Case (ADC12)	SRF63R NF-SNEW09T3ADTR (DA1000)	n = 8,000 v_f = 160 a_p= 0.02"	No obstructions on tool magazine when mounting ø63 cutter on small machines.

■ Recommended Cutting Conditions

Si content of 12.6% or less

ISO	Work Material	Hardness	Cutting Speed v_C (SFM) Min. - Max.	Feed Rate f_Z (IPT) Min. - Max.	Insert Grade
N	Aluminum Alloy	-	6,560 - 13,120	0.002 - 0.008	DA1000

Si content of over 12.6%

N	Aluminum Alloy	-	1,320 - 2,630	0.002 - 0.008	DA1000

Note The cutting conditions above are a guide. Actual conditions will need to be adjusted according to machine rigidity, work clamp rigidity, depth of cut and other factors.

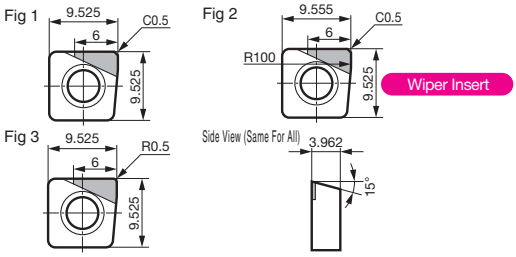
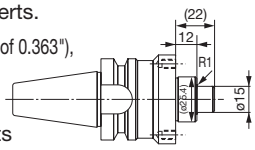
NF-SNEW09T3ADTR-U	●	▲	*2.2*	Wiper Edge	2
NF-SNEW09T3ADTR-R	●	▲	*2.0*	Nose Radius	3

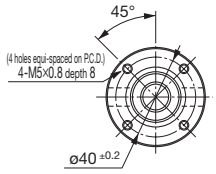


- Standard inserts and wiper inserts can be used on the same cutter body.
- Standard inserts with nose radius should be used where chatter is present. These cannot be used with wiper inserts.
- Inserts can be reground 3 times (up to minimum IC diameter of 0.363"), but the cutting edge height changes by the reground amount.
- Do not mix new and reground inserts or inserts with different regrind amounts on the same cutter.
- When using reground inserts, it is advisable to re-confirm cutting edge position with a tool pre-setter.



- Arbour for SRF30R, SRF40R

When using body SRF30R and SRF40R cutters, the arbor needs to be modified as shown above.



(1. Reduce part of the arbor's adapter shaft length from ø1.00" to ø0.590". Add 4 tap holes for (M5) mounting bolts.)
Use hex socket bolts M5 × 0.787" for securing the body.

■ General Features

WaveMill WAX type is a high speed and high efficiency cutter capable of processes from rough milling to finishing of non-ferrous metals such as aluminum alloy.

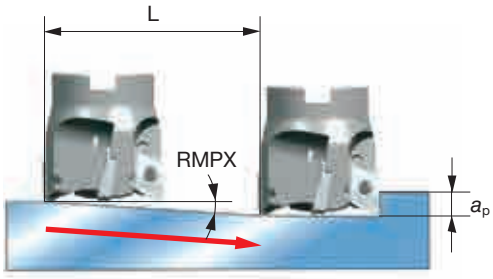
■ Features

- Ramping
- For Helical Milling
- Safety Design:
  - · Prevents dislodging of inserts caused
  - · by centrifugal force.
- Coolant Compatible:
  - · Coolant holes are a standard feature for the WAX series.
- Excellent Adhesion Resistance:
  - · Top rake face of the insert has a lapped finish.
  - · DLC Coat inserts are available for improved adhesion resistance.

■ Ramping

Maximum ramping angle (RMPX) depends on cutter diameter.
Minimum milling distance (L) for any depth of cut can be calculated by the equation below:

$$L = \frac{a_p}{\tan \text{RMPX}} \quad \text{(mm)}$$



■ Helical Milling

High-speed, High-efficiency Milling for Cast Iron

- High-Efficiency Milling of Gray Cast Iron
  - · Utilizes solid CBN - SUMIBORON BNS800 for high-speed cutting of v_c = 4,920 SFM.
  - · High speed roughing with depth of cut up to 0.118"
  - · Wiper insert for high-speed finishing
- Low Cost
  - · Economical double-sided insert with 8 usable corners
  - · Insert can be reground and used again
- Simple Runout Adjustment Mechanism
  - · Simple design for insert direct mounting
  - · Easy yet precise runout precision adjustment

■ General Features

Goal Mill Series cutters have been developed for high-efficiency machining and finishing of cast iron parts (such as engine cylinder blocks and transmission cases).

■ Features

- Special cutters for high-feed machining of cast iron
- Multi-teeth design (approx. 3 teeth per inch)
- Finishing cutters feature an easy-to-use function for edge runout fine adjustment
- Highly reliable cutter with tangential inserts for finishing
- Chipbreaker type inserts for low cutting force

Material	Applications	High-speed Finishing	Finishing to General Cutting	Interrupted Cutting	Applicable Cutters

Material	Applications	Light Cutting	General Cutting	Heavy Interrupted Cutting	Applicable Cutters
K Cast Iron	For Roughing	ACK100	ACK200	ACK300	GRHN

■ Grade Characteristic Values

Classification	Grade	Hardness	Transverse Rupture Strength (GPa)	Main Coating Components	Coating Thickness (μm)	Features
K Cast Iron	ACK260	92.6HRA	2.6	Super ZX Coat	3	· From finishing to general machining of cast iron and ductile cast iron. · Employs new super multi-layered PVD coating consisting of nanometer-thin layers of TiAlN and AlCrN. Combines with a tough, thermal-resistant substrate for long and stable tool life.
K Cast Iron	ACK280	91.7HRA	3.0	Super ZX Coat	3	· For heavy interrupted cutting and wet cutting of cast iron and ductile cast iron. · Employs new super multi-layered PVD coating consisting of nanometer-thin layers of TiAlN and AlCrN. · Coupled with an ultra-tough substrate for superior fracture resistance and thermal crack resistance during wet cutting.

- Check each of the fixed pocket milling inserts to find the one at the highest setting.
- Load the wiper cartridges into the face mill body and torque the cartridge mount screw
- Adjust the wiper cartridge using the axial adjustment screw so that it is .0010" ~ .0012" above the highest fixed pocket milling insert

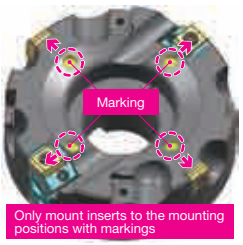
Precautions for Use of GFXC

GFXC can be used with fewer teeth attached. In this case, only mount inserts to the mounting positions with markings. Remove the screws from the mounting positions where inserts will not be mounted.



No. of GFXC inserts for all teeth mounted versus mounted number of teeth reduced.

Cat. No.	Diameter DC	Total No. of Teeth	Mounted No. of Teeth Reduced	Cat. No.	Diameter DC	Total No. of Teeth	Mounted No. of Teeth Reduced
GFXC13063RS/LS	*63mm*	4	**2**	**GFXC13160R/L**	*160mm*	12	**6**
GFXC13080R/L	*80mm*	6	**2**	**GFXC13200R/L**	*200mm*	16	**8**
GFXC13100R/L	*100mm*	8	**4**	**GFXC13250R/L**	*250mm*	20	**10**
GFXC13125R/L	*125mm*	10	**4**	**GFXC13315R/L**	*315mm*	24	**12**

The number of inserts mounted should always match either the "Total No. of Teeth" or "Mounted No. of Teeth Reduced" quantities.

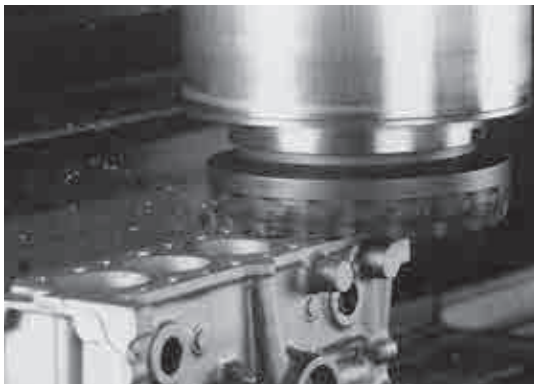
High-Feed Facemills



■ General Features

Sumitomo Electric Hardmetal High Feed facemills achieve high-performance milling particularly suited for cast irons, aluminum and light alloys. Cutting edge reference system design is rugged, simple and easy to maintain.
A range of facemills are available to suit various applications.

■ Series Common Features

- Dedicated cutter for high-feed machining of cast iron and light alloys
- Cutting edge reference system provides simple, easy and fast runout management.
- Fine pitch cutter design (*3 teeth per inch) is ideal for high-efficiency machining
  Cutting edge O.D. inch conversion (example: ø100 ≈ 4 inches x 3 = 12 blades)
- An excellent range of cutter designs and insert grades to suit various applications
- Quick change system enabling fast replacement of cutter

	Cat. No.	Specifications	Applicable Cutter Size
(1)	F Type/NF*	Quick Change System	*ø160mm* and below
(2)	2-piece	2-piece set indication	*ø200mm* and above
(3)		Two-piece cutter with centre bolt	

* The Quick Change System NF type is a made-to-order item. For details, please contact us directly.

Cutting Edge Reference System

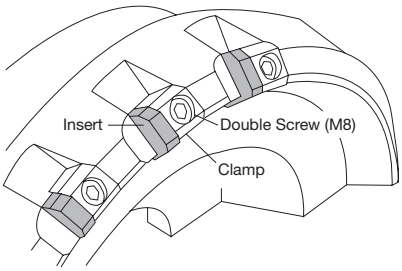
■ General Features

Conventional indexable cutters are designed to position and clamp two or three faces of the insert with locators, etc. The cutting edge reference cutter, on the other hand, retains the insert only with a clamp. (See Fig. 1) This system is adopted for our entire high-feed cutter series.

■ Features of the Cutting Edge Reference Cutter

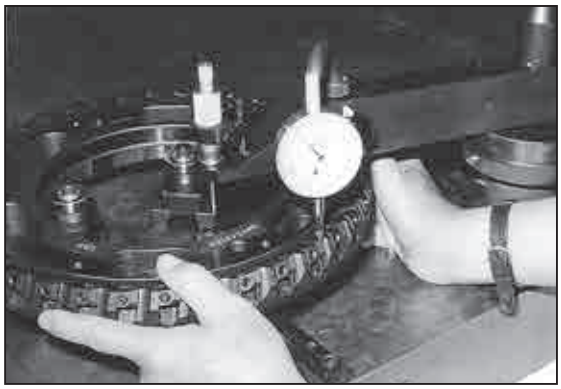
- Axial runout of the inserts is kept within 5 to 10μm to ensure stable surface roughness and longer tool life.
- Simple design with fewer parts compared to the locator type facilitates cleaning the typical cast iron machining dirt and is comparatively inexpensive.
- Fewer parts allow high-density cutter design, higher machining efficiency and longer tool life.

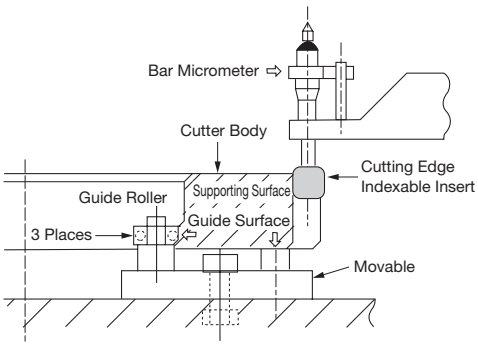
Fig. 1



■ Assembly Jig

Application of a special assembly jig (as shown in the figure below) is recommended to accurately assemble the cutting edge reference cutter.





■ Insert Assembly Guidelines

When mounting (assembling) the inserts, pay careful attention to the points noted below in ☐.

450	300	420	63.50	32	22	350	6	ø450

● Features and Applications

(1) Lightweight ring cutter body.
(2) Cutter can be changed without removing the bolt.
(3) A tapered spline system is used to connect the adapter to the cutter.
(4) Can be used for cutters over ø200.
(5) Effective when mounting several cutter body sizes on the same adapter.

450	355	440	**63.50**	32	22	405	ø450

● Features and Applications

(1) With one clamping bolt, the total weight of the two-piece cutter is lighter.
(2) Cutter can be replaced quickly - simply turn one bolt halfway to mount and remove.
(3) A tapered spline system is used to connect the adapter to the cutter.
(4) Can be used for cutters over ø200.

High Productivity Cast Iron Milling Cutter with 8 cutting edges

■ General Features

- Double negative milling cutter with positive cutting insert geometry
- High productivity shell mill for gray cast iron and ductile iron face milling
- Eight (8) cutting edges per insert
- Available in the grades: ACK100 and ACK200
- Unique positive chipbreaker insert provides less cutting force, more productivity and longer tool life

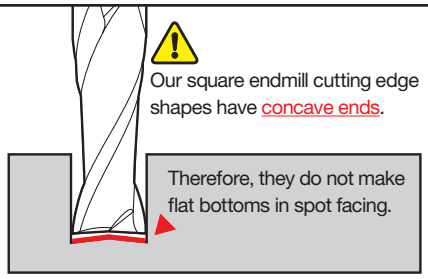
Material Selection Guide

Target Material (What to machine?)	Cutting Applications	Recommended Tool	Ref. Page
Steel, Cast Iron, Stainless Steel, Titanium Alloy	High Efficiency Machining Chatter Countermeasures	GSXVL GSV	I76,I78 I74
	Medium Finishing to Finishing (Good Machining Accuracy)	GSX	I40 to I72
	Roughing (Large Stock Removal)	GSXVL	I76,I78
Aluminum Alloy	All Aluminum Alloys	ASM	I82 to I84

Target Material (What to machine?)	Cutting Applications	Recommended Tool	Ref. Page
Steel, Cast Iron, Stainless Steel, Titanium Alloy	High Efficiency Machining Chatter Countermeasures	GSXVL GSV	I76,I78 I92
	Medium Finishing to Finishing (Good Machining Accuracy)	GSX	I90
	Roughing (Large Stock Removal)	GSXVL	I76,I94
	Stainless Steel, Titanium Alloy	SSEH SSEHVL	I102,I104 I98,I100

Target Material (What to machine?)	Cutting Applications	Recommended Tool	Ref. Page
Steel, Cast Iron, Stainless Steel, Titanium Alloy	General Machining	GSXB	I27, I112
Aluminum Alloy Copper Alloy	All Aluminum Alloys, Copper	SNB	I115, I116



If a flat bottom is required, we recommend using the **Flat Bottom MDF**.

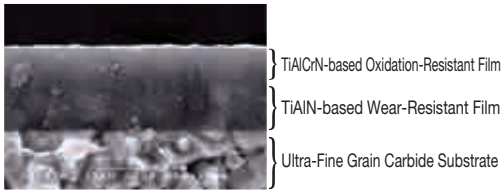
■ Endmill Coating

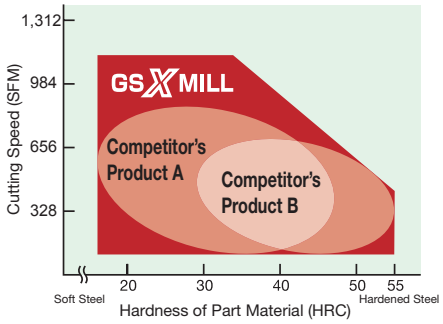
Coating Name	GSX Coat	ZX Coat	AURORA Coat	SUMIDIA Coat
Coating Type	TiAlCrN Type	TiAlN Type	DLC	Diamond
Wear Resistance	◎	○	○	◎
Adhesion Resistance	◎	○	◎	△
Thermal Resistance	◎	○	△	○
Coating Thickness	up to 2μm	up to 2μm	up to 0.5μm	up to 15μm
Features	Excellent thermal resistance and adhesion resistance	General-purpose	Low coefficient of friction and excellent adhesion resistance	Excellent hardness and wear resistance
Main Application	For general steel and stainless steel milling	For general steel and cast iron milling	For aluminum alloy and copper alloy milling	Milling of CFRP
Main Applicable Products	GSX/GSXB/GSXVL Type	UPMILL Type	ASM/SNB/SNB2 Type	SSDC Type

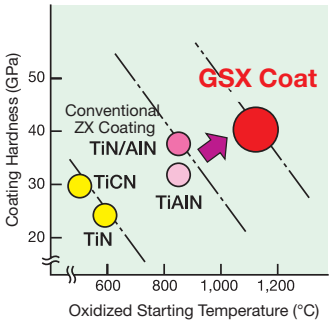
● GSX Coat

- Micro-grain carbide substrate provides high transverse rupture strength and excellent thermal shock resistance, improving reliability in wet cutting applications.
- Adopts GSX Coat for better wear resistance and thermal resistance, improving reliability and tool life when machining a wide range of work materials.

[Coating Structure]

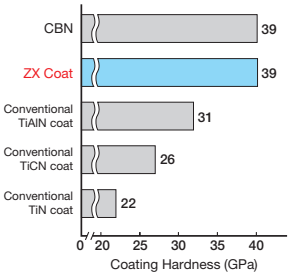


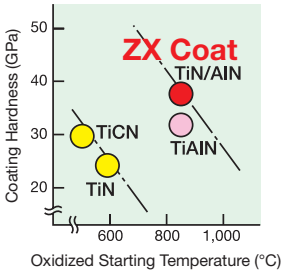




● ZX Coat

- Hardness almost equivalent to that of CBN
- Improvement in wear resistance, oxidation resistance and peel-off resistance
- Approx. 6 times longer tool life compared with uncoated products





● AURORA Coat

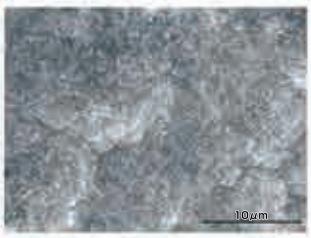
- Very smooth AURORA COAT results in low adhesion as well as good surface finish
- Low cutting force enables high feed machining and milling of low rigidity workpieces
- Ideal for machining non-ferrous metal/copper electrodes

AURORA Coat

Competitor's Diamond Coating

● SUMIDIA Coat

- Our original polycrystalline diamond coating technology achieves over 10 times higher wear resistance than uncoated carbide.
- Provides a micro-grain diamond film that provides the required combination of high strength and high wear resistance on smooth surfaces for CFRP milling

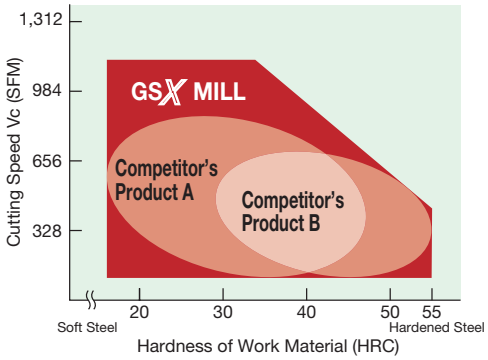


GSX MILL Series

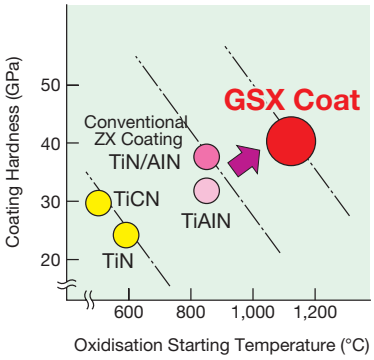
■ Features and Applications

- A wide selection from 3 types of cutting flute configuration and 4 cutting lengths to cover a wide range of applications.
- Micro-grain carbide substrate provides high transverse rupture strength and excellent thermal shock resistance, improving reliability in wet cutting applications
- GSX Coat has increased wear resistance and thermal resistance for improved reliability and longer tool life
- Large rake angle and unique flute design improve sharpness and chip evacuation
- Cutting teeth with gash land improve corner cutting edge strength
- New lineup of radius types and 4D size S types

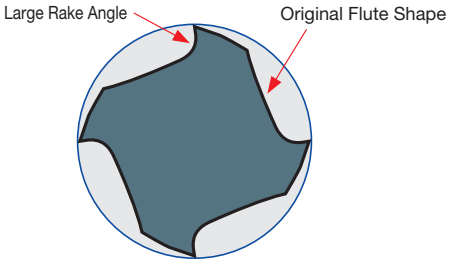
● Wear resistance



● Thermal resistance



● Improved chip evacuation

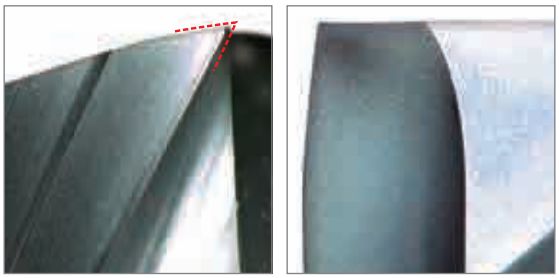


Large rake angle combined with our unique flute design improves sharpness and chip evacuation

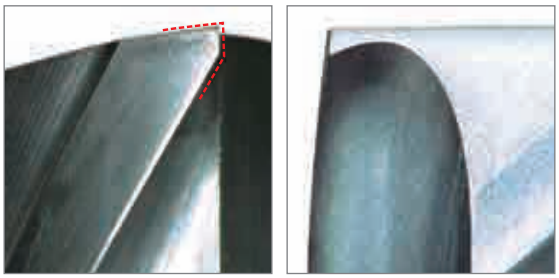
■ 2 cutting edge shapes, expanding machining applications

Sharper edge S type and fracture-resistant C type added to the 2D size series.

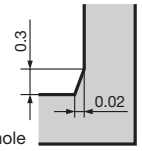
S Type Sharp Corner: Sharper Edge Design



C Type Gash Land: Fracture-Resistant Design



Note: When using endmills with gash land, some material remains as shown at right.
If you need sharp corners, use the S type.



Example: Corner on a ø10mm hole (Unit: mm)

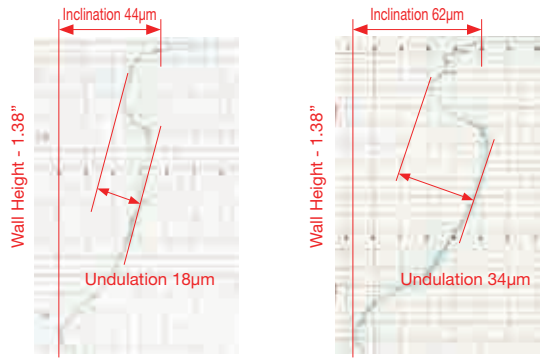
■ High Precision

- Diametrical tolerance decreased to 2/3 of the previous type. Also features reduced variation and does not require tool diameter correction when replacing tools.

■ Multi-Purpose

- Optimized flute design of slotted 3 flute (short) type reduces cutting force.
  (1) Allows drilling, slot milling and other continuous (compound) applications
  (2) Perfect for use with thin sheets and small machining centers.

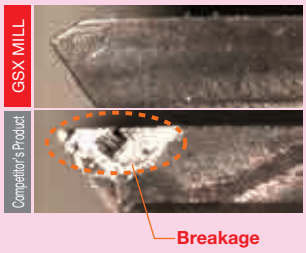
■ Long, High Rigidity Flutes (C Type)



GSX MILL-4D		Competitor's Product	
Tool Diameter	ø10 (2 Flutes)	Depth of Cut	a_p = 1.38"
Work Material	S50C		a_e = 0.004" x 25 times
Cutting Speed	144 SFM (1400 RPM)	Coolant	Wet
Feed Rate	9.45" (0.0034" IPT)	Vertical Machining Centre	BT30

■ Application Examples

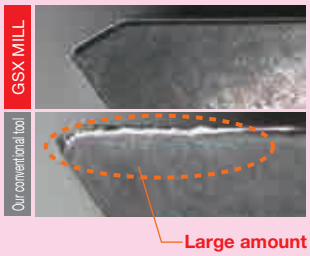
• Carbon Steel Groove Milling with GSX20000C



Gash land for stronger cutting edge.

Tool Diameter	ø6 (2 Flutes)
Part Material	1050 Steel
Cutting Speed	285 SFM (4,615 RPM)
Feed Rate	21.78" IPM (0.0024" IPT)
Depth of Cut	a_p = 0.118"
	a_e = 0.236"
Coolant	Dry
Vertical Machining Centre	BT50

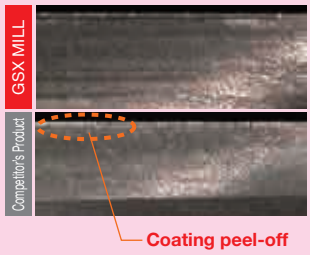
• Cast Iron Groove Milling with GSX20000C



GSX coat for improved wear resistance.

Tool Diameter	ø10 (2 Flutes)
Part Material	Cast Iron - FCD600
Cutting Speed	217 SFM (2,100 RPM)
Feed Rate	11.89" IPM (0.0028" IPT)
Depth of Cut	a_p = 0.197" x 5 times
	a_e = 0.394"
Coolant	Dry
Vertical Machining Centre	BT40

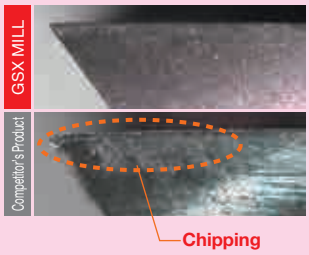
• Stainless Steel Machining with GSX20000C



Improved reliability even under wet machining.

Tool Diameter	ø10 (2 Flutes)
Part Material	304 Stainless
Cutting Speed	164 SFM (1,591 RPM)
Feed Rate	5.00" IPM (0.0016" IPT)
Depth of Cut	a_p = 0.394"
	a_e = 0.0197"
Coolant	Wet
Vertical Machining Centre	BT50

• 1050 Steel Side Milling with GSX20000S



The S type delivers optimum sharpness.

Tool Diameter	ø6 (2 Flutes)
Part Material	1050 Steel
Cutting Speed	285 SFM (4,615 RPM)
Feed Rate	21.8" IPM (0.0024" IPT)
Depth of Cut	a_p = 0.394"
	a_e = 0.012"
Coolant	Dry
Vertical Machining Centre	BT50

GSX MILL Series

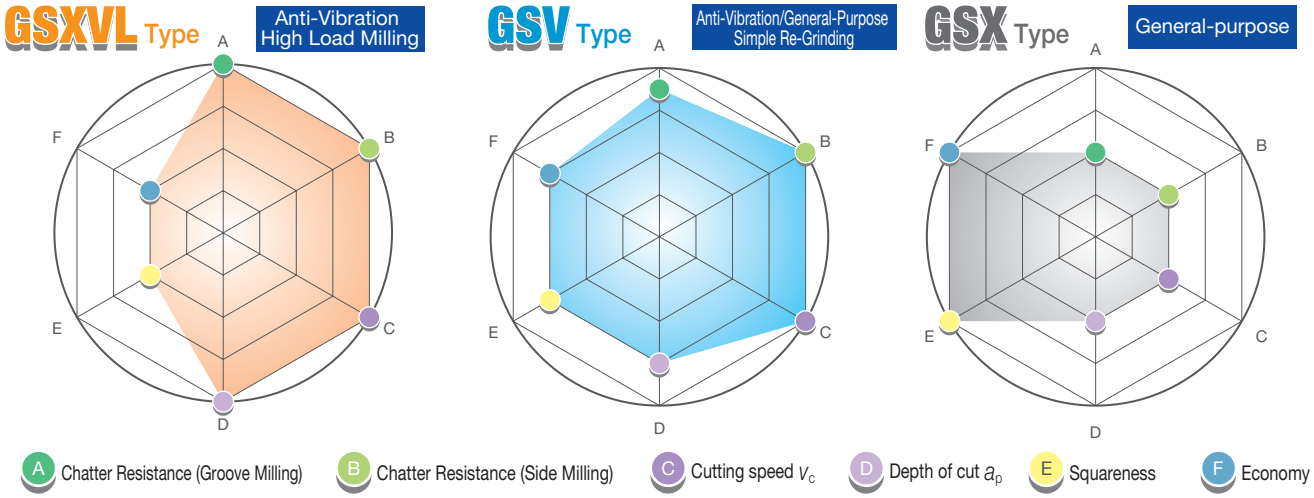
	Roughing	Finishing	Roughing	Finishing	Roughing	Finishing
GSXVL Type	◎	○	◎	◎	◎	○
GSV Type	◎	◎	○	◎	◎	○

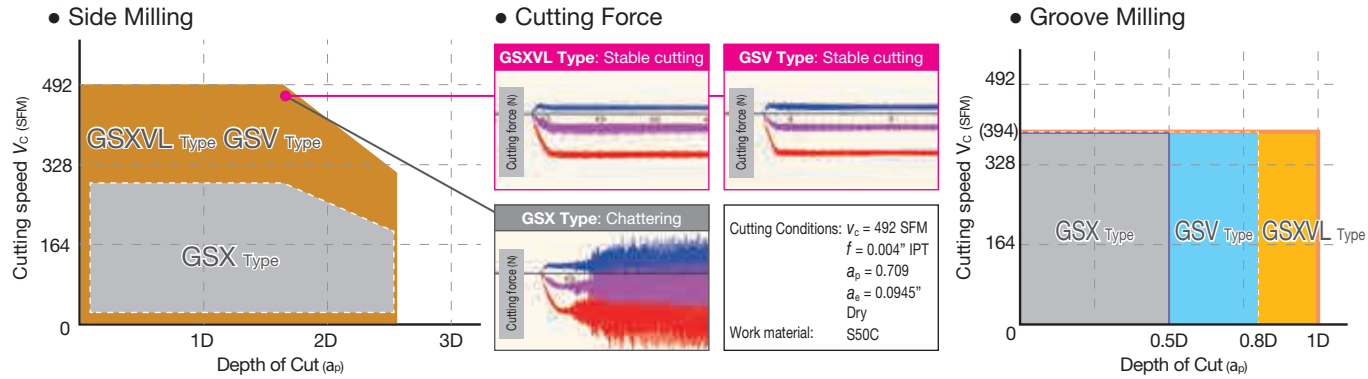
■ Diameter

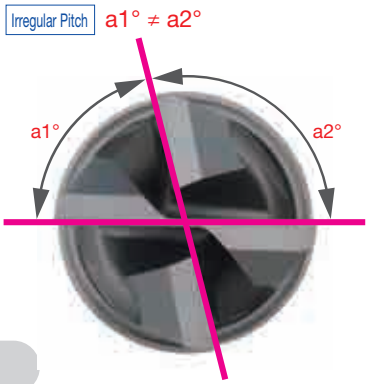
■ Differentiating GSXVL / GSV Type Use

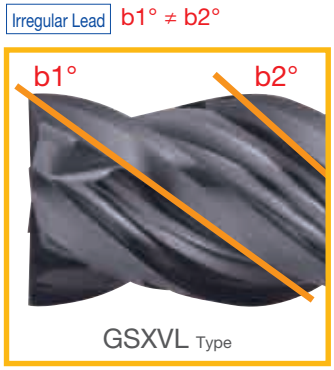
GSXVL types exhibit outstanding performance for high load milling. GSV types are both chatter-resistant and economical.



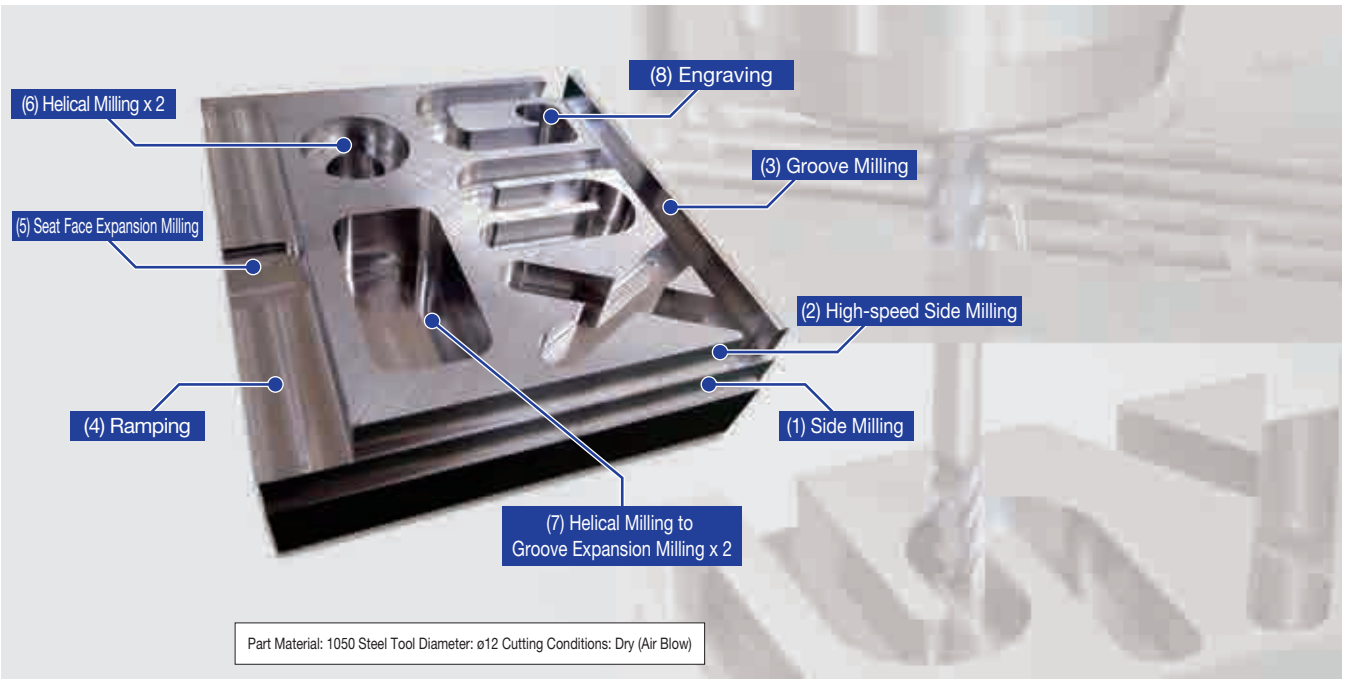
■ Cutting Range





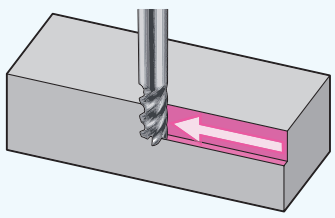


■ Application Examples



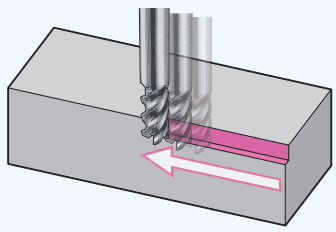
Part Material: 1050 Steel Tool Diameter: ø12 Cutting Conditions: Dry (Air Blow)

(1) Side Milling GSXVL Type ◯ / GSV Type ◎



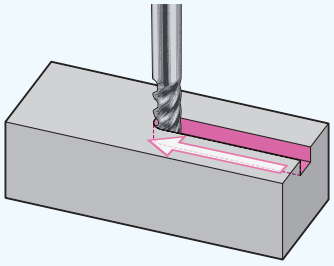
Cutting Conditions: v_c = 335 SFM (n = 4,100 RPM) Tool Diameter: ø8
v_f = 42.52" IPM (0.004" IPT)
a_p = 0.945", a_e = 0.787"

(2) High-speed Side Milling GSXVL Type ◎ / GSV Type ◎



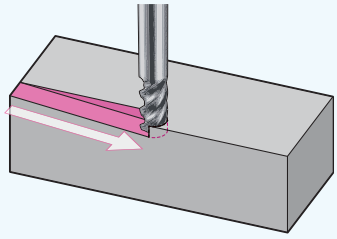
Cutting Conditions: v_c = 945 SFM (n = 4,000 RPM) Tool Diameter: ø12
v_f = 189" IPM (0.012' IPT)
a_p = 0.472" , a_e = 0.787"

(3) Groove Milling GSXVL Type ◎ / GSV Type ◯



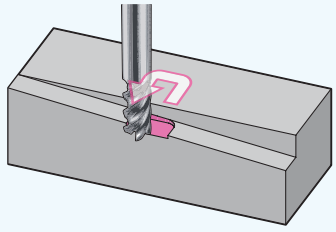
Cutting Conditions: v_c = 295 SFM (n = 2,400 RPM) Tool Diameter: ø12
v_f = 37.80" IPM (0.004" IPT)
a_p = 0.472"

(4) Ramping GSXVL Type ◎ / GSV Type ◯



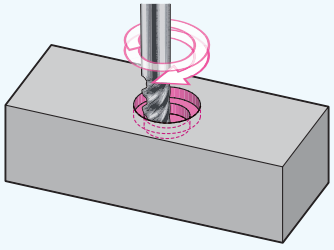
Cutting Conditions: v_c = 295 SFM (n = 2,400 RPM) Tool Diameter: ø12
v_f = 18.90" IPM (0.002" IPT)
Ramp Angle 5°

(5) Seat Face Expansion Milling GSXVL Type ◎ / GSV Type ◎



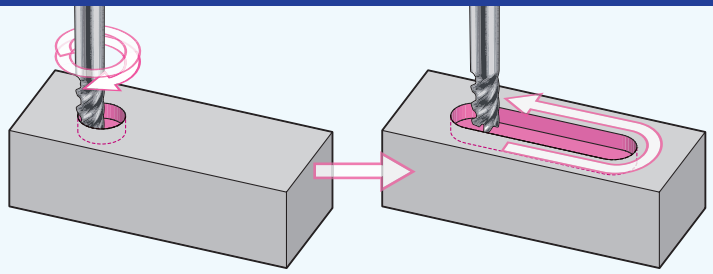
Cutting Conditions: v_c = 295 SFM (n = 2,400 RPM) Tool Diameter: ø12
v_f = 37.80" IPM (0.004" IPT)

(6) Helical Milling x 2 GSXVL Type ◎ / GSV Type ◎



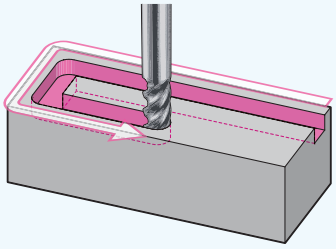
Cutting Conditions: v_c = 295 SFM (n = 2,400 RPM) Tool Diameter: ø12
v_f = 18.90" IPM (0.002" IPT)
Ramp Angle 3°

(7) Helical Milling to Groove Expansion Milling x 2 GSXVL Type ◎ / GSV Type ◎



Cutting Conditions: v_c = 295 SFM (n = 2,400 RPM) Tool Diameter: ø12
[Helical] v_f = 18.90" IPM (0.002" IPT) [Groove Expansion] v_f = 26.46" IPM (0.0028" IPT) [Finishing] v_f = 75.59" IPM (0.0079" IPT)
Ramp Angle 3°
a_p = 0.945", a_e = 0.004"

(8) Engraving GSXVL Type ◎ / GSV Type ◯



Cutting Conditions: v_c = 259 SFM (n = 2,100 RPM[1]) Tool Diameter: ø12
v_f = 23.19" IPM (0.0028" IPT)
a_p = 0.472"

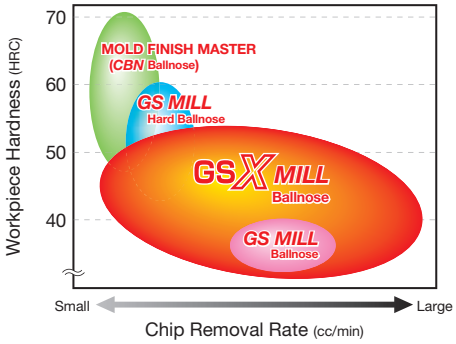
Application	Radius Milling		Profiling		Pocketing	
	Roughing	Finishing	Roughing	Finishing	Roughing	Finishing
Ballnose Type	◎	◎	◎	◎	◎	◎

■ Diameter

■ Improved Thermal Resistance and Wear Resistance

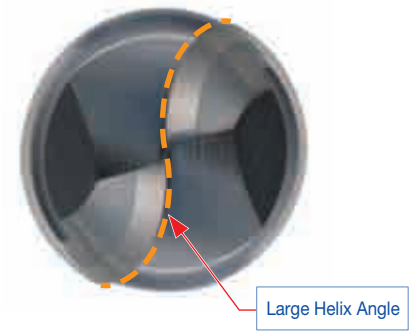
New coating combined with an ultra-fine grain carbide substrate for better thermal and wear resistance.

■ Application Range



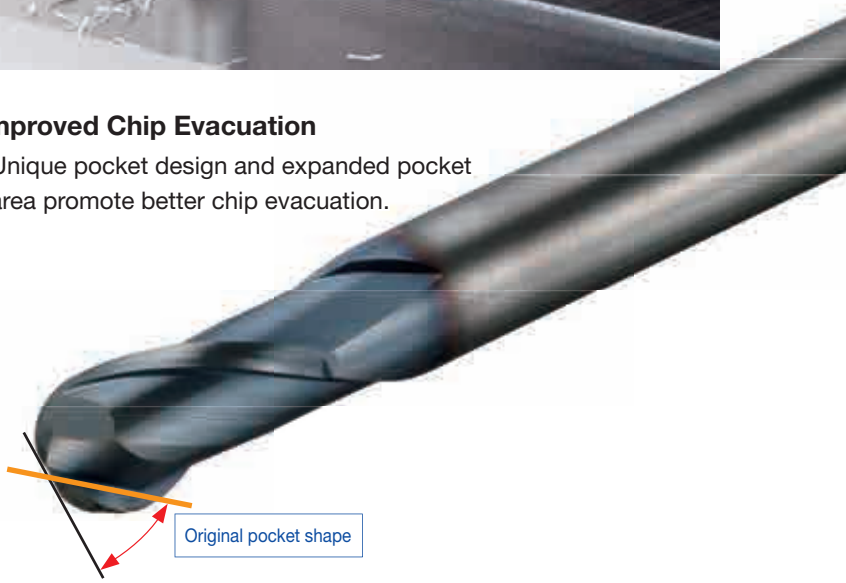
■ Reduced Cutting Force

Large helix angle on curved cutting edge reduces cutting force

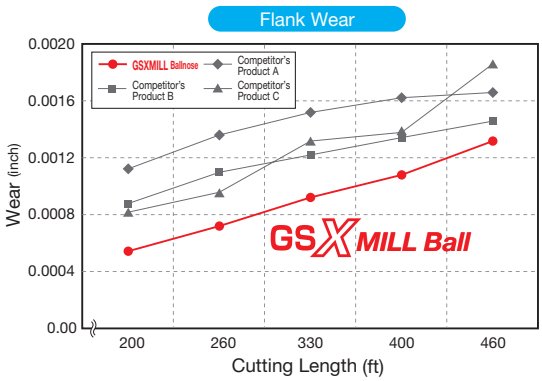


■ Improved Chip Evacuation

Unique pocket design and expanded pocket area promote better chip evacuation.



■ Application Examples



GSX Ballnose (Cutting Length 459 ft)

Conventional Tool (Cutting Length 262 ft)

Breakage in center, severe wear on rake face

Part Material: H13 Tool Steel (50HRC)
Tool Diameter: R3 (2 Flutes)
Cutting Conditions: v_c = 587 SFM (n = 9,500 RPM), v_f = 88.58" IPM (f_z=0.0047" IPT)
a_p = 0.0787"~0.0393", p_f = 0.0118" Wet
Equipment: Vertical Machining Center BT40

SUMIDIA Coated SSDC Type Series

☞ I89

■ Product Range

Cat. No.	Number of teeth	Shape	Diameter (mm)
SSDC 4000	4 Flutes	Right-hand Helix ☞ I89	ø6 to ø12
SSDC 4000RL	4 Flutes	Right/Left-hand Helix ☞ I89	ø6 to ø12

■ Features and Applications

- Two different types of flute shapes are available.

SSDC Type (Right-hand Helix Type)

Achieving both better sharpness and longer tool life through optimizing the rake and relief angles, along with a small helix angle.

SSDCRL Type (Right/Left-hand Helix Type)

Right/left-hand helix prevents delamination on top and bottom surfaces.
Cutting force is dispersed even with unstable clamping, improving surface quality.

■ Performance

- Surface Finish Comparison

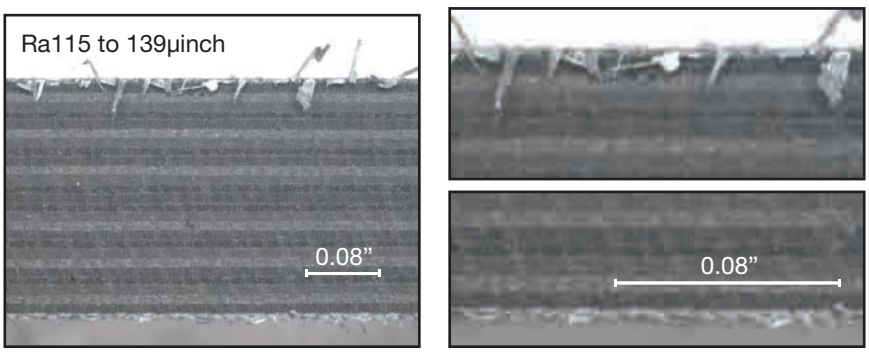
Competitor's Product



Work Material:	CFRP
Tool Diameter:	ø10 (4 Flutes)
Cutting Conditions:	v_c = 1,030 SFM
	(n = 10,000 RPM)
	v_f = 39.37”
	(f_z = 0.001” IPT))
	Dry

Results

SSDC Type

High surface quality with no burrs

Competitor's Product

Burrs are formed. Low surface quality

SSEH Type Series

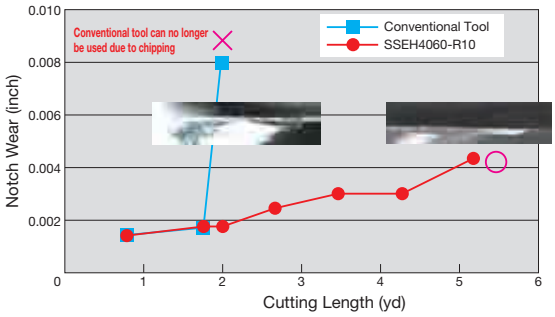
SSEH Type Radius

■ Features and Applications

- Steep helix (45° helix) improves sharpness
- Combination of unique flute design and semi-mirrored rake face improves chip evacuation and adhesion resistance.
- Ultra-smooth coating with improved hardness and thermal resistance combined with tough carbide substrate improves tool life when working with heat-resistant alloys.
- Unique, smooth radius shape mitigates cutting impact and improves fracture resistance.
- Both coated and uncoated types are in stock to meet various conditions.

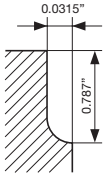
■ Application Examples

- Inconel 718 (Side Milling)



Tool Diameter: ø6 × R1
Cutting Conditions: v_c = 66 SFM, f_z = 0.001" IPT,
a_p = 0.197", a_e = 0.0197" Wet

- Inconel 713 (Side Milling)

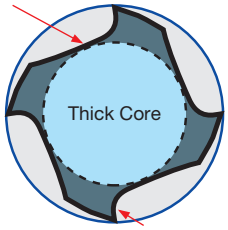


In Sumitomo Electric Hardmetal tests, the special coating with excellent adhesion resistance provided less cutting edge adhesion than the competitor's product and enabled fracture-free machining. The competitor's product suffered from edge adhesion leading to breakage.

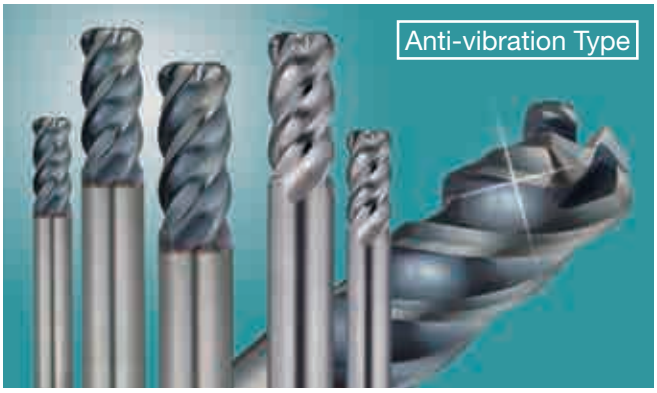
Tool Diameter: ø10 × R1 Number of Workpieces: 150pcs/unit
Cutting Conditions: v_c = 105 SFM, f_z = 0.0007" IPT,
a_p = 0.787", a_e = 0.0315" Dry

Unique, smooth radius design

Original wide arc flute



Semi-mirrored Rake Face

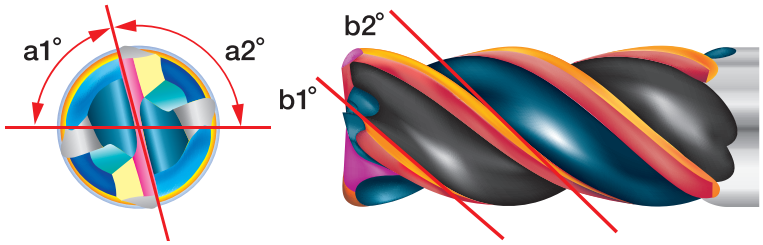


SSEH Radius Anti-vibration Type

■ Features and Applications

- New anti-vibration type added to the SSEH type endmill for exotic alloys.
- Builds on the same features of existing endmills by adding an irregular lead for exceptional anti-vibration performance.
- Compatible with a wide range of milling for exotic alloys including Stainless Steel, Inconel and titanium.
- Reduces chattering for high-speed, high-feed cutting.
- Both coated and uncoated types are in stock to meet various conditions.

Irregular Pitch + Irregular Lead



■ Application Examples

- Corner Finishing for Titanium Alloy

Machined Surface		
Vibration Data		Tool Breakage		

Cutting Conditions: v_c = 139 SFM (n = 1,125 RPM)
v_f = 7.87" IPM (f_z = 0.0017" IPT)
a_p = 0.197", a_e = 0.472" Wet

AURORA Coat Endmills

■ Features and Applications

- Very smooth AURORA Coat results in low adhesion as well as a good surface finish
- With lower cutting forces and high rigidity, this series is suitable for low rigidity machines
- Available in 2- and 4-flute square type as well as ballnose type endmills
- Added R0.05 to R2.00mm long neck ballnose endmills for machining copper electrodes

■ Product Range

Cat. No.	No. of Teeth	Shape	Diameter (mm)
ASM 2000DL	2 Flutes	Square  ☞ I82	ø2 to ø16
ASM 4000DL	4 Flutes	Square  ☞ I83	ø2 to ø16
SNB 2000DL	2 Flutes	Ballnose ☞ I115	R1 to R8 (ø2 to ø16)
SNB2	2 Flutes	Long Neck Ballnose  ☞ I116	R0.05 to R2 (ø0.1 to ø4)

Hard Brittle Material

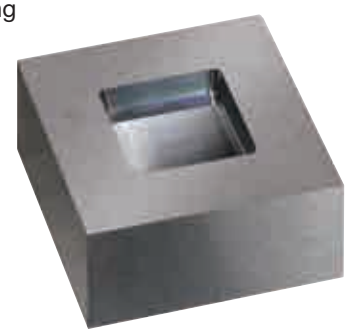
■ General Features

SUMIDIA Binderless is polycrystalline diamond that directly binds nano-order diamond particles with high strength without using any binders. Harder than single-crystal diamond, it has no cleavability, enabling machining of hard brittle material such as cemented carbide and making new machining methods possible.

■ Features

- SUMIDIA Binderless is a pure diamond material, but unlike single-crystal diamonds, it has no anisotropy. It therefore displays excellent wear resistance with less uneven wear.
- Thanks to its polycrystalline structure, SUMIDIA Binderless does not have the cleavability peculiar to single-crystal diamonds and displays excellent fracture resistance.

● Pocketing



Part Material:	Cemented Carbide AF1 (Ultra-Fine Grained Carbide)
Machining Details:	0.40" × 0.40" × depth 0.08"

Recommended Cutting Conditions

1. If cutting noise and vibration occur, please reduce the cutting conditions accordingly.
2. If the machine cannot achieve the recommended spindle speed, please use the maximum spindle speed available.

Endmill Identification (GSXMILL Series Only)

GSX 2 04 C - 2D

Series Code | Number of Flutes | Diameter in 64ths (4/64 = 0.0625") | Cutting Edge (C: Gash Land) | Cutting Edge Length

Recommended Cutting Conditions

1. For stable machining performance use rigid, high-precision machines and holders.
2. Use air blow when dry machining.
3. Use wet machining for stainless steel, heat-resistant alloy, and titanium alloy applications.
4. If chatter is a problem, reduce the spindle speed and feed rate indicated in the table below by the same ratio, or reduce the depth of cut.
5. If the machine cannot achieve the recommended spindle speed, please use the maximum spindle speed available.

GSX 2 04 C - 3D

Series Code | Number of Flutes | Diameter in 64ths (4/64 = 0.0625") | Cutting Edge (C: Gash Land) | Cutting Edge Length

Recommended Cutting Conditions

1. For stable machining performance use rigid, high-precision machines and holders.
2. Use air blow when dry machining.
3. Use wet machining for stainless steel, heat-resistant alloy, and titanium alloy applications.
4. In some cases, chattering may occur in early stages of milling but will cease after 2m of cutting.
5. If chatter is a problem, reduce the spindle speed and feed rate indicated in the table below by the same ratio, or reduce the depth of cut.
6. If the machine cannot achieve the recommended spindle speed, please use the maximum spindle speed available.

Endmill Identification (GSXMILL Series Only)

GSX 2 04 S - 2D

Series Code | Number of Flutes | Diameter in 64ths (4/64 = 0.0625") | Cutting Edge (S: Sharp Edge) | Cutting Edge Length

Recommended Cutting Conditions

1. For stable machining performance use rigid, high-precision machines and holders.
2. Use air blow when dry machining.
3. Use wet machining for stainless steel, heat-resistant alloy, and titanium alloy applications.
4. If chatter is a problem, reduce the spindle speed and feed rate indicated in the table below by the same ratio, or reduce the depth of cut.
5. This series is not recommended for groove milling.
6. If the machine cannot achieve the recommended spindle speed, please use the maximum spindle speed available.

Endmill Identification (GSXMILL Series Only)

GSX 4 04 C - 2D

Series Code | Number of Flutes | Diameter in 64ths (4/64 = 0.0625") | Cutting Edge (C: Gash Land) | Cutting Edge Length

Recommended Cutting Conditions

1. For stable machining performance use rigid, high-precision machines and holders.
2. Use air blow when dry machining.
3. Use wet machining for stainless steel, heat-resistant alloy, and titanium alloy applications.
4. If the machine cannot achieve the recommended spindle speed, please use the maximum spindle speed available.

Endmill Identification (GSXMILL Series Only)

GSX 4 04 C - 3D

Series Code | Number of Flutes | Diameter in 64ths (4/64 = 0.0625") | Cutting Edge | Cutting Edge Length

C: Gash Land

Recommended Cutting Conditions

1. For stable machining performance use rigid, high-precision machines and holders.
2. Use air blow when dry machining.
3. Use wet machining for stainless steel, heat-resistant alloy, and titanium alloy applications.
4. In some cases, chattering may occur in early stages of milling but will cease after 2m of cutting.
5. If chatter is a problem, reduce the spindle speed and feed rate indicated in the table below by the same ratio, or reduce the depth of cut.
6. If the machine cannot achieve the recommended spindle speed, please use the maximum spindle speed available.

Endmill Identification (GSXMILL Series Only)

GSX 4 04 S - 3D

Series Code | Number of Flutes | Diameter in 64ths (4/64 = 0.0625") | Cutting Edge (S: Sharp Edge) | Cutting Edge Length

Recommended Cutting Conditions

1. For stable machining performance use rigid, high-precision machines and holders.
2. Use air blow when dry machining.
3. Use wet machining for stainless steel, heat-resistant alloy, and titanium alloy applications.
4. If the machine cannot achieve the recommended spindle speed, please use the maximum spindle speed available.

Endmill Identification (GSXMILL Series Only)

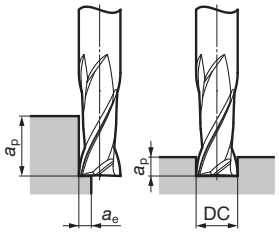
GSX 2 0150 S - 2D - S3

Series Code	Number of Teeth	Dia.	Cutting Edge S: Sharp Edge	Cutting Edge Length	Shank Dia.

GSX 20000S-2D Type



Recommended Cutting Conditions

1. For stable machining performance use rigid, high-precision machines and holders.
2. Use air blow when dry machining.
3. Use wet machining for stainless steel, heat-resistant alloy, and titanium alloy applications.
4. If chatter is a problem, reduce the spindle speed and feed rate indicated in the table below by the same ratio, or reduce the depth of cut.
5. This series is not recommended for groove milling.
6. If the machine cannot achieve the recommended spindle speed, please use the maximum spindle speed available.

Side Milling

Recommended Cutting Conditions

1. For stable machining performance use rigid, high-precision machines and holders.
2. Use air blow when dry machining.
3. Use wet machining for stainless steel, heat-resistant alloy, and titanium alloy applications.
4. If chatter is a problem, reduce the spindle speed and feed rate indicated in the table below by the same ratio, or reduce the depth of cut.
5. If the machine cannot achieve the recommended spindle speed, please use the maximum spindle speed available.

Recommended Cutting Conditions

1. For stable machining performance use rigid, high-precision machines and holders.
2. Use air blow when dry machining.
3. Use wet machining for stainless steel, heat-resistant alloy, and titanium alloy applications.
4. In some cases, chattering may occur in early stages of milling but will cease after 2m of cutting.
5. If chatter is a problem, reduce the spindle speed and feed rate indicated in the table below by the same ratio, or reduce the depth of cut.
6. If the machine cannot achieve the recommended spindle speed, please use the maximum spindle speed available.

Recommended Cutting Conditions

1. For stable machining performance use rigid, high-precision machines and holders.
2. Use air blow when dry machining.
3. Use wet machining for stainless steel, heat-resistant alloy, and titanium alloy applications.
4. If the machine cannot achieve the recommended spindle speed, please use the maximum spindle speed available.

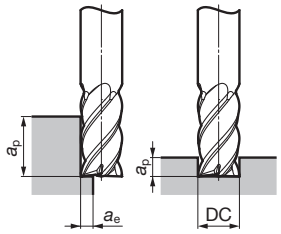
Series Code | Number of Teeth | Dia. | Cutting Edge S: Sharp Edge | Cutting Edge Length | Shank Dia.

GSX 40000S-2D Type



Recommended Cutting Conditions

1. For stable machining performance use rigid, high-precision machines and holders.
2. Use air blow when dry machining.
3. Use wet machining for stainless steel, heat-resistant alloy, and titanium alloy applications.
4. If chatter is a problem, reduce the spindle speed and feed rate indicated in the table below by the same ratio, or reduce the depth of cut.
5. This series is not recommended for groove milling.
6. If the machine cannot achieve the recommended spindle speed, please use the maximum spindle speed available.

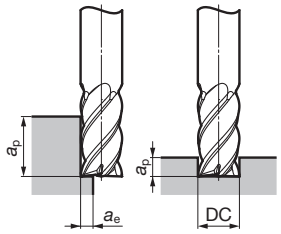
GSX 4 0100 S - 3D

Series Code	Number of Teeth	Dia.	Cutting Edge S: Sharp Edge	Cutting Edge Length

GSX 40000S-3D Type



Recommended Cutting Conditions

1. For stable machining performance use rigid, high-precision machines and holders.
2. Use air blow when dry machining.
3. Use wet machining for stainless steel, heat-resistant alloy, and titanium alloy applications.
4. In some cases, chattering may occur in early stages of milling but will cease after 2m of cutting.
5. If chatter is a problem, reduce the spindle speed and feed rate indicated in the table below by the same ratio, or reduce the depth of cut.
6. If the machine cannot achieve the recommended spindle speed, please use the maximum spindle speed available.

Recommended Cutting Conditions

1. For stable machining performance use rigid, high-precision machines and holders.
2. Use air blow when dry machining.
3. Use wet machining for stainless steel, heat-resistant alloy, and titanium alloy applications.
4. In some cases, chattering may occur in early stages of milling but will cease after 2m of cutting.
5. If chatter is a problem, reduce the spindle speed and feed rate indicated in the table below by the same ratio, or reduce the depth of cut.
6. If the machine cannot achieve the recommended spindle speed, please use the maximum spindle speed available.

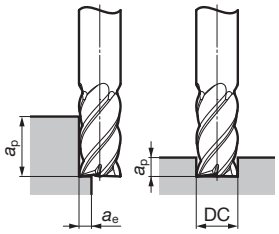
Series Code | Number of Teeth | Dia. | Cutting Edge Length

GSV 4000-2.5D Type



Recommended Cutting Conditions

1. For stable machining performance use rigid, high-precision machines and holders.
2. Use air blow when dry machining.
3. Use wet machining for stainless steel, heat-resistant alloy, and titanium alloy applications.
4. If the machine cannot achieve the recommended spindle speed, please use the maximum spindle speed available.

Recommended Cutting Conditions

1. Use dry cutting (air blow) conditions.
2. Down cut is recommended.
3. Make overhang as short as possible and use a rigid machine.

Recommended Cutting Conditions

1. The cutting conditions are guidelines.
   Cutting conditions are greatly influenced by clamping, work material grade, work material thickness and machine rigidity. Adjust the conditions accordingly.
2. Take sufficient dust control measures.
3. When radial depth of cut is 0.7D or more in groove milling and trimming, reduce feed rate accordingly.

Identification Code

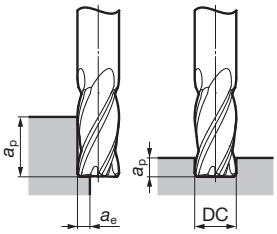
GSV 4 030 - R 02 - 2.5D

Series Code | Number of Teeth | Dia. | Cutting Edge R: Radius | Nose Radius | Cutting Edge Length

GSV 4000-R-2.5D Type



Recommended Cutting Conditions

1. For stable machining performance use rigid, high-precision machines and holders.
2. Use air blow when dry machining.
3. Use wet machining for stainless steel, heat-resistant alloy, and titanium alloy applications.
4. If the machine cannot achieve the recommended spindle speed, please use the maximum spindle speed available.

SSEHVL 4000W-R Type

Recommended Cutting Conditions

1. For stable machining, a high-rigidity machine is recommended.
2. Wet machining is recommended for stainless steel and heat-resistant alloy applications.
3. If cutting noise and vibration are present, please change the cutting conditions accordingly.

Type | For Standard Finishing | Number of Teeth | Dia. | Nose Radius | Neck Length

Recommended Cutting Conditions

1. Use a precision machine for stable cutting.
2. Non-water soluble cutting oil is recommended. Supply as a mist or external coolant. Take fire prevention precautions to avoid fire hazards caused by sparks igniting during machining or tool breakage.
3. Shorten overhang as much as possible.
4. Adjust cutting conditions as necessary as equipment performance and other conditions may vary.
5. Values shown in the table of conditions are guidelines. Adjust the actual cutting conditions to the desired machined surface quality.

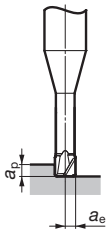
Identification Code

BNBR 2 D050 R010 - 015 4

Series Code | Number of Teeth | Dia. | Nose Radius | Neck Length | Shank Dia.

BNBR Type



Recommended Cutting Conditions

1. Use a machine with high rigidity for stable cutting.
2. Non-water soluble cutting oil is recommended. Supply as a mist or external coolant.
   Take fire prevention precautions to avoid fire hazards caused by sparks igniting during machining or tool breakage.
3. Shorten overhang as much as possible.
4. Adjust cutting conditions as necessary as machine rigidity and other conditions may vary.
5. Depths of cut shown in the table of conditions are maximum depths. Adjust the actual depth of cut to the desired machined surface roughness.

GSXB 20000 Type

Recommended Cutting Conditions

1. If cutting noise and vibration occur, please reduce the cutting conditions accordingly.
2. If the machine cannot achieve the recommended spindle speed, please use the maximum spindle speed available.

SNB2 Type

Recommended Cutting Conditions

1. For radius processing, reduce the feed to half the recommended feed.
2. Non-water soluble cutting oil is recommended.
3. Because of the high spindle speeds, runout of the endmill when mounted should be less than 10 µm.

Identification Code

NPDB (S) 1 030 - 010

Type	For Standard Finishing	Number of Teeth	Ballnose Radius	Neck Length

Recommended Cutting Conditions

1. Use a precision machine for stable cutting.
2. Non-water soluble cutting oil is recommended. Supply as a mist or external coolant. Take fire prevention precautions to avoid fire hazards caused by sparks igniting during machining or tool breakage.
3. Shorten overhang as much as possible.
4. Adjust cutting conditions as necessary as equipment performance and other conditions may vary.
5. Values shown in the table of conditions are guidelines. Adjust the actual cutting conditions to the desired machined surface quality.

Endmill Identification (GSXMILL Series Only)

GSXSLT 3 0100 C - 1.5D

Series Code | Number of Teeth | Dia. | Cutting Edge (C: Gash Land) | Cutting Edge Length

Recommended Cutting Conditions

1. For stable machining performance use rigid, high-precision machines and holders.
2. Use air blow when dry machining.
3. Use wet machining for stainless steel, heat-resistant alloy, and titanium alloy applications.
4. Use step machining of 0.1 DC when drilling stainless steel, heat-resistant alloy, and titanium alloy.
5. If the machine cannot achieve the recommended spindle speed, please use the maximum spindle speed available.

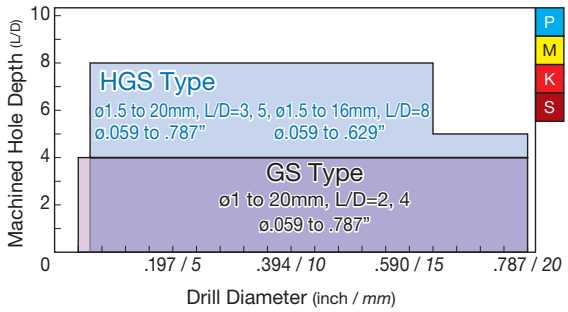
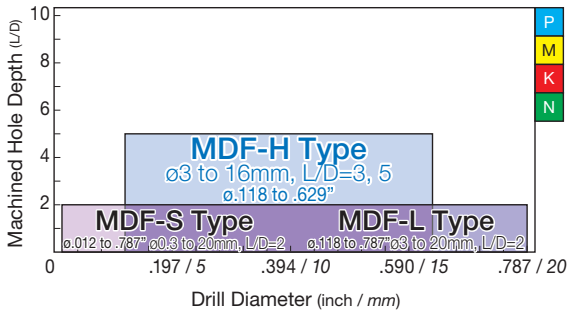
Application Range of Sumitomo Drills

Coolant: External supply / Internal supply

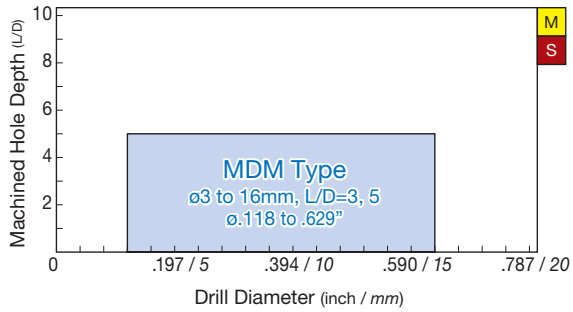
GS/HGS for General-Purpose High Efficiency Drilling



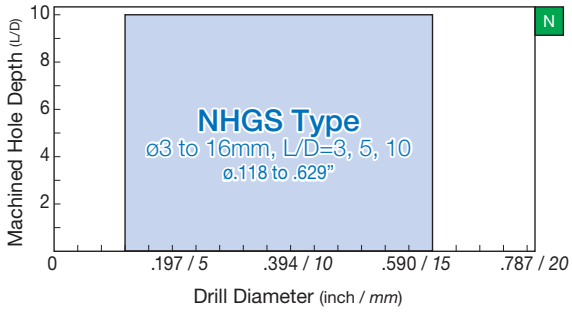
MDF Flat Bottom Drilling



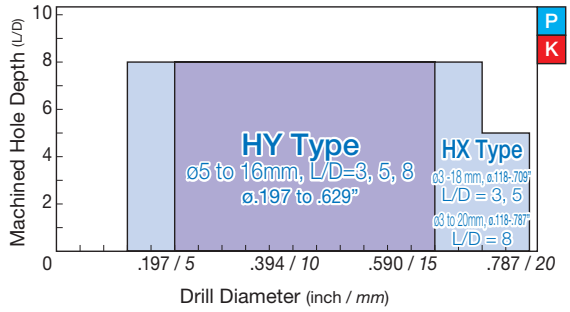
MDM for Stainless Steel & Exotic Alloy Cutting



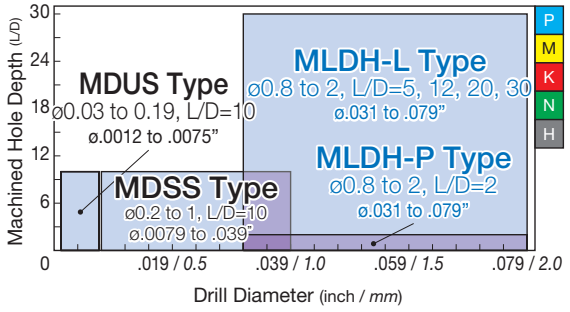
NHGS for High-efficiency Drilling of Aluminum Alloy



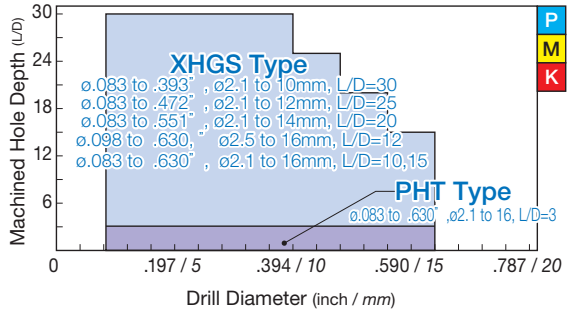
HX: for Cast Iron
HY: for High-efficiency Steel and Cast Iron



MDUS Type/MDSS Very Small Diameter Drills
MLDH-L Type/MLDH-P Small Diameter Long Drill

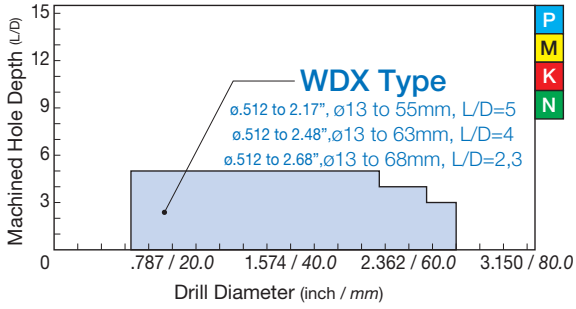


XHGS/PHT for High-efficiency Deep Hole Drilling



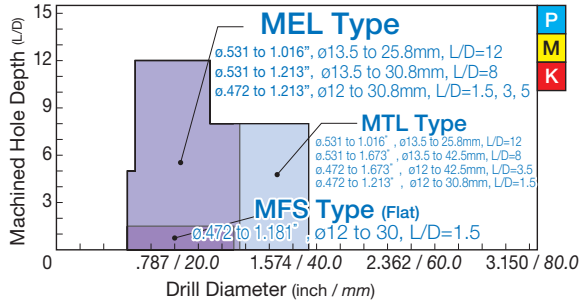
■ Indexable Insert Type Drill

WDX Indexable Drills



■ Indexable Tip Drills

SMD Replaceable Tip Drills
MTL Type Head / MEL Type Head / MFS Type Head



Drill Coating

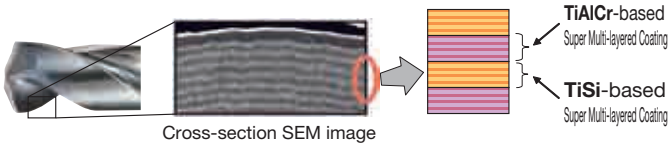
DEX Coating

■ General Features

Sumitomo's next-generation drill coating utilizes nano-coating technology to provide more than **double the tool life** of conventional coatings.

■ Features

- Coating Design
  World's first combined super multi-layered coating made from alternating layers of two super multi-layered substrates.



Cross-section SEM image

- Silicon and chrome improve wear, thermal and adhesion resistance.
- Super multi-layered structure offers improved chipping resistance.

■ DEX Coating Application Examples

GS Type MultiDrill with DEX Coating (after machining 100 holes)	
Competitor's product A (after machining 70 holes)	

Tool: MDW0800GS4
Part Material: Carbon Steel (200HB)
Cutting Conditions: v_c=230 SFM, f=0.0098 IPR, H=1.260", external coolant supply (water soluble)

DLC Coating (AURORA)

DL1300 DL1500

■ General Features

DLC Coating - AURORA is a high-hardness, low-friction coefficient layer of DLC (Diamond-like Carbon) which dramatically improves adhesion resistance in drilling of aluminum alloy and non-ferrous metals, and works in combination with various drill designs to achieve stable long tool life.

■ Features

- Thin, ultra-smooth DLC coating with a low coefficient of friction
  Helps prevent adhesion to the cutting edge and requires significantly less cutting force during drilling of aluminum alloy and non-ferrous metals.
- High adhesion strength withstands stringent cutting conditions
  The world's first coating for cutting non-ferrous materials, with a special coating technique that significantly improves adhesion strength.
- A spectrum of colors
  Glossy colors are achieved by the special coating technique.

■ DLC Coating - AURORA Application Examples

AURORA Coating Super MultiDrill NHGS Type (after drilling 100 holes)	Clean cutting edge with no adhesion
Competitor's Product B (after drilling 20 holes)	Severe adhesion

Tool: MDW0800NHGS5
Part Material: Aluminum Alloy
Cutting Conditions: v_c= 650 SFM, f= .0394 IPR, H=1.260", internal coolant supply

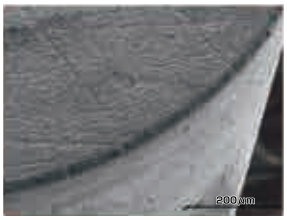
Diamond Coating - SUMIDIA®

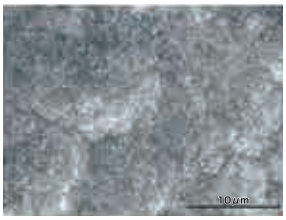
■ General Features

Our original polycrystalline diamond coating technology achieves over 10 times the wear resistance of uncoated carbide.
Excellent diamond film adhesion is achieved with a combination of a dedicated diamond coating alloy and a proprietary coating pre-treatment technique.

■ Features

- Micro-grain diamond coating that provides the combination of high strength and high wear resistance on smooth surfaces that is required for CFRP drilling





■ Diamond Coating - SUMIDIA® Application Examples

SUMIDIA Coat	Competitor's Diamond Coating
No. of Workpieces: 600 holes Able to continue	No. of Workpieces: 50 holes Coating peels and burrs are formed

Tool: Diamond Coating SUMIDIA® Drill ø6.35mm
Part Material: CFRP
Cutting Conditions: v_c=430 SFM, f=0.003 IPR, H=.590", through hole, dry

GS / HGS

■ Features & Benefits

- Long tool life
  New cutting edge design and special DEX Coating provide long tool life for a wide variety of materials.
- Steady chip evacuation
  J Flute® shape significantly improves chip control and evacuation.
- Stable drilling performance
  Unique thinning design promotes stabilized drilling.
- Environmentally friendly
  Also compatible with the MQL (Minimum Quantity Lubrication) system. MQL systems are designed to apply a very fine amount of high quality lubricating oil to metal cutting/machining operations.

■ Product Range

MDW	Cat. No.	Diameter Range (inch / *mm*)	Hole Depth (L/D)
GS: Global Standard	**MDW□□□□GS2**	ø.0394" to ø.7874" *1.00mm to 20.00mm*	up to 2
	MDW□□□□GS4		up to 4
HGS: Global Standard with Coolant through Holes	**MDW□□□□HGS3**	ø.0591" to ø.7874" *1.50mm to 20.00mm*	up to 3
	MDW□□□□HGS5		up to 5
	MDW□□□□HGS8	ø.0591" to ø.6299" *1.50mm to 16.00mm*	up to 8

■ Diverse shank options for standard collet holders, and high end Shrink-fit/Hydraulic holders

HGS Metric Size Example

Product Code	Series	Diameter Four digits (5mm)	Style	Depth	DIN shank option Add "S"	Shank Size
MDW0500HGS3	MDW	0 5 0 0	HGS	3	—	*5mm* (.1968")
MDW0500HGS3S	MDW	0 5 0 0	HGS	3	S	*6mm (.2362")*

*Metric Sizes have four digit diameter callouts.

Two metric shank diameters available depending on your application, and tool holding. "S" = DIN shank

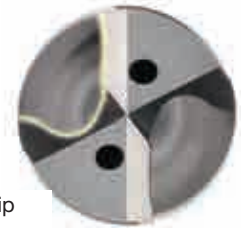
HGS Inch Size Example

Product Code	Series	Diameter five digits (0.5000")	Style	Depth	DIN shank option Add "S"	Shank Size
MDW05000HGS3	MDW	0 5 0 0 0	HGS	3	—	*33/64ths (.5156")*
MDW05000HGS3S	MDW	0 5 0 0 0	HGS	3	S	*14mm (.5516")*

*Inch Sizes have five digit diameter callouts.

Fractional shank, and DIN shank available depending on your application, and tool holding. "S" = DIN shank

J flute®
**"J Flute®" is a registered trademark.



Wide chip pocket for smooth chip evacuation.

HGS

GS

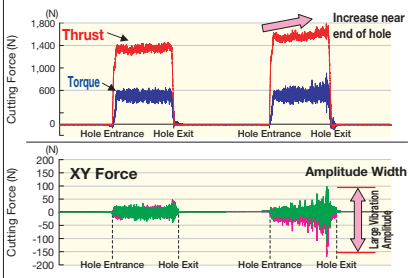
■ Performance

Chip Control

GS | Conventional Tool

Comparison of Cutting Force

GS | Conventional Tool



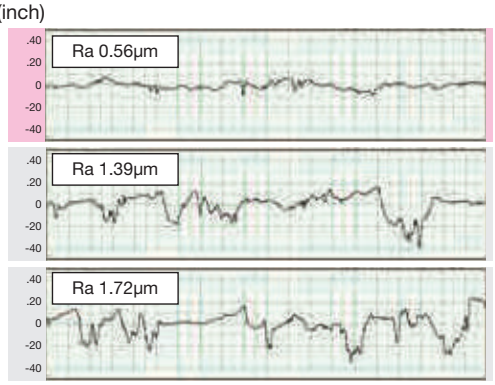
GS provides stable drill performance throughout the drilling process

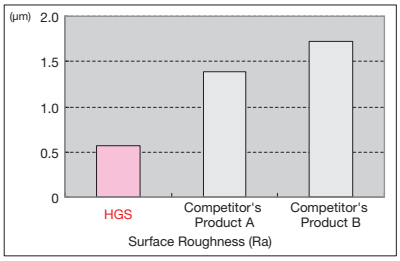
Tool: MDW0800GS4
Part Material: 1049 Steel (200HB)
Cutting Conditions: v_C=262 SFM, f= .0098 IPR, H=.9449",
external coolant supply (water soluble)

■ Double margin (HGS) (excluding ø.0591" to ø.0945" sizes)

The HGS uses a double margin for greater stability and hole precision in deep drilling

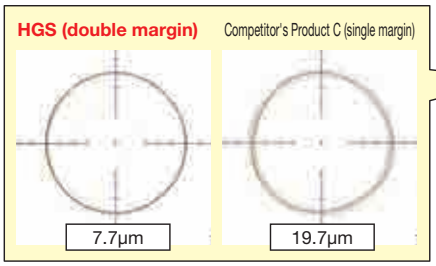
● **Surface Roughness Comparison**

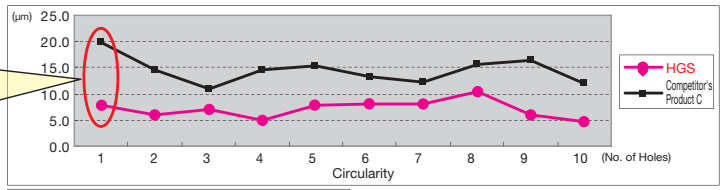




Part Material: Alloy Structural Steel (120HB)
Tool: MDW0800HGS5
Cutting Conditions: v_c=262sfm, f=.0098inch/rev, H=1.4961inch
Internal coolant supply: Water soluble

● **Circularity Comparison**



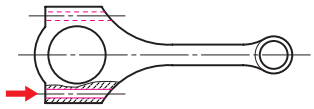


Part Material: 1049 Steel (200HB)
Tool: MDW0800HGS8
Cutting Conditions: v_c=262sfm, f=.0098inch/rev
H=2.51971inch, internal coolant supply (water soluble)

4-point guide design thanks to double margin reduces runout for improved stability.
Good surface roughness and circularity.

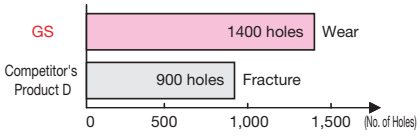
■ Application Examples for GS Drills

● Medium Carbon Steel (250HB) for Automotive

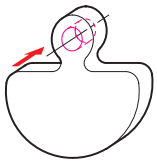


·Tool: MDW0970GS4
·Cutting Conditions: v_c=262sfm, f=.0098inch/rev
H=.9843inch, external coolant supply (water soluble)

Achieved 1.5 times the tool life!
Reduced wear on peripheral cutting edge

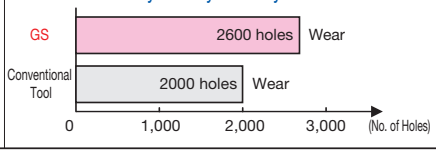


● Prehardened Mold Steel Machine Components

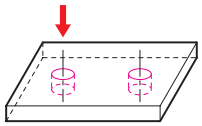


·Tool: MDW0980GS2
·Cutting Conditions: v_c=230sfm, f=.0059inch/rev
H=.2756inch, external coolant supply (water soluble)

1.3 times longer tool life than conventional tools.
Good circularity and cylindricity.

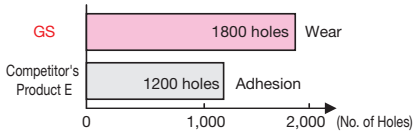


● Structural Steel Machine Components



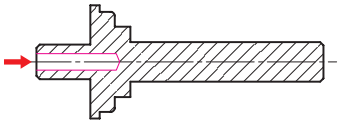
·Tool: MDW 050GS4
·Cutting Conditions: v_c=492sfm, f=.0118inch/rev
H=.4724inch, external coolant supply (water soluble)

Achieved 1.5 times the tool life!
Good chip control



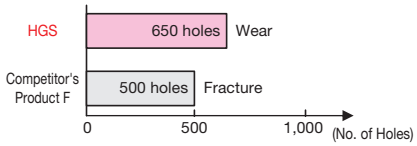
■ Application Examples for HGS Drills

● Structural Alloy Steel for Automotive

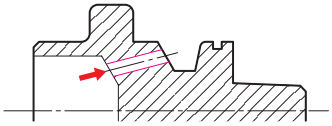


·Tool: MDW 0600HGS8
·Cutting Conditions: v_c=262sfm, f=.0098inch/rev
H=1.8898inch, internal coolant supply (oil-based)

Achieved 1.3 times the tool life!

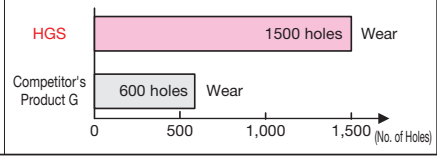


● Alloy Bearing Steel Automotive Components

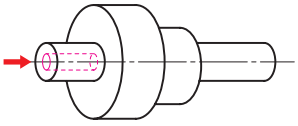


·Tool: MDW0570HGS5
·Cutting Conditions: v_c=262sfm, f=.0039inch/rev
H=1.378inch, internal coolant supply (water soluble)

Achieved 2.5 times the tool life!

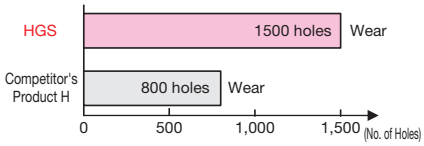


● Low Carbon Steel Machine Components



·Tool: MDW0860HGS3
·Cutting Conditions: v_c=171sfm, f=.0079inch/rev
H=.9843inch, internal coolant supply (water soluble)

Achieved 1.8 times the tool life!



Carbon Steel/ Alloy Steel up to 0.28% | Carbon Steel/ Alloy Steel from 0.29% | Tempered Steel | Hardened Steel up to 45HRC | Hardened Steel from 46HRC | Stainless Steel | Ti Alloy | Heat-resistant Steel | Cast Iron | Ductile Cast Iron | Aluminum Alloy | Copper Alloy

GS (External Coolant Supply)

DEX Coating 2D 4D

Fig 1

Grade: ACX70

Cut tap reccomendations based on 60-75% full thread. Form tap reccomendations based on 55-70% full thread.

Tap Size values should be adjusted according to application.

Diameter *ø10.26 to 12.40mm* (0.4040" to 0.4882") Dimensions (*mm*/inch)

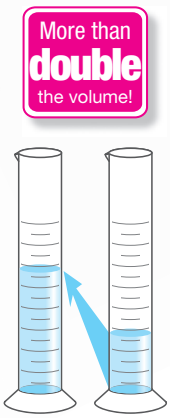
Bean Jet Cooling®

RX-Thinning & Wide Chip Pocket For Stable & Light Cutting Force

- New Bean Jet Cooling® provides longer tool life in Stainless and Exotic Alloys.
- Optimized for chip evacuation and heat removal.
- Resistant to edge chipping.

*Ideal for drill diameters of ø4.1mm and above

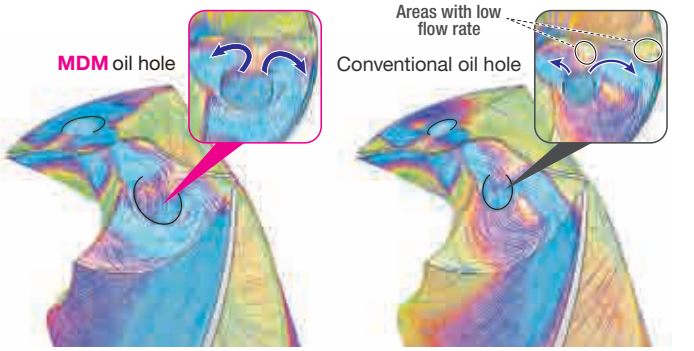
- High volume & High Pressure cooling to the cutting edge



MDM

Conventional

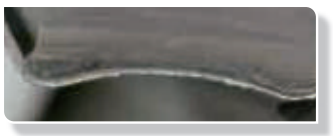
- New technology developed from fluid analysis effectively cools the cutting edge!



Analysis at spindle speed 3,200min^{-1}

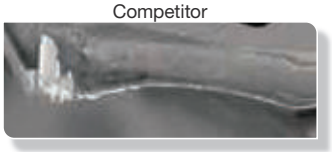
- Resistant to edge chipping
  - Removing excess heat from rake face dramatically reduces adhesion & breakage.

MDM



Less adhesion means longer tool life

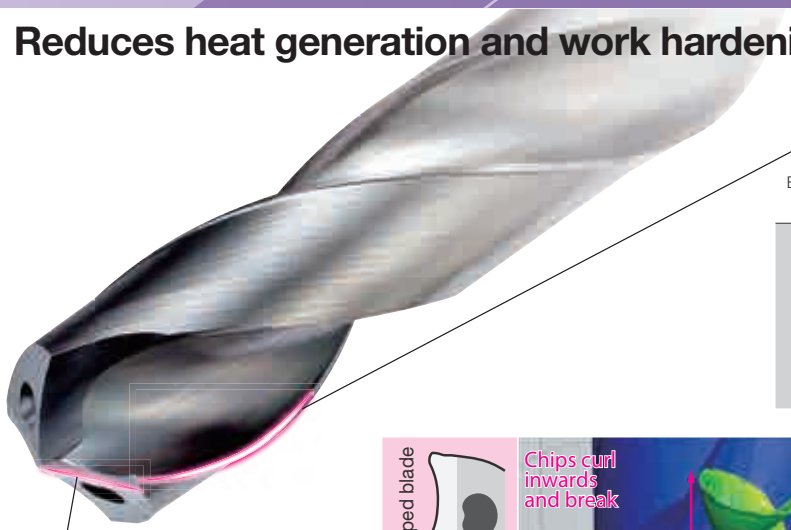
Competitor



Breakage caused by adhesion at outer edge

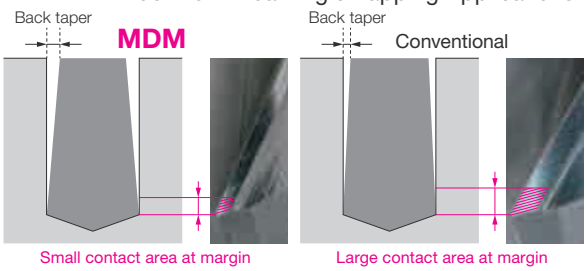
Part Material: 304 Stainless Steel, Machine: BT30 vertical M/C
Tool: MDM0800S08H05 (*ø8 mm* × 5D)
Cutting Conditions: v_C= 265 SFM, f= .0098 IPR
H= 1.57” (through hole)
Internal Coolant Supply (Water Soluble)
Cutting Distance: 1.57”

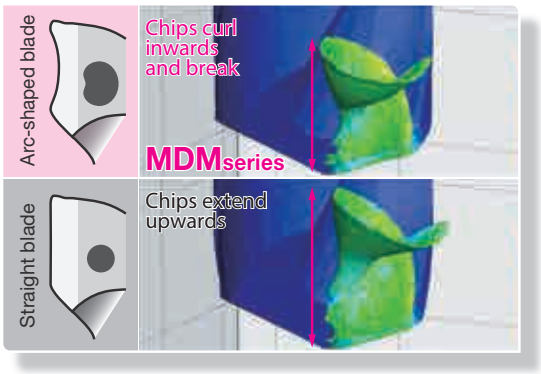
Reduces heat generation and work hardening!



● Narrow margin and large back taper

The reduced contact area on the margin reduces work hardening and leads to longer tool life in Reaming & Tapping Applications





High Quality Edge Ensures Long Tool Life: The sharp blade design allows low cutting forces with excellent chip control.

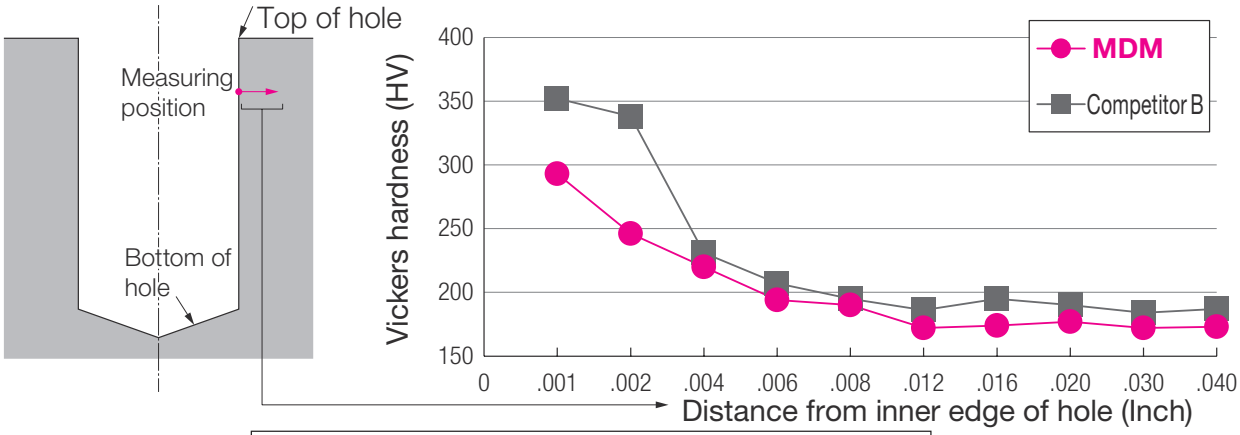
MDM

Competitor A

Part Material: 304 Stainless Steel
Machine: BT30 vertical M/C
Tool: MDM0400S04H05 (*ø4.0 mm* × 5D)
Cutting Conditions: v_C= 265 SFM, f= .0039 IPR
Internal Coolant Supply (Water Soluble)

● Suppresses work hardening on the inner edge of the hole

Reducing the cutting load not only reduces damage to the drill, but also contributes a longer life of reamers and taps used in post processing



Part Material: 304 Stainless Steel, Machine: BT30 vertical M/C
Tool: MDM0800S08H05 (*ø8.0 mm* × 5D)
Cutting Conditions: v_C= 265 SFM, f= .0079 IPR H= 1.57" (through hole)
Internal Coolant Supply (Water Soluble)

Experience exceptional stability when machining stainless steel and exotic alloys!

ACT70 NX COATING

Carbide Substrate & Coating ideal for machining stainless steel and exotic alloy.

TiAlCrSi Super Multi-Layer
Hardness HV: 46GPa
Oxidation starting temperature: 1,100°C

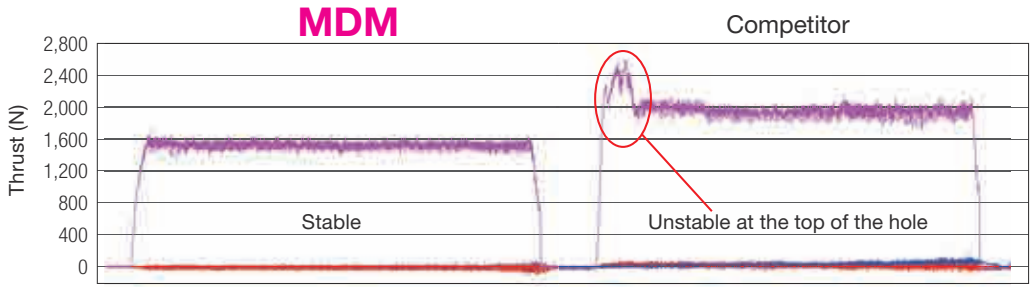
Highly Adhesive Coating Layer

- **NX coating reduces wear at the margin and resists edge chipping.**

MDM Conventional

Part Material: 304 Stainless Steel,
Machine: BT30 vertical M/C
Tool: MDM0800S08H05 (*ø8.0 mm* × 5D)
Cutting Conditions: v_C = 265 SFM,
f = .0079 IPR, H = 1.57" (through hole)
Internal Coolant supply (Water Soluble)

- **Reduced thrust enables stable machining from the top of the hole to the bottom**

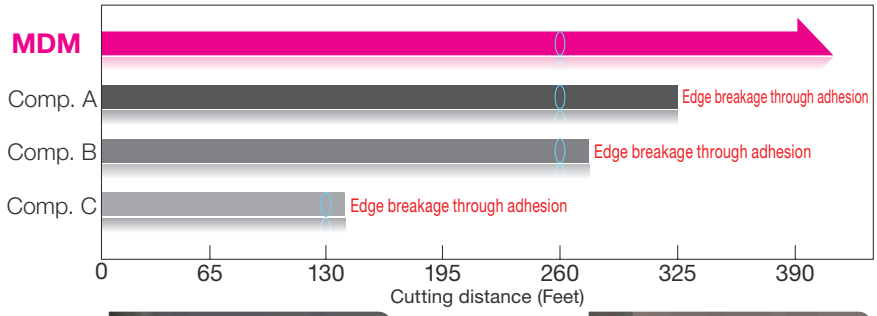


Part Material: 304 Stainless Steel,
Machine: BT30 vertical M/C
Tool: MDM0800S08H05 (*ø8.0 mm* × 5D)
Cutting Conditions: v_C = 265 SFM,
f = .0079 IPR, H = 1.57" (through hole)
Internal Coolant Supply (Water Soluble)

• Application Examples:

Excellent Wear Resistance in Austenitic Stainless Machining Center

Part Material: 304 Stainless Steel,
Machine: BT30 vertical M/C
Tool: MDM0800S08H05 (*ø8.0 mm* × 5D)
Cutting Conditions: v_C = 265 SFM,
f = .0079 IPR, H = 1.57" (through hole)
Internal Coolant Supply (Water Soluble)



MDM
After machining
260 ft.

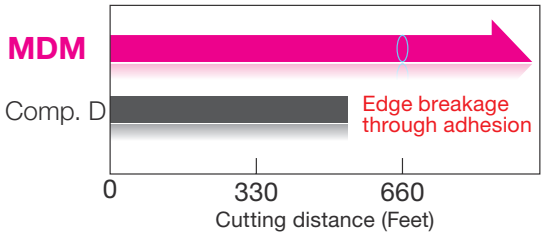
Comp. A
After machining
260 ft.

Comp. B
After machining
260 ft.

Comp. C
After machining
130 ft.

Excellent Wear Resistance in Austenitic Stainless: Small Lathe

Part Material: 304 Stainless Steel,
Machine: CNC Automatic Lathe (Workpiece rotation)
Tool: MDM0540S06H03 (*ø5.4 mm* × 3D)
Cutting Conditions: v_C = 155 SFM,
f = .0047 IPR, H = 1.00" (blind hole)
Internal Coolant Supply (Non-Water Soluble)

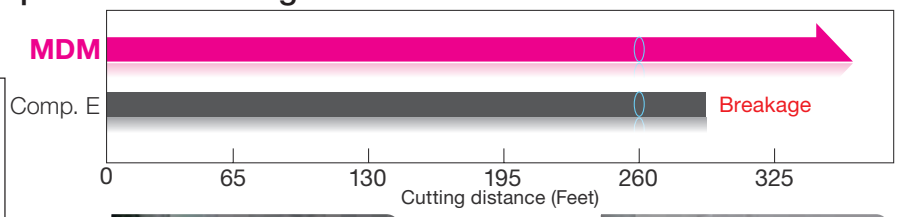


MDM

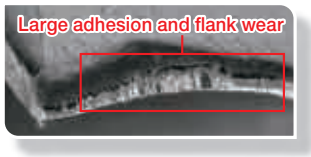
After machining 660 ft.

Excellent Wear Stability in Precipitation Hardening Stainless Steel

Part Material: 17-4PH (S17400) Stainless Steel,
Machine: BT30 vertical M/C
Tool: MDM0400S04H05 (*ø4 mm* × 5D)
Cutting Conditions: v_C = 165 SFM,
f = .0039 IPR, H = .55" (blind hole)
Internal Coolant Supply (Water Soluble)



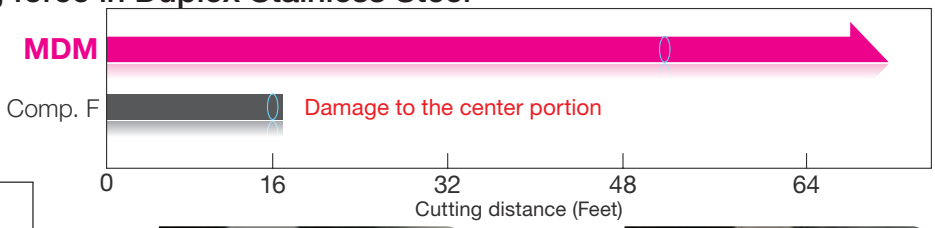
MDM
After
machining
260 ft.

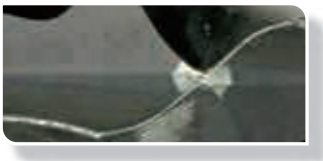


Comp. E
After
machining
260 ft.

RX thinning reduces cutting force in Duplex Stainless Steel

Part Material: 25% chromium duplex
ferritic-austenitic stainless steel
Machine: BT30 vertical M/C
Tool: MDM 0800S05H05 (*ø8 mm* × 5D)
Cutting Conditions: v_C = 200 SFM,
f = .0079 IPR, H = 1.18" (through hole)
Internal Coolant Supply (Water Soluble)

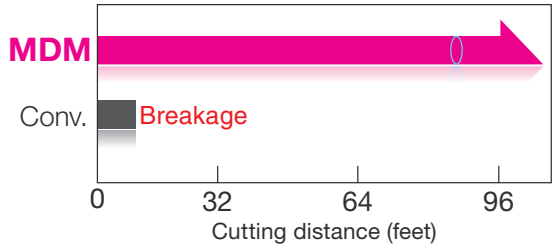




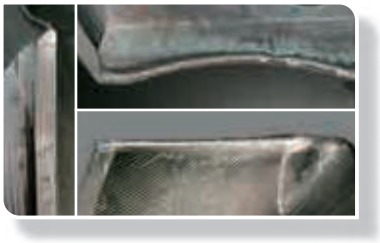
MDM
After
machining
52 feet

Comp. F
After
machining
16 feet

Effective chip formation & high tool life in Titanium Alloy



MDM



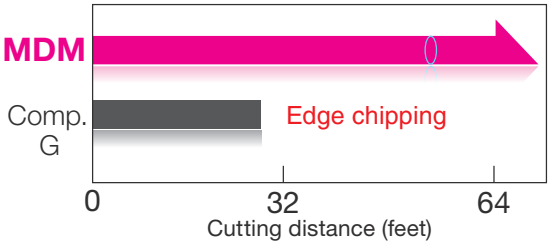
After machining 88 feet

MDM

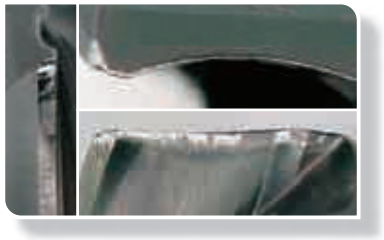
Conventional

Part Material: Ti-6Al-4V Titanium Alloy
Machine: BT30 vertical M/C
Tool: MDM0500S05H05 (*ø5 mm* × 5D)
Cutting Conditions: v_c = 130 SFM
f = .0047 IPR H = .74" (blind hole)
Internal Coolant supply (Water Soluble)

Resistant to edge chipping in Heat-Resistant Cast Steel



MDM



After machining 56 feet

Part Material: SCH13X - Heat-Resistant Steel
Machine: BT30 vertical M/C
Tool: MDM0880S09H03 (*ø8.8 mm* × 3D)
Cutting Conditions: v_c = 165 SFM
f = .0043 IPR H = .71" (blind hole)
Internal Coolant supply (Water Soluble)

• Sumitomo Solid Carbide Drills Comparison

MDM Recommended Cutting Conditions - Inch

1. The recommended cutting conditions below are for cases where an internal supply of a water soluble coolant is used.
2. If using non-water soluble coolant, reduce the cutting speed by 20-30% and ensure that sufficient coolant is supplied.
3. When mounting the drill in the collet, make sure that runout around the cutting edge is no greater than 0.02mm. Make sure the flute does not enter the collet.
4. If the workpiece the tool is entering is abnormally shaped (tilted, interrupted etc.), reduce the feed rate to about half when inserting the drill in the workpiece.
   *If stable machining is still not possible, pre-machining of the flat surface with the MDF Flat MultiDrill is recommended.
5. When performing intermittent through drilling, reduce the feed rate to about half the feed rate used prior to this process.

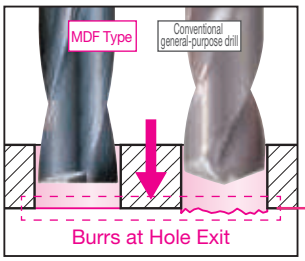
■ General Features

The flat MDF multidrill is a solid carbide drill that can be used for a variety of applications, including high-efficiency spot facing and drilling in inclined and curved surfaces.

■ Features and Applications

- NEW Inch sizes added for MDF□□□□H3D (see pages J54-J57)
- Suited to various types of drilling thanks to a point angle of 180°
  Can be used for high-efficiency spot facing, drilling in non-horizontal surfaces such as inclined and cylindrical surfaces, and interrupted drilling. Also reduces burrs at the hole exit.
- Improves machining stability
  Achieves high rigidity by employing RS THINNING, which provides a thick web at the bottom.
- Excellent chip evacuation
  Achieves excellent chip evacuation due to the wide chip pocket and high-quality rake face shape.
- Excellent cutting edge strength
  Achieves excellent cutting edge strength through optimized cutting edge design.
- Long types available
  Overhang lengths up to L/D=10 are now available.
- Types with oil hole available
  Coolant can now be supplied internally. This enables deeper drilling.

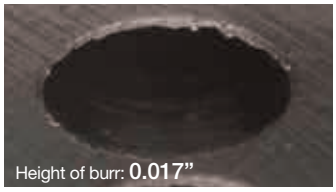
■ Reduction of Burrs at Hole Exit



Part Material: Alloy Steel
Tool: MDF 0500S2D (ø5.0mm 2D)
Cutting Conditions: V_c=213 SFM, f=0.0047", H=0.393", 150 holes, Wet
Machine: Vertical machining center (BT40)

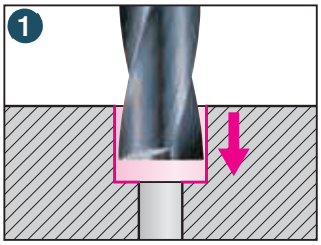
Reduces exit burrs by **half** compared with general-purpose drills

Flat MultiDrill MDF Type

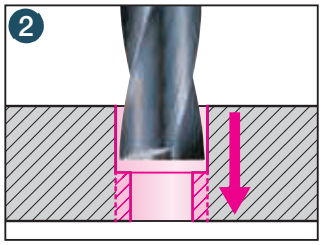


Conventional general-purpose drill

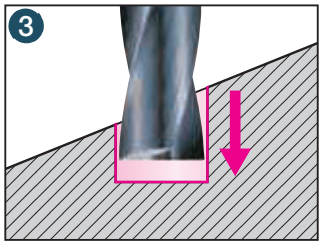
■ Machining Applications



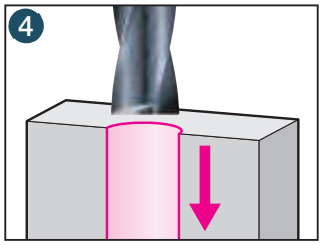
High-efficiency spot facing



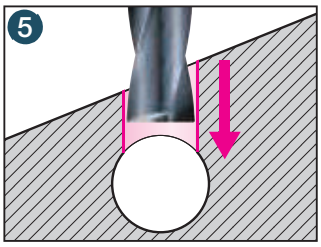
Hole expansion drilling



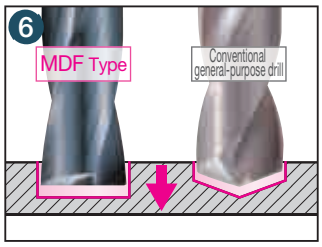
Drilling in non-horizontal surface (inclined surface, cylindrical surface, etc.)



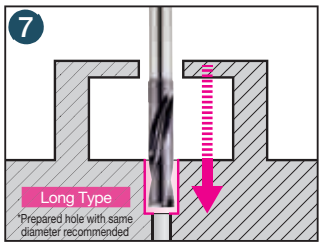
Interrupted drilling



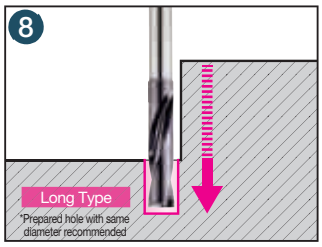
Cross drilling



Pre-tap hole drilling in thin sheets



Spot facing in deep positions



Avoids interference with work material

Long shanked (L2D) styles are available for flat base drilling, hole expansion and burr control in long overhang conditions.

- For drilling with long overhang and to avoid interference with the workpiece

*A prepared hole with the same diameter or centering hole with a larger diameter than the tool is needed for drilling with the long type.

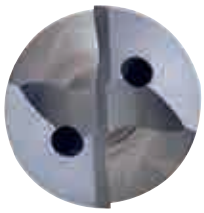
DC < *6mm*, stepped shank

DC ≥ *6mm*, relief shank

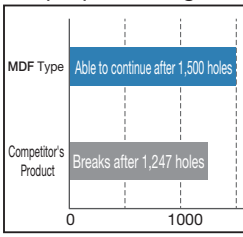
H-type with oil hole (3D/5D) for 2-5D deep hole applications

- Inch sizes now available
- Internal coolant supply enables deep flat hole drilling.

*A prepared hole with the same diameter or centering hole with a larger diameter than the tool is needed for drilling with an L/D=5 oil hole.

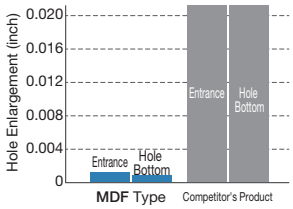


Deep Spot Facing



Tool: MDF 0600H5D
Part Material: Carbon Steel ø6mm
Cutting Conditions:
v_C=459 SFM, f=0.006 IPR
H = 1.181" (5D), Internal Coolant Supply
1.772" overhang, prepared hole depth 0.118" (ø6mm)

Long Overhang Spot Facing



Tool: MDF 0600H3D
Part Material: Carbon Steel
Cutting Conditions:
v_C=295 SFM, f=0.004 IPR
H = 0.709 (3D),
Internal Coolant Supply
Overhang 1.378"

Drilling on slanted surfaces

Tool: MDF 0500S2D
Part Material: Alloy Structural Steel
Cutting Conditions:
v_C=213 SFM, f=0.003 IPR
H = 0.393", External MQL

Prevents burrs and conical remnants on tool withdrawal

Tool: MDF 1000S2D
Part Material: Low Carbon Steel
Cutting Conditions:
v_C=246 SFM, f=0.0047 IPR
H = 0.197", External MQL

■ Distinguishing flat drills, general-purpose drills and endmills

Tool	Flat Drill MDF Type		General-Purpose Drill GS/HGS Type		Endmill for Spot Facing GSXMILL Slot	
Shape of hole base						
Drilling in flat surfaces	○	Approx. 1/2 the feed of a general-purpose drill	◎	Best	△	Only for low feed 1D or smaller ≤1/5 the feed of a general-purpose drill
Drilling non-flat surfaces	◎	Ideal (2D or smaller recommended)	×	Impossible	○	Only for low feed 1D or smaller ≤1/2 the feed of a flat drill
Traverse Cutting	×	Impossible	×	Impossible	◎	Best

■ Product Range

Coolant Supply	Cat. No.	Diameter Range (Inch / *mm*)	Hole Depth (L/D)

Grade: ACF75

Recommended Cutting Conditions

1. The recommended hole depth is 2 x DC. The depth is measured from the highest point of the hole when drilling in inclined surfaces.
2. The recommended cutting conditions are those for drilling in flat horizontal surfaces.
3. Adjust the feed rate according to the inclination angle when drilling in an inclined surface.
4. Set the feed rate at 70% or lower when the inclination angle is 30° or less.
5. Set the feed rate at 50% or lower when the inclination angle is larger than 30°.
6. This product is a drilling tool. Do not use it for traverse cutting or helical milling.

(v_c: Cutting Speed (SFM), f: Feed Rate (IPR))

Grade: ACF75

*A prepared hole with the same diameter or centring hole with a larger diameter than the tool is needed for drilling with this tool.

★: Worldwide Warehouse Item

MDF-L Long Style (External Coolant Supply)

Recommended Cutting Conditions

1. A prepared hole with the same diameter is needed for drilling with this tool.
2. A prepared hole with the same diameter is recommended for the cutting conditions.
3. The recommended hole depth is 5 x DC. The depth is measured from the highest point of the hole when drilling in inclined surfaces.
4. This product is a drilling tool. Do not use it for traverse cutting or helical milling.

Grade: ACF75 ●: USA Stocked Item ★: Worldwide Warehouse Item

*A prepared hole with the same diameter or centring hole with a larger diameter than the tool is needed for drilling with the 5D tool.

Recommended Cutting Conditions for 3D

1. The recommended hole depth is 3 x DC. The depth is measured from the highest point of the hole when drilling in inclined surfaces.
2. The recommended cutting conditions are those for drilling in flat horizontal surfaces.
3. Adjust the feed rate according to the inclination angle when drilling in an inclined surface.
4. Set the feed rate at 70% or lower when the inclination angle is 30° or less.
5. Set the feed rate at 50% or lower when the inclination angle is larger than 30°.
6. This product is a drilling tool. Do not use it for traverse cutting or helical milling.
7. A prepared hole with the same diameter is recommended for machining of stainless steel.

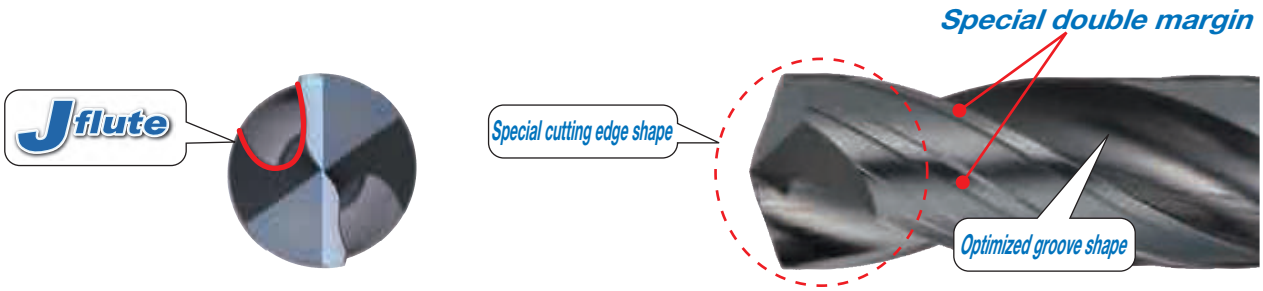
■ General Features

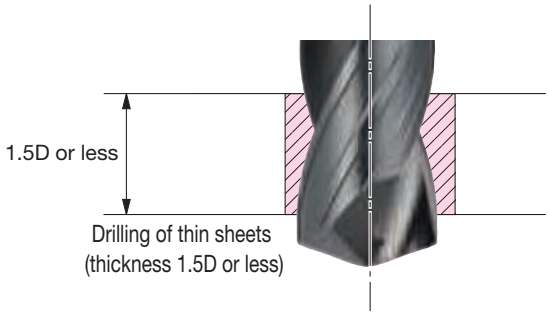
The J flutes of the Super MultiDrill WGS have been tuned for improved chip breaking capabilities during drilling of thin sheets. Excellent sharpness prevents work hardening from drilling. The special double margin structure also achieves stable hole diameter accuracy.

■ Features and Applications

J flutes (groove shape) have been tuned to create a optimized shape for drilling of thin sheets.



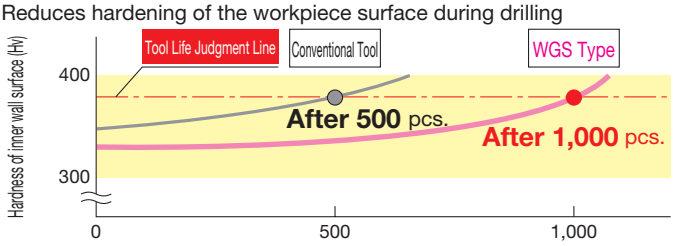
■ Target Workpieces



[Ideal for Common Automotive Components]
- Bearing hub (inner and outer rings)
- Knuckle
- Differential ring
- Components such as bolt holes in automobile flange parts

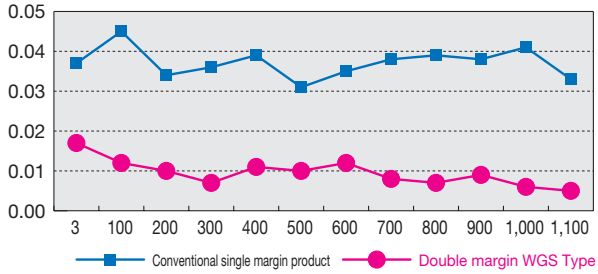
■ Cutting Performance

● Reduces hardening of the workpiece surface during drilling



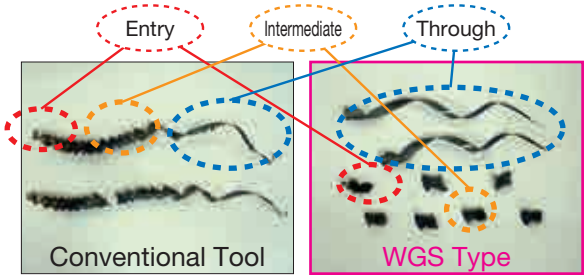
Work Material: S53C
Cutting Conditions: v_c=230 SFM, f =0.008 IPR
H=0.512”

● Stable hole expansion tolerance



Work Material: S50C
Cutting Conditions: v_c=262 SFM, f =0.01 IPR
H=0.630”

● Better chip breaking capabilities



Work Material: SUJ2
Cutting Conditions: v_c=262 SFM, f =0.01 IPR
H=.512”

DEX Coating 2D

*Refer to N74 for the tolerance of h6 and h8

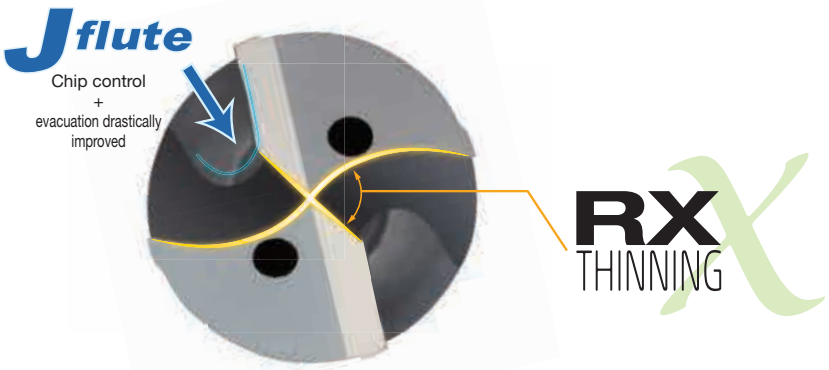
Min. - Max.

* The recommended cutting conditions are also affected by factors such as machine rigidity and the workpiece clamping. Please adjust the cutting conditions according to your work environment.
* If work hardening occurs during drilling, it is recommended to use a lower speed than the recommended cutting conditions.

■ General Features

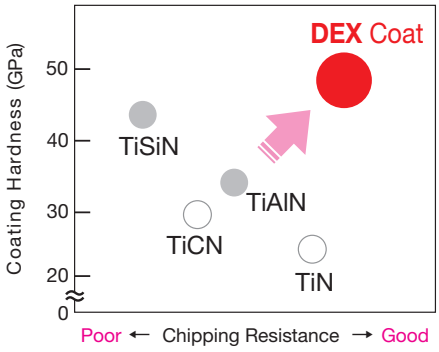
Strong MultiDrill HX Type is a special drill for cast iron that combines reduced cutting resistance and improved drill strength to achieve stable and high efficiency drilling of cast iron.



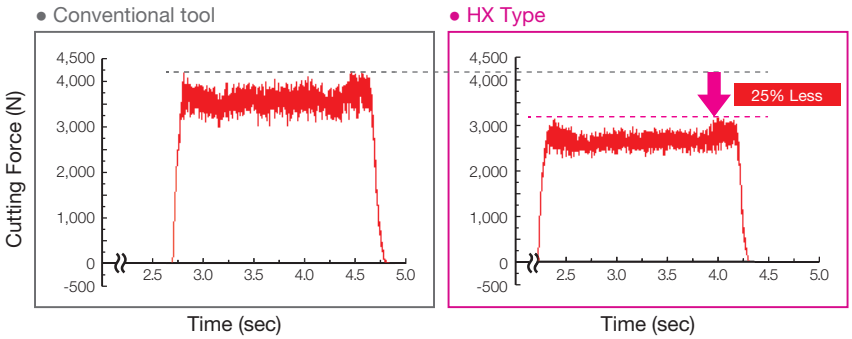
■ Features and Applications

- High-Efficiency Drilling of Cast Iron
  Thick web and a special double margin design ensure stable behavior even in high-efficiency drilling.
  Furthermore, RX THINNING drastically reduces cutting force and ensures more stable and efficient drilling.
  Enables high-efficiency drilling at speeds of over v_f=39.4 IPM. (for ø10mm sizes)

- Long Tool Life
  DEX Coat for drills utilizes nano-coating technology that provides more than double the tool life of conventional coatings. The drill guide function is enhanced through optimization of the margin position to prevent breakage due to hole bending.

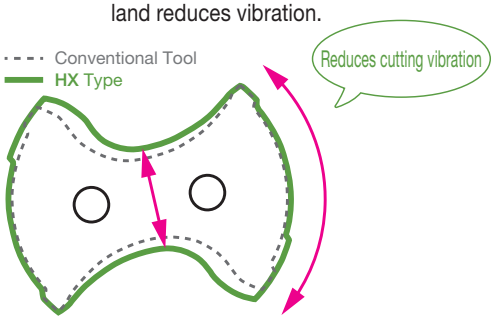


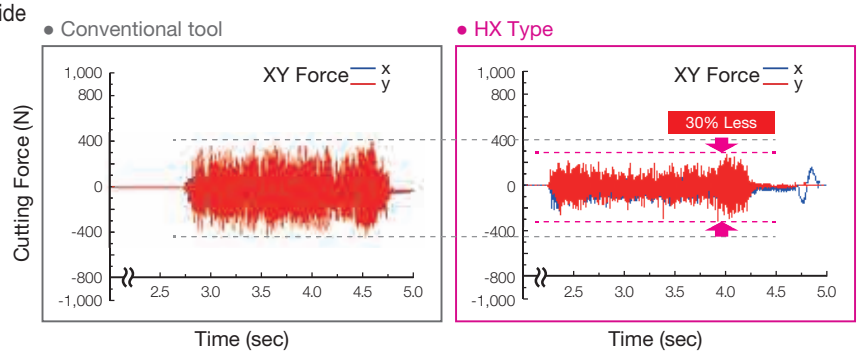
Low Resistance Wide chip pocket reduces thrust resistance.



Part Material : Grey Cast Iron, Tool: Conventional tool, MDW 1250HX5 (ø12.5mm 5D)
Cutting Conditions : v_c=328 SFM, f=0.024 IPR, H=1.979", internal coolant supply (water soluble)

High Rigidity Combination of large web thickness and wide land reduces vibration.



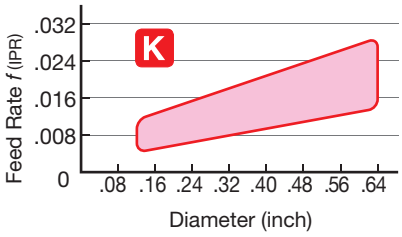


Part Material : Grey Cast Iron, Tool: Conventional tool, MDW 1250HX5 (ø12.5mm 5D)
Cutting Conditions : v_c=328 SFM, f=0.024 IPR, H=1.979", internal coolant supply (water soluble)

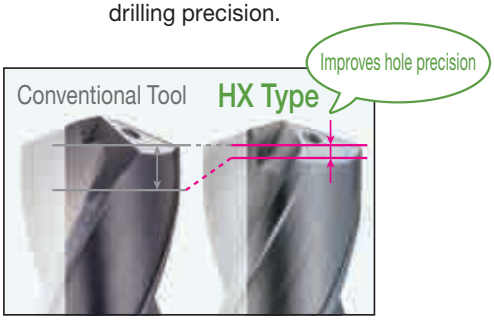
■ Product Range

Coolant Supply	Cat. No.	Diameter Range (mm)	Hole Depth (L/D)	Number of items
Internal	MDW□□□□HX3	ø3.0 to ø20.0	up to 3	108 items in stock
	MDW□□□□HX5	ø3.0 to ø20.0	up to 5	108 items in stock
	MDW□□□□HX8	ø3.0 to ø18.0	up to 8	32 items in stock

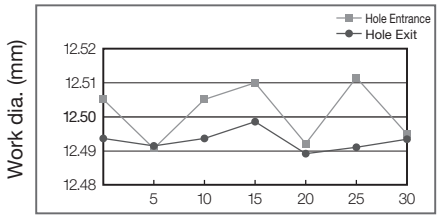
● Drilling of gray cast iron



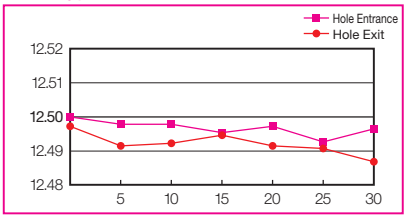
High Precision Improved margin point provides improved drilling precision.



● Conventional tool



● HX Type



Part Material : Grey Cast Iron, Tool: Conventional tool, MDW 1250HX5 (ø12.5mm 5D)
Cutting Conditions : v_c=328 SFM, f=0.024 IPR, H=1.979", internal coolant supply (water soluble)

Longer Tool Life High-feed cutting reduces margin wear and extends tool life.
→ Maintains replacement frequency (cutting time) and enables high efficiency drilling.

● Conventional tool

Cutting Conditions: f =0.012 IPR, cutting length: 98 ft. (cutting time 39 minutes)

● HX

Cutting Conditions: f =0.012 IPR, cutting length: 98 ft. (cutting time 39 minutes)

● HX

Cutting Conditions: f =0.024 IPR, cutting length: 197 ft. (cutting time 39 minutes)

Part Material: Grey Cast Iron, Tool: Conventional tool, MDW 1250HX5 (ø12.5mm 5D)
Cutting Conditions : v_c=328 SFM, f=0.024 IPR, H=1.979", internal coolant supply (water soluble)

■ Application Examples

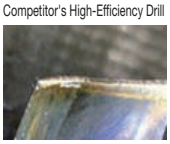
Machine Component Grey Cast Iron

·Tool: MDW 1850HX5 (ø18.5mm 5D)
·Drilling Distance: 164 ft.
·Cutting Conditions: v_c=230 SFM, f =0.035 IPR,
H=88.6 ft. (stop), internal coolant supply (water soluble)

Reduced cutting edge wear in ultra-high-speed drilling.

Cutting Edge Rake Face Condition after Preset Tool Life

Competitor's High-Efficiency Drill

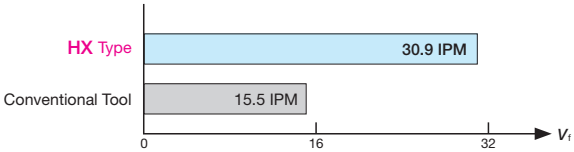


HX Type

Facility Component Ductile Cast Iron

·Tool: MDW 0850HX5 (ø8.5mm 5D)
·Drilling Distance: 164 ft.
·Cutting Conditions: v_c=230 SFM, f=0.012 IPR v_f=30.9 IPM,
H=88.6 ft. (stop), internal coolant supply (water soluble)

Double the drilling efficiency of conventional tools.



Engine Component Ductile Cast Iron

·Tool: MDW 1200HX3 (ø12.0mm 3D)
·Drilling Distance: 164 ft.
·Cutting Conditions: Conventional Tool: v_c=179 SFM, f =0.0087 IPR, v_f=11.48 IPM
HX Type: v_c=164 SFM, f =0.0157 IPR, v_f =20.88 IPM
H=91.9 ft. (stop), internal coolant supply (water soluble)

Stable cutting performance with 1.8 times the drilling efficiency of conventional tools.

Cutting Edge Wear Comparison after Fixed Tool Life

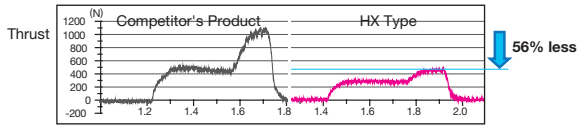
Conventional tool (f =0.0087 IPR)

HX Type (f =0.0157 IPR)

Machine Components (Sintered Material)

·Tool: MDW 0570HX3
·Cutting Conditions: v_c=230 SFM, f=0.035 IPR H=88.6 ft. (stop),
internal coolant supply (water soluble)

Less resistance and edge chipping than competitor's products!



Competitor's Product

Hole Entrance

HX Type

No edge chipping

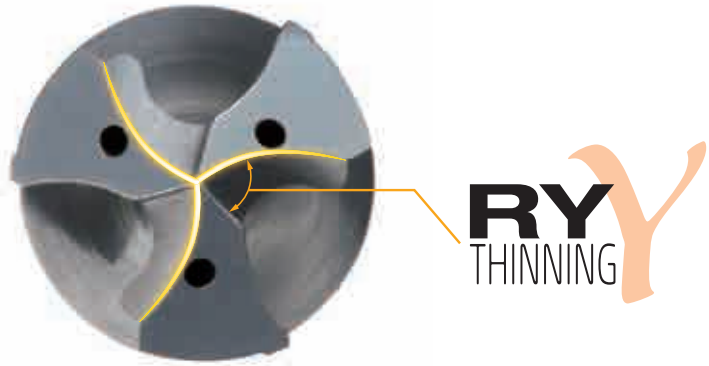
■ General Features

Strong MultiDrill HY Type is a 3-flute drill that achieves stability and high efficiency in machining of steel and cast iron, reducing the load on each flute and extending the tool life.



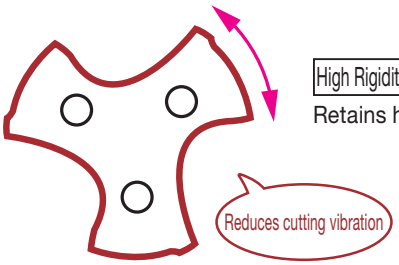
■ Features and Applications

- High-Efficiency Drilling of Steel and Cast Iron

  Thick web and 3-point margin design ensures stable hole diameter accuracy in high-efficiency drilling.
  RY THINNING also reduces cutting force in high-efficiency drilling.
  Applicable to cutting conditions exceeding v_f=31.5 IPM in steel drilling and v_f=39.4 IPM in cast iron drilling. (for ø10mm sizes)

- Long Tool Life

  DEX Coat for drills utilizes nano-coating technology to provide more than double the tool life of conventional coatings.
  3-point margin design gives excellent guide performance for vibration control and long, stable tool life.



High Rigidity
Retains high rigidity with a wide land.

J flute

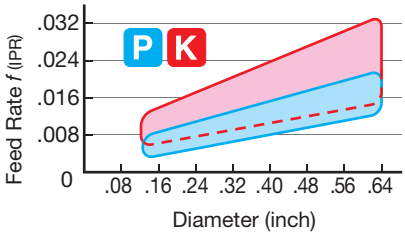
Evacuation
Drastically improved chip control and evacuation

Improves chip evacuation

■ Product Range

Coolant Supply	Cat. No.	Diameter Range (mm)	Hole Depth (L/D)	Number of items
Internal	MDW□□□□HY3	ø5.0 to ø16.0	up to 3	23 items in stock
	MDW□□□□HY5		up to 5	23 items in stock
	MDW□□□□HY8		up to 8	6 items in stock

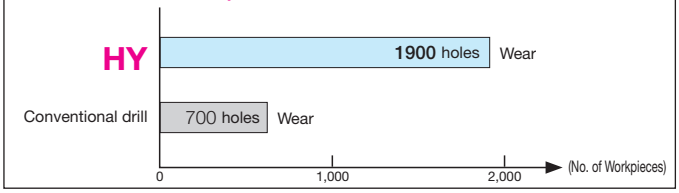
- Drilling of general steel and gray cast iron



■ Application Examples

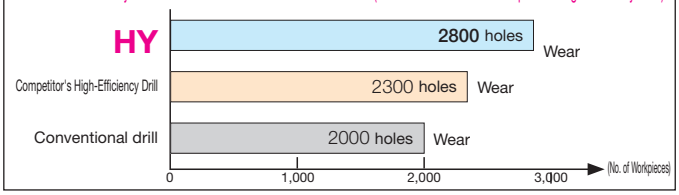
Machine components Alloy Steel
·Tool: MDW 1250HY3 (ø12.5mm 3D)
·Cutting Conditions: Conventional Tool : v_c=295 SFM, f =0.01 IPR, v_f=22.6 IPM
HY Type : v_c=230 SFM, f =0.0157 IPR, v_f=28 IPM
H=12mm (through), internal coolant supply (water soluble)

1.25 times the efficiency and 2.7 times the tool life of conventional drills



Machine components Ductile Cast Iron
·Tool: MDW 1020HY3 (ø10.2mm 3D)
·Cutting Conditions: Conventional Tool : v_c=230 SFM, f =0.011 IPR, v_f=24 IPM
HY Type : v_c=262 SFM, f =0.024 IPR, v_f=59 IPM
H=28mm (stop), internal coolant supply (water soluble)

2.5 times the efficiency and +1.4 times the tool life of conventional drills (1.2 times the tool life of competitors' high-efficiency drills)



Carbon Steel/ Alloy Steel up to 0.28% | Carbon Steel/ Alloy Steel from 0.29% | Cast Iron | Ductile Cast Iron

DEX Coating | Coolant Hole | 3D | 5D | 8D

■ General Features

SGS type drills for heat-resistant alloys employ a sharp cutting edge to reduce heat during drilling (reduces cutting force) and provide a long, stable tool life.

■ Features and Applications

Long tool life

- Combination of optimised cutting edge design and dedicated grade significantly reduces wear.
- Minute honing (edge treatment) amount and special thinning shape reduce cutting force. This reduces cutting edge breakage.
- Perfect for drilling Ni-based heat-resistant alloys (Inconel/Waspaloy/Hastelloy).

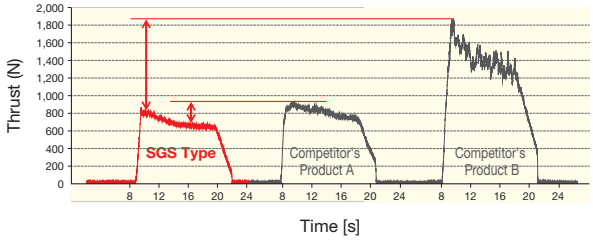
■ Product Range

Cat. No.	Diameter Range (*mm*)	Hole Depth (L/D)
MDW□□□□SGS3	*ø3.0 to 12.0*	up to 3

■ Performance

Comparison of Cutting Force (Thrust)

Low Resistance (Reduced Load on Cutting Edge)



Tool Diameter : *ø6.0mm*
Part Material : Inconel 718
Cutting Conditions : v_c=33 SFM, *f* =0.003 IPR, *H*=0.315" (through), external coolant supply

Tool Life Comparison

Long Tool Life (No Fracturing or Breakage)

Tool	SGS Type	Competitor's Product A	Competitor's Product B
No. of Workpieces	Able to Continue after 50 Holes	Breakage after 30 Holes	Breakage after 5 Holes

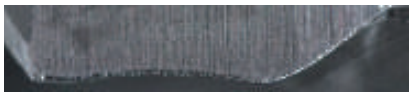
Tool Diameter : *ø6.0mm*
Part Material : Inconel 718
Cutting Conditions : v_c=33 SFM, *f* =0.003 IPR, *H* =0.630" (stop hole), external coolant supply

■ Application Examples

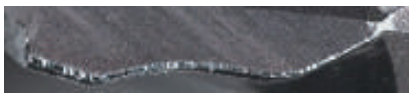
Comparison of Cutting Edge Wear after 30 Holes

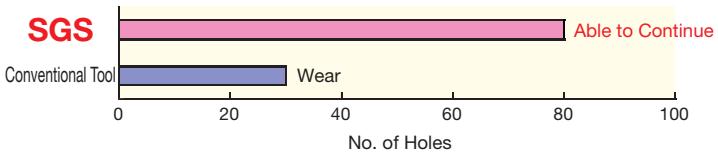
Significantly Reduced Flank Wear

SGS



Conventional Tool





Tool : MDW 0600SGS3
Part Material : Inconel 718 (aeronautic components)
Cutting Conditions : v_c=33 SFM, *f* =0.0023 IPR, *H*=0.118" (through), external coolant supply

SGS Type (External Coolant Supply)

Stainless Steel | Ti Alloy | Heat-resistant Steel

PVD Coat | 3D

*Refer to N74 for the tolerance of h6 and h8

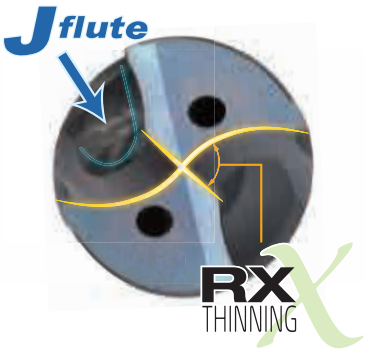
XHGS / PHT

■ General Features

Super MultiDrill XHGS, a next-generation drill specialized for deep hole drilling, features high drill strength and stable chip control to further enhance efficiency of deep hole drilling.

■ Features

- Deep hole drilling
  - New groove shape (J flute) achieves improved chip control during deep hole drilling
  - High-efficiency drilling at over v_f=39.37 IPM at depths 20 times the drill diameter (diameter ø5, equivalent to S48C)
  - Special web thinning shape (RX thinning) reduces cutting force during high-efficiency machining
- Long tool life
  - Special DEX Coat provides long tool life on a wide variety of work materials
  - Improved chip evacuation makes it possible to reduce spindle load fluctuation, ensuring long, stable tool life
- Eco-Friendly
  - Compatible with the MQL (Minimum Quantity Lubrication) system
  - Compatible with dual-fluid mist (simultaneous spray of oil and water)



■ Product Range

Applications	Cat. No.	Diameter Range (*mm*)	Hole Depth (L/D)
Deep Hole Drilling	MDW□□□□XHGS10	*ø2.1 to 16.0*	up to 10
	MDW□□□□XHGS12	*ø2.5 to 16.0*	up to 12
	MDW□□□□XHGS15	*ø2.1 to 16.0*	up to 15
	MDW□□□□XHGS20	*ø2.1 to 14.0*	up to 20
	MDW□□□□XHGS25	*ø2.1 to 12.0*	up to 25
	MDW□□□□XHGS30	*ø2.1 to 10.0*	up to 30
For Guide Holes	MDW□□□□PHT	*ø2.1 to 16.0*	up to 2

■ Application Examples

● Automotive components (Medium Carbon Steel)

Tool : ø5.0x115mm (PHT), ø5.0x170mm (XHGS Type)
Machine : Horizontal single-spindle NC machine
Coolant : MQL (air pressure 0.5MPa, volume approx. 4cc/h)
Cutting Conditions : v_c=262 SFM, *f* =0.011 IPR, *H* =3.346" per hole (3 holes per unit)
Tool life : 500 units (371 ft.)

● Automotive components (Structural Carbon Steel)

Tool : ø6.0x170mm (PHT), ø6.0x230mm (XHGS Type)
Machine : Horizontal single-spindle NC machine
Coolant : MQL (air pressure 0.5MPa, volume approx. 40cc/h)
Cutting Conditions : v_c=262 SFM, *f* =0.007 IPR, *H* =4.33" per hole (4 holes per unit)
Tool life : 150 units (371 ft.)

● Automotive components (Ductile Cast Iron)

Tool : ø5.0x105mm (PHT), ø5.0x155mm (XHGS Type)
Machine : Horizontal single-spindle NC machine
Coolant : MQL (air pressure 0.4MPa, volume approx. 4cc/h)
Cutting Conditions : v_c=165 SFM, *f* =0.007 IPR *H* =2.362" per hole (5 holes per unit)
Tool life : 400 units (394 ft.)

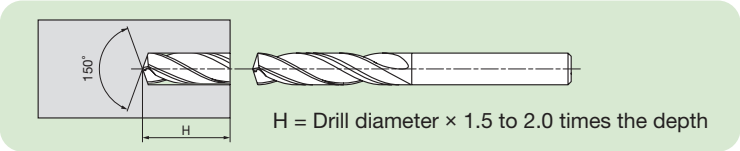
● Machine components (1045 Steel)

Tool : ø6.0x90mm (PHT), ø6.0x145mm (XHGS Type)
Machine : Horizontal single-spindle NC machine
Coolant : MQL (air pressure 0.5MPa, volume approx. 60cc/h)
Cutting Conditions : v_c=262 SFM, *f* =0.0078, *H* =2.44" per hole (3 holes per unit)
Tool life : 550 units (341 ft.)

■ Recommended Drilling Method

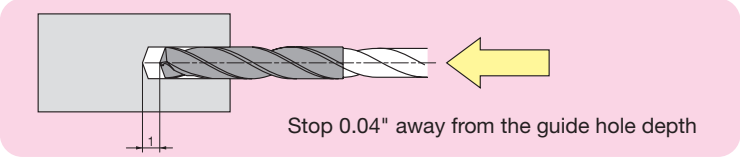
(1) Make a guide hole using the PHT

- Select the same nominal diameter for the PHT type dedicated guide hole drill as the XHGS type deep hole drill. (The guide drill diameter is designed to be 0.02 mm to 0.05 mm larger than the long drill diameter.)



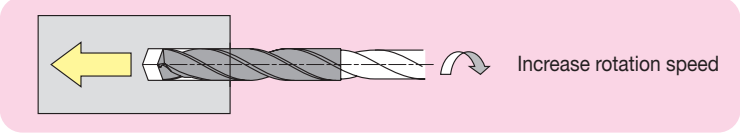
(2) Feed the XHGS deep hole drill through the guide hole at low rotation speed

- Spindle Speed: 500 RPM
- Feed Rate: 39 to 78 IPM



* If the drill is inserted into the guide hole at the set cutting speed, peripheral run-out may cause damage to the drill's peripheral edges.

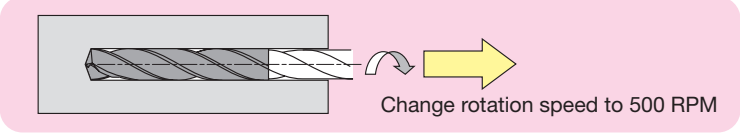
(3) Increase rotation speed until the set cutting speed is reached, then start normal drilling operation



* On some NC machines, the feed command may be activated before the set spindle speed is reached, so it is recommended to enter a dwell sequence before the feed command.

(4) After drilling, rotation speed is reduced and the drill is retracted from the work material

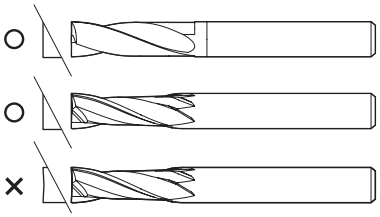
- Spindle speed: 500 RPM Feed rate: 39 to 78 IPM



* Retracting a drill from the work material at a high rotation speed is dangerous as doing so may result in breakage due to runout.

(5) Other notes

- A flat base should be prepared first if the entry side is a non-flat surface (slanted surface, cylindrical surface, etc.).



Spot facing using an endmill or flat MultiDrill MDF type (see page J44)

Concave ended endmills cannot be used.

- If the exit side is a non-flat surface, reduce the feed rate to f=0.002 IPR immediately before the breakthrough point to prevent the drill from breaking or burrs from forming.

■ Coolant

(1) Internal coolant supply

- Use coolant equivalent to JIS A1-1 (emulsion).
- Pump pressure Steel: 1. 5 to 2. 0MPa (higher pressure results in a stronger cooling effect, which affects chips and wear)
  Cast iron and aluminum alloy: 4. 0 to 6. 0MPa (prioritize cooling performance)

(2) Internal MQL

- Air pressure : 0.5MPa or greater
- Evacuation volume : It is recommended to set the maximum evacuation volume for your equipment.
  *Consult the manufacturer if you intend to machine aluminum alloy.

(3) Internal dual-fluid mist

- Air pressure : 0.5MPa or greater
- Evacuation volume : It is recommended to use the optimal setting for your equipment.

XHGS / PHT (Internal Coolant Supply)

Carbon Steel/ Alloy Steel up to 0.28% | Carbon Steel/ Alloy Steel from 0.29% | Tempered Steel | Hardened Steel up to 45HRC | Stainless Steel | Cast Iron | Ductile Cast Iron

■ Features

- High-efficiency drilling

  DLC Coating (AURORA Coat) and low resistance WL (Wide L) thinning drastically reduce cutting force.

- Stable drilling performance

  Special cutting edge design and WW (Wide W) margin improve hole quality.

- Long tool life

  DLC Coating (AURORA Coat) coupled with the cutting edge shape acheives a long and stable tool life.

- Deep hole drilling

  Drills for deep hole drilling can be made to oder.
  (Production range: Drill diameters: *ø3.0 to ø16.0mm*
  Overall length: Available on inquiry)

■ Product Range (Stocked Sizes)

Coolant Supply	Cat. No.	Diameter Range (*mm*)	Hole Depth (L/D)
Internal	**MDW□□□□NHGS3**	*ø3.0 to 16.0*	up to 3
	MDW□□□□NHGS5		up to 5
	MDW□□□□NHGS10	*ø3.0 to 13.0*	up to 10

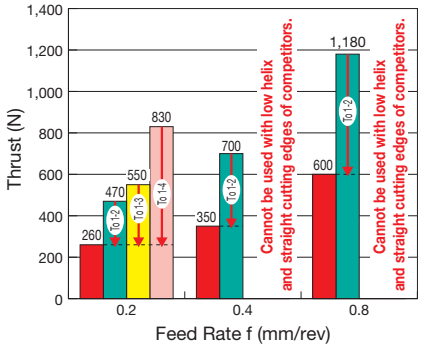
■ Performance

Cutting force

- Low cutting force, achieving 2 to 4 times the feed rate

  The cutting force of the NHGS is
  1/2 that of competitors' 30° helix drills > double the feed rate!
  1/3 that of competitors' light helix drills > 3x the feed rate!
  1/4 that of straight-blade drills > 4x the feed rate!

Thrust



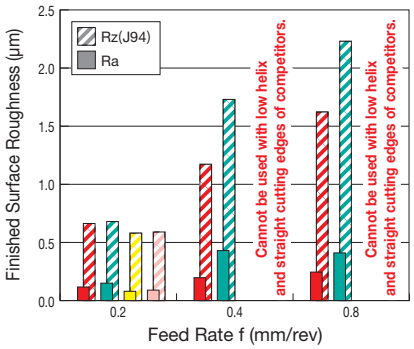
Tool: MDW 0800NHGS5 (DL1300)	Part Material: Aluminum Alloy Die Casting
Cutting Speed: v_c=656 SFM	Machine: Vertical machining center (BT30)
Coolant: Internal supply (1.5MPa)	Coolant: Emulsion (dilute to around 25x)

Machined surface quality

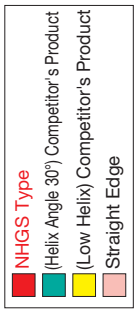
- Achieves good surface roughness over a wide range of feed rates

  Good surface roughness from low to high feed rates:
  Ra=0.11 to 0.25
  Rz (J94)=0.66 to 1.62

Finished Surface Roughness



Legend (common)



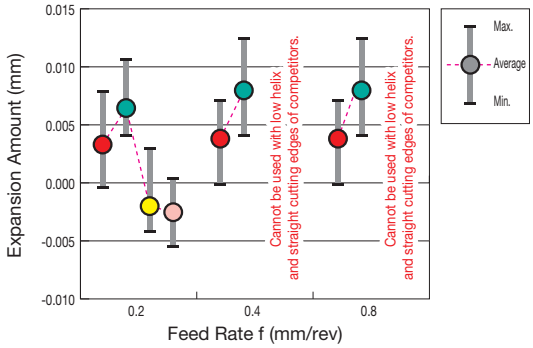
Tool: MDW 0800NHGS5 (DL1300)	Part Material: Aluminum Alloy Die Casting
Cutting Speed: v_c=656 SFM	Machine: Vertical machining center (BT30)
Coolant: Internal supply (1.5MPa)	Coolant: Emulsion (dilute to around 25x)

Machined hole accuracy (hole expansion)

- Stable hole accuracy with hole expansion within 0.01mm

  Achieves minimal expansion and stable machining from low to high feed rates

Hole diameter expansion



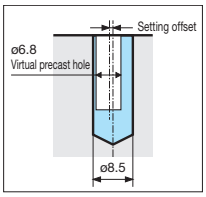
Tool: MDW 0800NHGS5 (DL1300)	Part Material: Aluminum Alloy Die Casting
Cutting Speed: v_c=656 SFM	Machine: Vertical machining center (BT30)
Coolant: Internal supply (1.5MPa)	Coolant: Emulsion (dilute to around 25x)

Machined hole accuracy (hole position accuracy)

- Pre-cast hole accuracy within ±1/10 to ±1/5 of axial offset

Pre-cast hole accuracy (hole position accuracy)

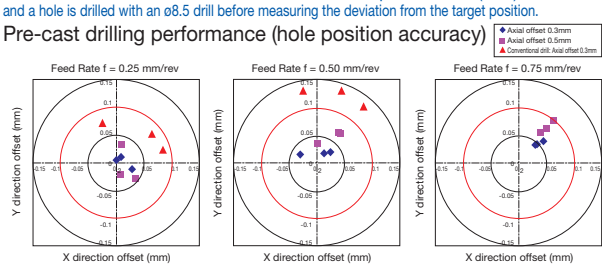
Offset \ Feed Rate	*0.25mm/rev*	*0.50mm/rev*	*0.75mm/rev*
0.3mm	*±0.03mm*	*±0.04mm*	*±0.06mm*
0.5mm	*±0.05mm*	*±0.07mm*	*±0.10mm*
Conventional drill: 0.3mm	*±0.09mm*	*±0.19mm*	



- Test method

An axial offset of 0.3mm to 0.5mm is set for a virtual pre-cast hole (ø6.8) and a hole is drilled with an ø8.5 drill before measuring the deviation from the target position.

Pre-cast drilling performance (hole position accuracy)



Tool: MDW 0850NHGS5 (DL1300)	Part Material: Alluminum Alloy
Cutting Speed: v_c=656 SFM (n=7, 489 RPM)	Machine: Vertical machining center (BT30)
Coolant: Internal supply

SDC Series (External Coolant Supply)

■ General Features

Diamond Coating SDC (SUMIDIA) drills for carbon fiber reinforced polymers (CFRP) employ Sumitomo's proprietary multi-step point angle. Combined with a diamond coating, this technology improves machined surface quality and extends tool life.

■ Product Range

Cat. No.	Diameter Range (mm)	Point Angle	Hole Depth (L/D)
MDS□□□□□SDC3	ø2.0 to ø4.0	90°	up to 3
	ø4.851 to ø10.0	130°	

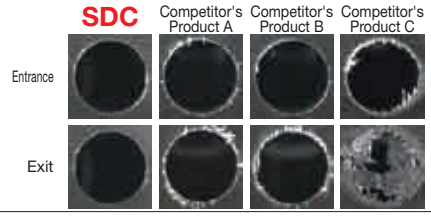
■ Features and Applications

- Excellent Drilled-Hole Quality
  - Sharp cutting edge shape reduces delamination of fiber layers and minimizes burrs.
  - Continuously changing point angle, disperses the load placed on the cutting edge and preventing breakage.
- Long Tool Life
  - Utilizing a high-strength diamond coating with excellent adhesion, delivering high quality and long tool life.

■ Performance

Comparison of Machined Surface Quality

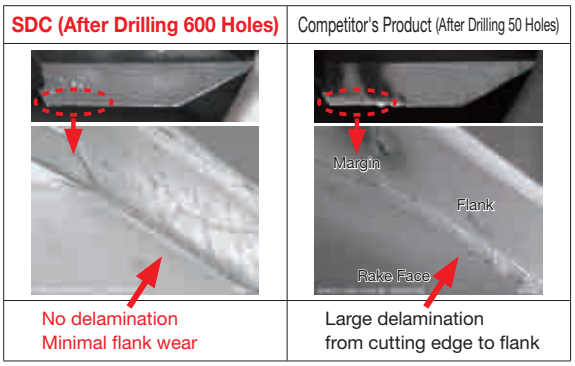
Excellent machined surface quality
Prevents delamination and burrs



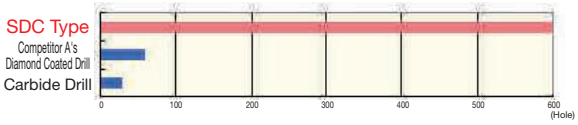
Tool: SUMIDIA COAT Drill SDC ø6.35
Part Material: CFRP
Cutting Conditions: n =6,000 SFM, f =0.004 IPR H =91.86" (through), dry

Tool Life Comparison

Effects of Diamond Coating



Stable diamond layer adhesion prevents delamination.
Excellent wear resistance enables high-quality drilling with long tool life.



Tool: SUMIDIA COAT Drill ø6.35
Part Material: CFRP
Cutting Conditions: n =6,000 SFM, f =0.003 IPR, H =49.2" (through), dry

SUMIDIA Coat | 3D

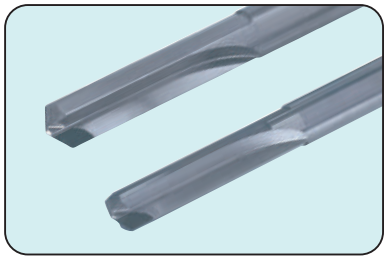
DAL / DDL

Aluminum Alloy | Composite CFRP

PCD 3D



For General to High Precision Drilling of Aluminum Alloys

- High precision DAL is able to produce holes of IT Class of 7 to 8.
- General DDL is able to produce holes of IT class 11 to 12, mainly for pre-tap hole drilling.

This product is a made-to-order item.

Min. - Max.

Important Notes

- When using DAL type for high precision machining, select a high rigidity machine and high precision holder.
- Supply coolant generously at the entrance of the hole.

MLDH-L / MLDH-P

■ General Features

Micro Long Drills are oil-hole drills for high efficiency drilling that were developed for drilling deep, small-diameter holes. These next-generation drills for small diameter deep holes feature improved strength - addressing a frequent problem with small diameter drills.

■ Features and Applications

- Deep hole drilling
  New groove shape ensures good drill rigidity and chip evacuation.
  High-efficiency drilling to depths of over 20 times the drill diameter at over v_f=*500mm/min* (drill diameter ø1.3, Stainless Steel). Optimal thinning and edge balance for stable chip control.
- Long tool life
  Special coating provides long tool life with a wide variety of work materials.
  Improved chip evacuation makes it possible to reduce spindle load fluctuation, ensuring long, stable tool life.

■ Product Range

Applications	Cat. No.	Diameter Range (*mm*)	Hole Depth (L/D)

■ Application Examples

● Automotive component molds - Stainless Steel

Tool : MLDH 1400L20 (guide: MLDH1400P)
Machine : Vertical machining center (HSKA63)
Coolant : Internal coolant supply (emulsion type, pump source pressure: 4MPa)
Cutting Conditions : v_c=197 SFM, *f* =0.001 IPR, *H* =0.827"
Tool Life : 600 holes (37.4 ft.)

● Tooling components - Tool Steel

Tool : MLDH 1900L20 (guide: MLDH1900P)
Machine : Vertical machining center (HSKA63)
Coolant : Internal coolant supply (emulsion type, pump source pressure: 4MPa)
Cutting Conditions : v_c=195 SFM, *f* =0.004 IPR, *H* =1.063"
Tool life : 600 units

MLDH-L / MLDH-P (Internal Coolant Supply)

★: Worldwide Warehouse Item

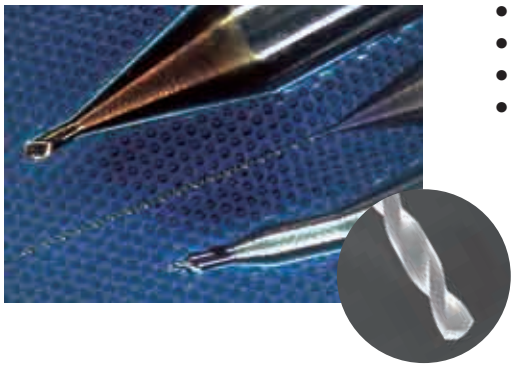
MDUS / MDSS

Carbon Steel/ Alloy Steel up to 0.28% | Carbon Steel/ Alloy Steel from 0.29% | Stainless Steel | Aluminum Alloy | Copper Alloy

For Steel, Stainless Steel and Other Metals



■ Micro Drill: MDUS ø0.03 to ø0.19mm

- High-precision shank (Shank tolerance h3, circularity 0.3μm or less, cylindricity 0.5μm or less)
- New ultra-thin TiAlN coating gives improved wear resistance
- Perfect for drilling steel, stainless steel, or copper
- Available from *ø0.03 mm to ø0.19 mm in 0.005 mm* increments

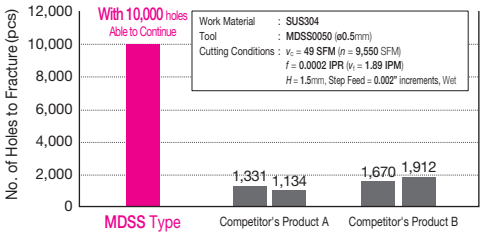
■ Application Examples

Part Material : 304 Stainless Steel
Tool : MDUS 0030-30C (ø0.03mm)
Cutting Conditions : n = 15,000 RPM, v_f = 0.118" IPM
Step Feed = 0.0001"

Part Material : 316 Stainless Steel
Tool : MDUS 0100-30C (ø0.04")
Cutting Conditions : n = 20,000 RPM, v_f = 0.787 IPM
Step Feed = 0.0004"

■ Solid Carbide MINI Drill: MDSS ø0.20 to ø1.00mm

- The combination of a hard, tough carbide substrate and a high-rigidity design (web thickness, flute width ratio, helix angle) greatly improves fracture resistance
- PVD coating designed for small drills significantly extends tool life
- Can be used for a wide range of work materials including carbon steel, alloy steel, die steel, and stainless steel
- Shanks standardised to ø3mm diameter and overall length of 38mm for greater ease of use



MDSS Recommended Cutting Conditions (Wet) <Inquire about cutting conditions for the MDUS type>

1. The conditions on the left are recommended under wet conditions, using water-soluble coolant.
2. If cutting noise and vibration are present, please adjust the cutting conditions accordingly.
3. If the machine cannot achieve the standard spindle speed, please use the maximum spindle speed available. In this case, lower the feed rate by the same ratio.

* Step feed is recommended for drilling of holes deeper than 3xD (D=drill diameter).

■ Micro Pointing Drill MDUP ø0.03 to ø0.18mm

- For drilling guide holes for MDUS drills

For Ceramics and Non-metals

■ Made-to-order Fine Drills ø0.02mm up

- Dedicated cutting edge designs are available for various work materials including non-metals, ceramics, and resins
- Customized designs are also available for improved efficiency, such as integration of processes by using a stepped drill
- Various drill diameters (from ø0.02) and LxDs are available to order (Contact us for possible profiles)

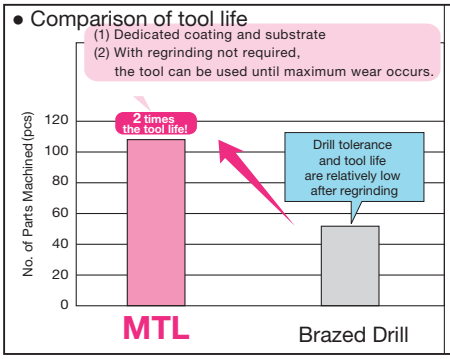
■ Features

Indexable type drill with exchangeable drill head, which has a radial serration design, for high precision and strength.
An exchangeable drill head provides a new cutting edge, higher productivity and cost efficiency with easy tool management.
Regrinding allowance of 0.059" to 0.118" (*1.5mm to 3mm*) makes further tool cost reductions possible.* Regrinding is available only for MTL/MEL/MB Type

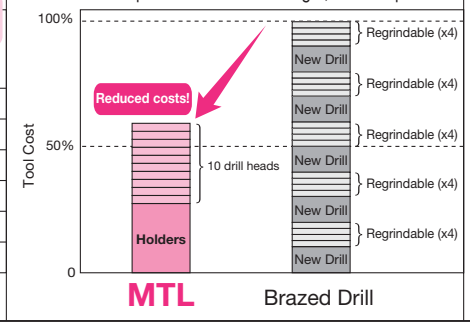
Tip	Holder (L/D)		Applications	øDc range
MTL	1.5D / 1.5DF	1.5XD	General Steel	ø0.4688" to ø1.2125" (*ø12.0 to ø30.8mm*)
	M / 3D / 3DF	3XD		ø0.4688" to ø1.6732" (*ø12.0 to ø42.5mm*)
	L / 5D / 5DF	5XD		
	D / 8D / 8DF	8XD		
	12D	12XD		ø0.5315" to ø1.0157" (*ø13.5 to ø25.8mm*)
MEL / MTL-C	1.5D / 1.5DF	1.5XD	Stainless Steel, Super Alloy, Cast Iron	ø0.4688" to ø1.2125" (*ø12.0 to ø30.8mm*)
	M / 3D / 3DF	3XD		ø0.4688" to ø1.2125" (*ø12.0 to ø30.8mm*)
	L / 5D / 5DF	5XD		
	D / 8D / 8DF	8XD		
	12D	12XD		ø0.5315" to ø1.0157" (*ø13.5 to ø25.8mm*)
NAL	M / 3D / 3DF	3XD	Non-Ferrous, Aluminum Alloys	ø0.4688" to ø1.2500" (*ø12.0 to ø31.75mm*)
	L / 5D / 5DF	5XD		
	D / 8D / 8DF	8XD		
MFS	1.5D	1.5XD	Spot Facing	ø0.4688" to ø1.1875" (*ø12.0 to ø30mm*)
	M / 3D / 3DF	3XD		ø0.4688" to ø1.1875" (*ø12.0 to ø30mm*)
	L / 5D / 5DF	5XD		
	D / 8D / 8DF	8XD		
	12D	12XD		ø0.5315" to ø1.0157" (*ø13.5 to ø25.8mm*)

■ Tool Life and Cost

● Comparison of tool life



● Total tool comparison when machining 1,000 workpieces

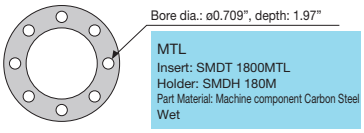


● Conclusion

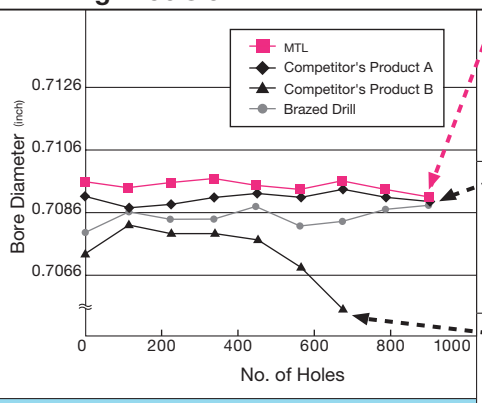
For regrinding purposes, brazed drills are only used for **50-70%** of their actual tool ife potential. **MTL reaches 100%!**

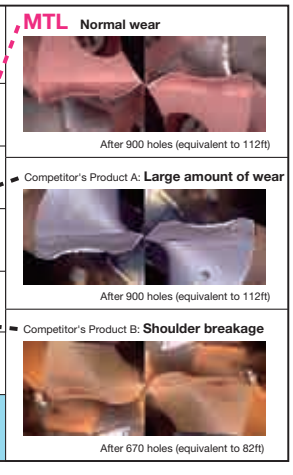
MTL has **double the tool life of brazed drills!** **Shorter tool change time!**

● Workpiece Example



■ Drilling Precision

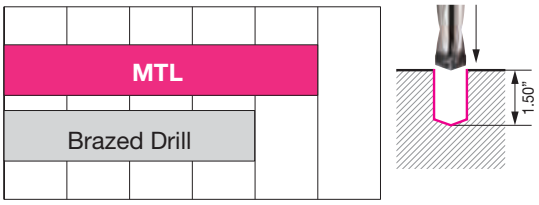




Part Material : Carbon Steel, O.D.: ø0.709"
Cutting Conditions : v_c=230 SFM, f =0.010"
Hole Depth 1.50" (through), wet

■ Tool Strength

● Durability Comparison

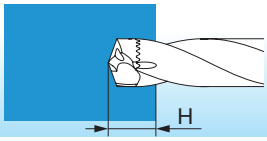


Part Material : Carbon Steel, O.D. : ø0.630"
Cutting Conditions : v_c=262 SFM
Hole Depth : 1.50"

■ Recommended drilling method for 12D: Use a collet, hydro chuck or milling chuck to hold the 12D drill body (tapered collet chuck cannot be used)

(1) Drill a guide hole with SMDHOOOM (3D holder) + MTL (head)

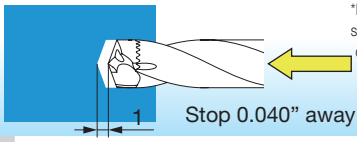
● Use a 3D drill body and a drill head with the same diameter as the 12D (same cat. no.) when drilling the guide hole.



H = Drill diameter × 1 to 1.5 times the depth

(2) Feed the SMDHOOO-12D (12D holder) + MTL Type (head) through the guide hole at a low spindle speed

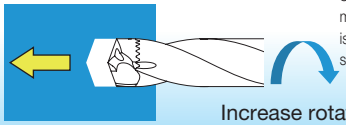
● Spindle speed: 500 RPM ●Feed rate: 39.37 IPM to 78.74 IPM



*If the drill is inserted into the guide hole at the set cutting speed, peripheral run-out may cause damage to the drill's peripheral edges.

Stop 0.040" away from the guide hole depth

(3) Increase spindle speed until the set spindle speed is reached, then start drilling

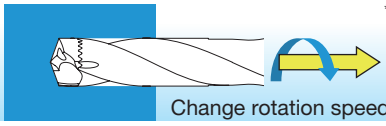


*On some NC machines, the feed command may be activated before the set spindle speed is reached, so it is recommended to enter a dwell sequence before the feed command.

Increase rotation speed

(4) After drilling, rotation speed is reduced and the drill is retracted from the work material

● Spindle speed: 500 RPM●Feed rate: 39.37 IPM to 78.74 IPM



*Retracting a drill from the work material at a high spindle speed, is dangerous as doing so may result in breakage due to runout.

Change rotation speed to 500 RPM

SMDH_1.5D = 1.5x Diameter

SMDH_M, 3D, 3DF = 3x Diameter

SMDH_L, 5D, 5DF = 5x Diameter

SMDH_D, 8D, 8DF = 8x Diameter

SMDH_12D = 12x Diameter

See page J99 for SMDT-NAL recommendations for Non-Ferrous Materials
See page J113 for SMDT-MFS recommendations for 1.5XD

■ Recommended Cutting Conditions

Material		Mild Steel <HB250	General Steel HB250-320	Pre-hardened Steel HRC45	Stainless Steels* (up to 200HB)	Gray Cast Iron	Ductile Cast Iron	Titanium	Inconel
SMD Tip		MTL	MTL	MTL	MEL	MTL-C / MEL	MTL-C / MEL	MEL	MEL
Drill Dia. (Inch)	Speeds/ Feeds	Min - Max	Min - Max	Min - Max	Min - Max	Min - Max	Min - Max	Min - Max	Min - Max

■ Cleaning instructions

1) Air Pressure
Remove the used head and any debris from the serrated parts of the holder with an air nozzle.

2) Brushing
Use a wire or nylon brush to remove debris left behind by air nozzle.

■ Attaching instructions

1) Use caution when tightening the head screws.
2) Hold wrench parallel to SMD body when tightening. Forcing out wrench may cause screw hole breakage.
3) Tighten both screws to recommend torque settings in Tightening Torque chart (right).

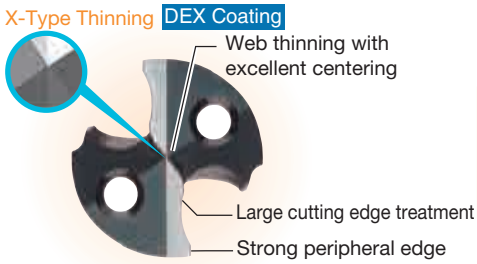
■ Recommended Tightening Torque

Drill Head Size (in/*mm*)	Screw	Recommended Tightening Torque (in/lbs.)	Recommended Tightening Torque (N·m)
.4688 - .6102 *12.00 - 15.50*	BXD02208IP	6.6 to 8.8	0.75 to 1.00
.6103 - .7283 *15.51 - 18.50*	BXD02509IP	8.2 to 11.0	0.93 to 1.24
.7284 - .8464 *18.51 - 21.50*	BXD03011IP	16.3 to 21.6	1.83 to 2.44
.8465 - .9763 *21.51 - 24.80*	BXD03512IP	24.2 to 32.9	2.79 to 3.72
.9764 - 1.0944 *24.81 - 27.80*	BXD04014IP	36.6 to 48.8	4.14 to 5.12
1.0945 - 1.3189 *27.81 - 33.50*	BXD04515IP	44.0 to 58.7	4.98 to 6.64

Caution!

1) Please wear safety gloves and glasses.
2) Please remove SMD from any adapator when replacing SMDT Tip.
3) Serrations may contain some debris. Placing a tip without removing any foreign particles may cause loose screws and possibly lead to tip and body breakage.

MTL Suitable for high-efficiency drilling of general steel

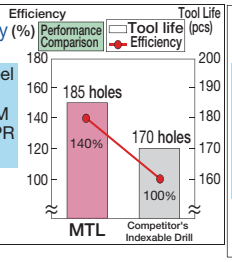


- **Excellent cutting edge strength**
  Large edge treatment reduces breakage of the cutting edge.
- **Stable machined hole accuracy**
  X Type thinning achieves excellent centering on entry and stable drilling.

■ Application Examples: MTL

Improved tool life and efficiency

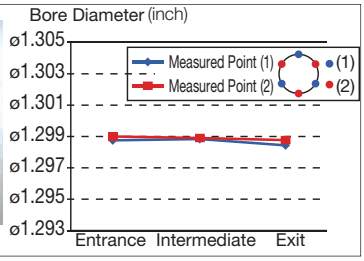
Part Material : Housing Mild Steel
Drill Size : .5905", 5XD
Cutting Conditions : v_c=351 SFM
f=0.0118 IPR
Hole Depth : 1.26" × 12 holes



■ Drilling Precision

High drilling accuracy even with large diameters

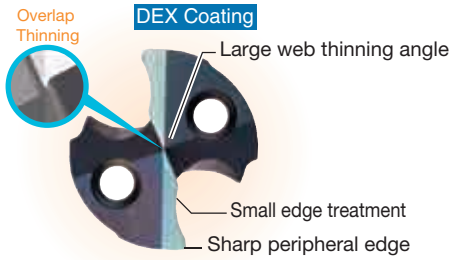
Part Material : Structural Steel Plate (base substrate for construction machinery)
Drill Size : ø1.2992", 5XD
Cutting Conditions : v_c=393 SFM
f=0.0098 IPR
Cutting Environment : Emulsion



MTL-C Chamfered edges to eliminate break out in cast iron

- **45º corner chamfer on diameter**
  Large thinning angle prevents breakage at the convex R-profile portion, particularly when drilling soft steel and it also reduces breakages caused by adhesion when drilling stainless steel.
- **Improved chipping resistance in cast iron**
  Better edge sharpness at the peripheral edge prevents chipping around the hole openings when drilling cast iron.
- **Minimizes burr and chipping at hole exit**
- **Reduces wear on corner**

MEL Suitable for exotic alloys, stainless steel, mild steel, gray cast iron and low rigidity equipment



- **Excellent cutting edge design for SUS and mild steel (SS, etc.)**
  Large thinning angle solves the convex corner breakage issues specific to mild steel and reduces adhesion breakages with SUS.
- **Improved edge chipping resistance in cast iron**
  Edge sharpness improvements in peripheral areas prevent edge chipping around hole openings in cast iron.

■ Application Examples (MEL)

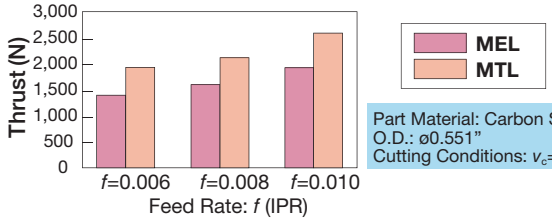
MEL has excellent centering, produces no rifle marks and no cutting edge breakage after 49ft.

Competitor's indexable drill exhibited poor centering and produced rifle marks. The center of the drill broke after 36ft of drilling.

Part Material: 304 Stainless Steel, Drill size: ø0.551" 5XD
Cutting Conditions: v_c=197 SFM, f=0.006", Coolant: Emulsion

■ 25% reduction in cutting force (thrust)

- The MEL features 25% lower thrust than the MTL!

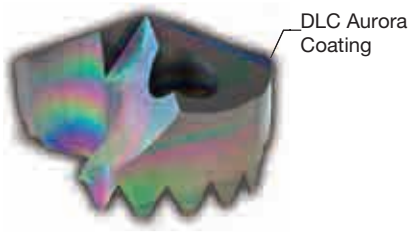


Part Material: Carbon Steel
O.D.: ø0.551"
Cutting Conditions: v_c=262 SFM

Sharper blade type and thinning overlap significantly reduce thrust and improve chip control, allowing stable drilling in low-rigidity setups.

NAL DLC Coated for non-ferrous and aluminum alloys

see next page for details



- **High efficiency drilling of Non-ferrous Materials**
  Very sharp cutting edge combined with DLC Aurora coating creates: Anti-adhesion, low cutting forces, and stable chip evacuation.

SMDT-NAL - DLC Coated for Non-Ferrous & Aluminum Alloy

■ SMDT-NAL - DLC Coating Features & Benefits

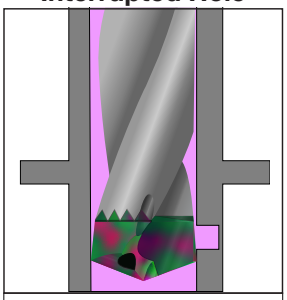
- Low friction coefficient allows for higher penetration rates by increasing the feed rate

$$\frac{\text{Feed Rate}}{\text{Drill Diameter}} = \text{Penetration Rate}$$

- Ultra smooth coating surface allows for stable chip evacuation.
- Aluminum welding resistance achieves excellent surface finish, and precision accuracy.
- High hardness coating(60 GPa) has superior abrasion resistance.

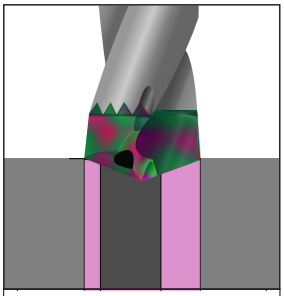
■ Application Examples

Interrupted Hole



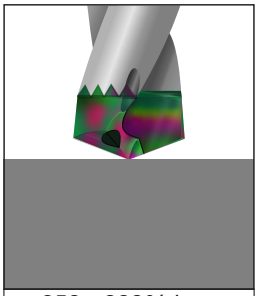
Stable drilling, and stable chip evacuation

Pre-cast Hole



Spot facing with WDX will increase position accuracy

Solid Hole



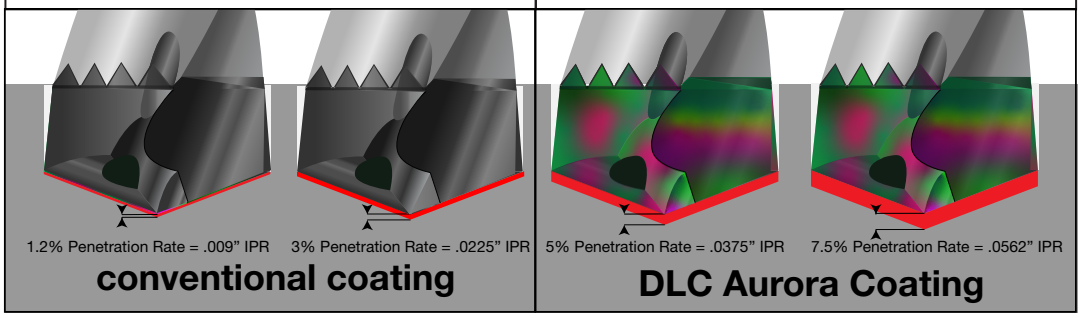
250 - 300% less cutting force than uncoated carbide

*SMDT07500NAL-DL1500 drill shown

■ SMDT-NAL Increased Penetration Rate

- DLC Aurora coating reduces friction by 250%-330%
- Allows for higher feed-rates and increased productivity
- Helps to reduce cost per unit and decrease drilling cycle time

Conventional Coating Max Penetration Rate: 3%	**SMDT-NAL - DLC Aurora Coating Max Penetration Rate: 7.5%**



■ Recommended Cutting Conditions - SMDT-NAL

N·m Recommended Tightening Torque (N·m)

*The SMDH○○○S Holder Cat. No. has been changed to SMDH○○○-1.5DF. The specifications have not changed.

MFS Ideal for drilling and burr control on non-flat surfaces

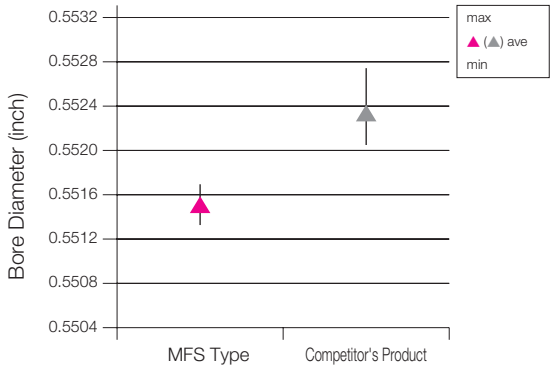
Suited to various types of drilling thanks to a point angle of 180°
Can be used for high-efficiency spot facing, drilling on non-horizontal surfaces such as inclined and cylindrical surfaces, and interrupted drilling. Also reduces burrs at the hole exit.

Improves machining stability
Achieves high rigidity by employing RS THINNING, which ensures thick web at the bottom.

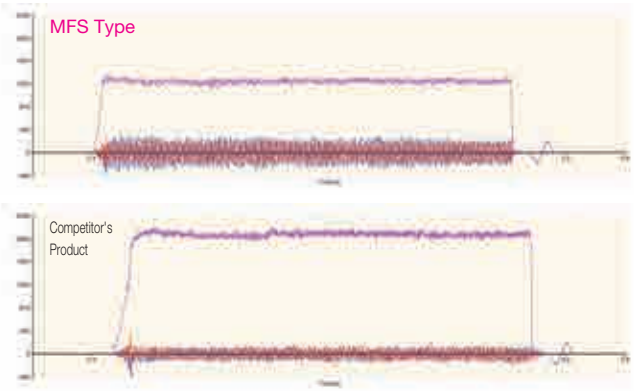
* See next page for true MFS Tip shape (slightly less than 180 degrees)

■ Performance

Comparison of Hole Diameter Accuracy



Comparison of Cutting Force



Tool	: SMDH 140S + SMDT 1400MFS
Part Material	: Carbon Steel
Cutting Conditions	: v_C=328 SFM, f =0.006 IPR, Hole depth 0.827", Wet

■ Precautions when Using MFS Heads

Application	No guide hole (final hole only)	With guide hole	Flat finishing of hole bottom
	 Flat surface / Non-flat surface	 Guide Holes	1.5D holder	○	○ (guide hole not needed)	○
3D to 12D holders	×	×	○

■ Recommended Speeds & Feeds - 1.5XD

Note:
1. The recommended hole depth is 2 x drill diameter. The depth is measured from the highest point of the hole on drilling in inclined surfaces.
2. The recommended cutting conditions are those for drilling on flat horizontal surfaces.
3. Adjust the feed rate according to the inclination angle when drilling on an inclined surface.
4. Set the feed rate at 70% or lower when the inclination angle is 30° or less.
5. Set the feed rate at 50% or lower when the inclination angle is larger than 30°.
6. This product is a drilling tool. Do not use it for traversing or helical milling.

N·m Recommended Tightening Torque (N·m)

*The SMDHOOOS Holder Cat. No. has been changed to SMDHOOO-1.5DF. The specifications have not changed.

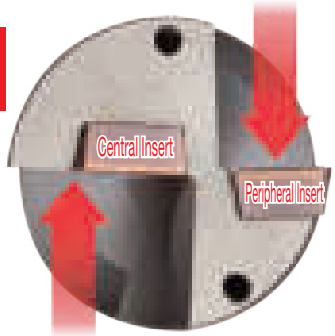
■ General Features

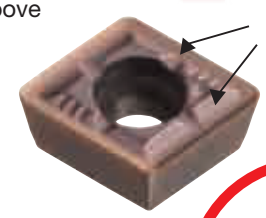
The SumiDrill WDX Indexable Drill has excellent cutting balance that provides stable hole drilling on a wide range of part materials from general steel to stainless steel and aluminum alloy. Available in three original chipbreaker styles, the inserts feature improved chip control and reduced cutting force for use in low-rigidity contexts.

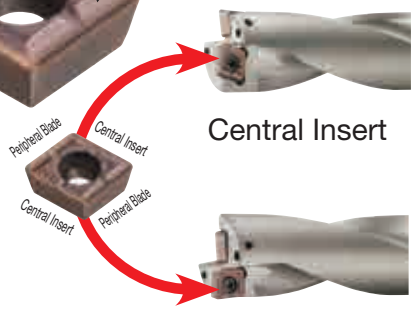
Design
Cutting force of central insert ≈ that peripheral blade



■ Features and Applications

- Balanced Design
  Cutting force during drilling is balanced between the central insert and peripheral insert. The relative position of each insert is optimized to provide stable drilling.
- Excellent Chip Control
  The chip evacuation direction can be controlled with the chip control groove at the center of the breaker, enabling good chip control.
- Versatile Tool for a Variety of Machining Applications
  Select among three types of breakers for different applications, allowing optimal drilling for a variety of work materials and conditions. Suitable for a wide range of applications including hole expansion, spot facing, external turning, and internal boring.
- Economical Four-Cornered Insert
  The insert has an extremely economical design where a single insert type can be used for the central insert or peripheral insert, with two corners for each position - a total of four usable corners.
- WDXT-M, along with ACM300, a grade for stainless steel with a strong edge, establishes stable tool life and excellent wear resistance.



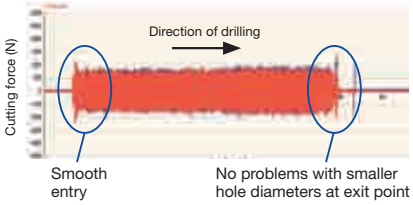


■ WDX Chipbreaker Selection Guide

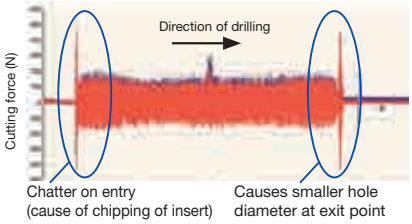
Type	L Chipbreaker	G Chipbreaker		H Chipbreaker	New M Chipbreaker
Features	For Low Feed with Chip Evacuation	General-Purpose	For Non-Ferrous Material	Strong Edged	Stainless Steel Machining
Appearance					
Cross Section					
■ Performance

- Balanced Design (Comparison of Horizontal Component Values)
  Balance is maintained at the through hole entry and exit points, and drilling is stable.

WDX



Conventional and Competitor's Products



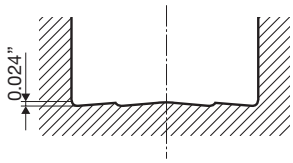
- Improved chip control
  Drill: WDX 200D3S25 (ø20.0)
  Part Mterial: 304 Stainless Steel
  Cutting Conditions: v_c=427 SFM, f=0.0024 IPR
  H=1.98", Wet

WDX

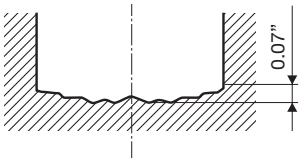
Conventional and Competitor's Products

- Finishing is easy because the hole bottom is almost flat.

Bottom of hole after drilling with WDX200D3S25



Bottom of hole after drilling with conventional tool (ø20)



For High-speed Drilling of Steel and Cast Iron ACP100

■ Features

Provides excellent wear resistance and high reliability thanks to our stress control coating technology. The ultra-fine crystal grain film of the Super FF Coat is achieved through our proprietary technology.

H=1.97" (through hole), Wet

For Drilling of Non-ferrous Metals AURORA Coat DL1500

■ Features

New DL1500 insert grade for drilling non-ferrous metal offers greatly improved adhesion resistance compared to conventional tools.
Ideal for drilling holes in copper alloys as well as aluminum alloys.

Drills for Deep Hole Drilling L/D = 5 (Availability: *ø13.0 to ø55.0 mm*)

■ Features

The SumiDrill WDX for 5D drilling features a specially designed flute shape and enlarged coolant hole for excellent chip evacuation even during deep hole drilling.

Large coolant hole

Coolant supply guide

Special Flute Shape for L/D=5

■ Performance

Tool Holder Features	Figure	Cutting Force	Machined Surface (Exit)
WDX260D5S32 **Special Flute Shape for L/D=5** * Designed with emphasis on chip evacuation Expanded flute design improves chip evacuation for stable drilling performance even with holes up to 5 L/D.			Good machined surface down to end of hole Other Tool **Flute Shape for L/D=4** * Designed with emphasis on drill rigidity Flute design enables greater rigidity of the drill, achieving stable drilling of shallow holes up to 4 L/D.			Poor machined surface due to chip blockage at bottom of hole (near 5 L/D) 
Part Material: 304 Stainless Steel, Insert: WDXT 073506-G
Cutting Conditions: v_C=492 SFM, f=0.002 IPR, H =5.118" (through hole), Wet

2nd Recommendation (P)

P Steel — For Low Feed with Chip Evacuation — L ACP300
- For drilling various types of Steel
- High speed and low feed is recommended if there are issues with chip control
- Decrease the feed if vibration occurs due to burnt chips

P Steel — General-Purpose — G ACP100
- For drilling of general steel and alloy steel, when prone to significantly large flank wear

P Steel — For Low Feed with Chip Evacuation — L ACP100
- For low-feed conditions

P Steel — Strong Edged — H ACP300
- For drilling with interruptions (entry/through) due to slanted entry, reduce the feed rate in the interrupted area (around f = 0.0019 IPR)
- For insufficient cutting edge strength due to drilling of hardened steel (heat treated)

P Steel — Improved chip control (low carbon steel, etc.)

P Steel — Insufficient wear resistance

P Steel — Initial chipping measures (interruption, high hardness, etc.)

1st Recommendation (P M K N)

General-Purpose — G
- P Steel — For general steel & alloy steel drilling — ACP300
- K Cast Iron — For cast iron drilling — ACK300
- N Non-Ferrous — For non-ferrous metal drilling — DL1500

M Stainless Steel — For stainless steel drilling — ACM300
Stainless Steel — M — New

K Cast Iron — Insufficient wear resistance (high-speed drilling)

K Cast Iron — Initial chipping measures (interruption, high feed, etc.)

M — Lack of chip evacuation (extension)

2nd Recommendation (M K)

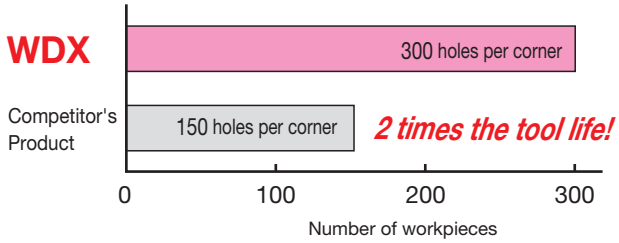
K Cast Iron — General-purpose — G ACP100
- When heavy flank wear occurs in cast iron drilling
- To limit wear in high-speed, low to medium feed conditions

K Cast Iron — Strong Edged — H ACK300
- When interrupted drilling is performed due to slanted entry, etc. as with steel drilling
- For insufficient cutting edge strength due to high-feed drilling

M — General-Purpose — G ACP300
- When chips extend and clog

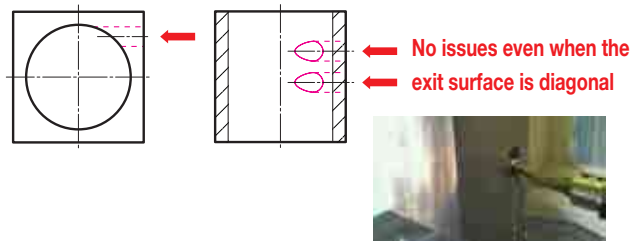
*ACP100 is the first recommendation for steel with a hardness of 200HB or greater, or for high-speed drilling of steel.

■ Application Examples



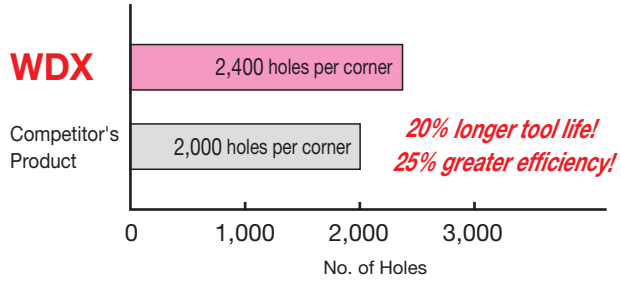
Part Material : Ductile Cast Iron Machine component
Tool : WDX 205D3S25
Insert : WDXT 063006-G (ACK300)
Cutting Conditions : v_c=400 SFM, f =0.006 IPR, H =1.3" , through, Wet

·Significant increase in tool life: twice that of conventional tools.
·Stable cutting with minimal cutting force.



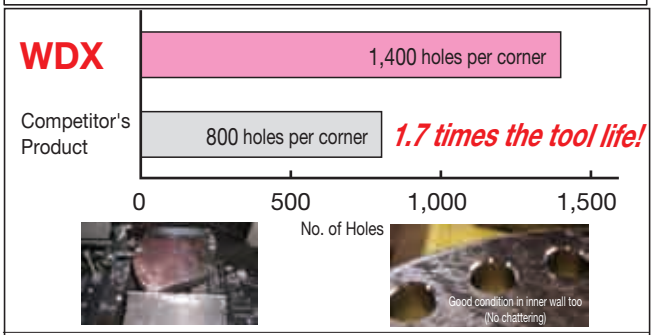
Part Material : Carbon Steel Plate
Tool : WDX 430D3S40, Insert : WDXT 125012-H (ACP300)
Cutting Conditions : v_c=446 SFM, f =0.0.006 IPR, H =2.36"+1.97" (semicircle area), through, Wet

·Enables stable drilling even in unstable cutting conditions (interrupted cutting at deepest point).
·Quieter cutting than conventional tools.



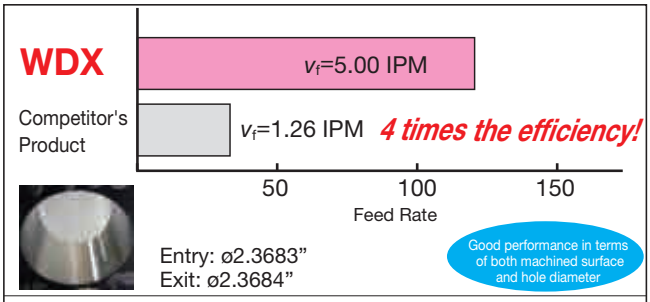
Part Material : 4140 Steel Machine component
Tool : WDX 200D3S25, Insert : WDXT 063006-G (ACP300)
Cutting Conditions : v_c=515 SFM, f =0.008" , H =0.748" , through, Wet
(competitor's product : v_c=515 SFM, f =0.006" , H =0.748" , through, Wet)

Good chip control even in high-efficiency conditions. Good stability with low vibration during cutting. 25% greater efficiency and 20% longer tool life.



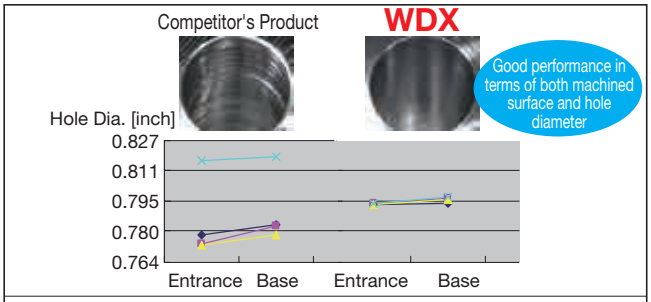
Part Material : Carbon Steel Plate
Tool : WDX 145D3S20, Insert : WDXT 042004-L (ACP300)
Cutting Conditions: v_C=673 SFM, f =0.0165" , H =0.591" , through, Wet

·Significant increase in tool life - 1.7 times longer.
·Good performance with no chatter on the machined surface, even with low-rigidity clamps.



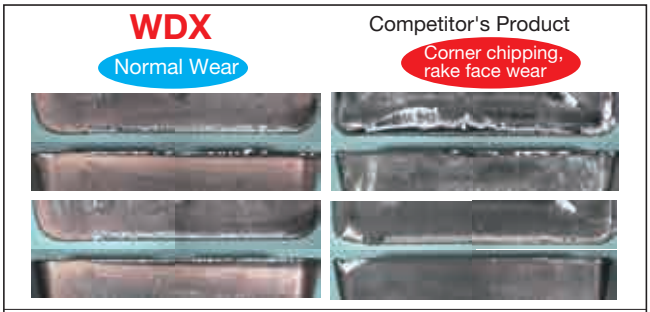
Part Material : Medium Carbo Steel Plate
Tool : WDX 600D3S40
Insert : WDXT 186012-G (ACP300)
Cutting Conditions: v_C=492 SFM, f =0.006 IPR, H =2.36" , through, Wet
(conventional tool :v_C=98 SFM, f =0.008 IPR, H =2.36" , through, Wet)

·Achieves steady machining even at large diameters!
·Achieves 4 times the efficiency of conventional tools!



Part Material : Alloy Steel Machine component
Tool : WDX 200D5S25
Insert : WDXT 063006-G (ACP300)
Cutting Conditions: v_C=607 SFM, f =0.005 IPR, H =3.425" , through, Wet

·Good machined surface!
·Consistent bore diameter



Part Material : Carbon Steel Tractor links
Tool : WDX 205D5S25
Insert : WDXT 063006-G (ACP300)
Cutting Conditions: v_C=328 SFM, f =0.0043 IPR, H =2.36" , through, Wet

·Achieves steady machining even at L/D=5
·Reduces insert chipping and wear for stable tool life

Part Material : Alloy Steel Bearing for wind power generator
Tool : WDX330D5S40
Insert : WDXT094008-L (ACP300)
Cutting Conditions: v_C=479 SFM, f =0.004 IPR, H =0.622" , through, Wet

·Eliminates defects in workpieces caused by insert chipping!

	Ductile Cast Iron			H	ACK300	300 - 500	.004 - .008	.004 - .012	.006 - .014	.006 - .017
S	Exotic Alloy (Heat-Resistant Alloy, Super Alloy, Titanium Alloy, etc.)		200 ~ 375	G	ACP300	80 - 250	.002 - .005	.003 - .007	.003 - .008	.003 - .010
N	Aluminum Alloy			G	DL1500	650 - 1200	.003 - .006	.003 - .007	.004 - .008	.005 - .010
	Copper Alloy			G	DL1500	600 - 900	.003 - .006	.003 - .007	.004 - .008	.005 - .010

For the P and K grades for which ACP300 and ACK300 inserts are the first recommendation, ACP100 inserts are the second recommendation.
In this case, it is recommended to set the cutting speed (V_c) to 130% and the feed rate (*f*) to 75% of the figures in the table above.

	Ductile Cast Iron			H	ACK300	300 - 500	.004 - .008	.004 - .012	.006 - .014	.006 - .017
S	Exotic Alloy (Heat-Resistant Alloy, Super Alloy, Titanium Alloy, etc.)		200 ~ 375	G	ACP300	80 - 250	.002 - .005	.003 - .007	.003 - .008	.003 - .010
N	Aluminum Alloy			G	DL1500	650 - 1200	.003 - .006	.003 - .007	.004 - .008	.005 - .010
	Copper Alloy			G	DL1500	600 - 900	.003 - .006	.003 - .007	.004 - .008	.005 - .010

For the P and K grades for which ACP300 and ACK300 inserts are the first recommendation, ACP100 inserts are the second recommendation.
In this case, it is recommended to set the cutting speed (V_c) to 130% and the feed rate *(f)* to 75% of the figures in the table above.

For the P and K grades for which ACP300 and ACK300 inserts are the first recommendation, ACP100 inserts are the second recommendation.
In this case, it is recommended to set the cutting speed (V_c) to 130% and the feed rate (*f*) to 75% of the figures in the table above.

WDX - Inch 5D (Internal Coolant Supply)

	Copper Alloy			G	DL1500	600 - 900	.003 - .006	.003 - .007	.004 - .008	.005 - .010

For the P and K grades for which ACP300 and ACK300 inserts are the first recommendation, ACP100 inserts are the second recommendation.
In this case, it is recommended to set the cutting speed (V_c) to 130% and the feed rate (*f*) to 75% of the figures in the table above.

■ Lathe Machining Guidelines

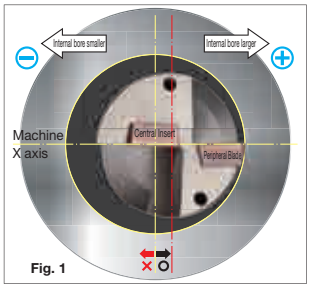

Fig. 1

Fig. 2

■ Drill Mounting

- Set the drill so that the peripheral insert is parallel to the X axis of the machine. (Fig.1)
- Press the end of the flange of the drill tightly against the face of the holder when tightening the bolt.

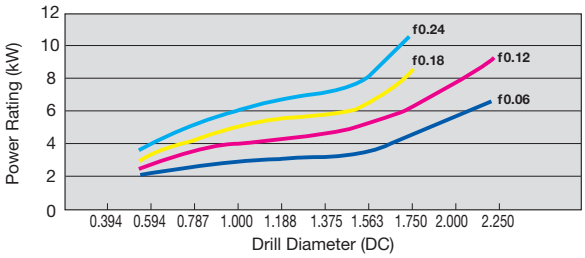
■ Adjusting work diameter (offset)

- The work diameter is adjustable by moving the machine X axis.
- Make the adjustment by moving in the positive direction of the X axis (enlarging the bore diameter). Moving the X axis in the negative direction (to reduce the bore diameter) is not recommended as the holder may interfere with the hole. (See Fig. 1)
- The maximum allowable adjustment (offset) differs depending on the drill diameter.

■ Other notes

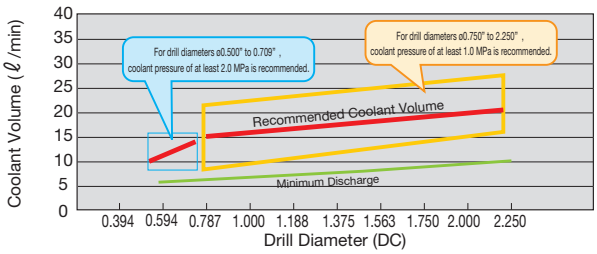
- When the drill is mounted on a lathe, the center of the central insert is designed to be 0.15 to 0.2 mm below the centre of the spindle.
- If the spindle deviates so far off centre that the centre of the central insert lies above the spindle centre, the central insert will break.
- Set the depth of cut for turning or internal boring work to 1/5 or less of the drill diameter (max. 5 mm or less). (Example: Set depth of cut to 4 mm or less for a drill diameter of ø20 mm)
- Install a cover to prevent injury from possible chip fly-out (see disc-shaped chip in Figure 2) when through boring on a lathe. If your equipment has no cover, attach a cover or similar part for your safety.

■ Typical Power Ratings



<CAUTIONS>
- Power ratings are subject to change based on conditions such as work material and cutting speed, and should only be used for reference.
- Cutting Conditions (Reference)
  Work Material: S50C (230HB)
  Cutting Speed: v_C=492 SFM

■ Typical Coolant Volume



<CAUTIONS>
- Coolant volume is a factor that affects drilling performance, particularly with respect to chip evacuation and lubricity.
  This is particularly important for chip evacuation and lubricity.
- Coolant pressure should be set higher for small drills. (ø18.0 mm or smaller)
- Coolant volume is usually adjusted by changing the coolant pressure provided on most CNC machines.
- This table provides guideline values only. More coolant may be required depending on the machine, coolant and work material.

■ Precautions for Attaching and Removing Inserts

- Before mounting the insert, remove all traces of foreign matter on the insert seat using air or other means.
- When using the wrench, align it to the axis of the screw and press while turning. (See Fig. 3)
  If the wrench is not aligned with the screw, the insert will be insufficiently clamped
  and the tip of the wrench and/or the Torx hole of the screw may become deformed.
- Do not allow clearance between the insert seat and drill when mounting the insert (Fig. 4, Part A).
  Figure 4 shows a properly mounted insert.

* It is normal for the outer sides of the central insert to have clearance because it is clamped at its center and pushed to the rear.

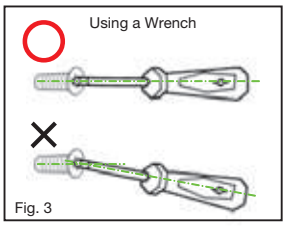


Fig. 3

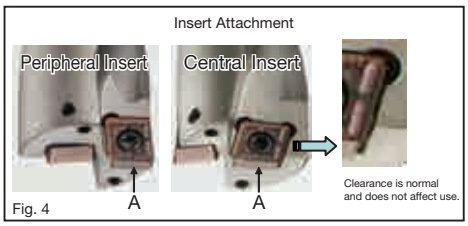

Fig. 4

■ Troubleshooting

Problem	Symptom	Cause	Countermeasures
Too much variation in hole diameter	Drilled hole diameter is larger than desired	· Deflection of the holder due to high thrust force	· Decrease the feed rate to decrease the thrust force. · Make an adjustment on the X axis.
	Drilled hole diameter is smaller than desired	· The cutting edge backs off and does not enter the workpiece	· Increase the feed rate. · Make an adjustment on the X axis.
	Pronounced difference in hole diameter at entrance and bottom	· Packing of chips	· Increase the feed rate to improve chip evacuation. · Use an L breaker for chip control.
Poor quality machined hole surface	Poor machined surface from entrance to bottom of hole	· High cutting force · Low rigidity of workpiece	· Decrease the feed rate. · Review tooling to improve rigidity.
	Poor machined surface at bottom of hole	· Machined surfaces damaged by chips	· Increase the feed rate to improve chip evacuation. · Use an L type breaker for chip control.
Insert is broken	Breakage on central insert (centre)	· Improper adjustment of centre height · Insert is not strong enough	· Check the centre height again. · If the drill is being used on a lathe, try flipping the drill 180°. · Use a strong edge chipbreaker (H).
	Breakage on peripheral insert	· High cutting load in cutting edge	· Decrease the feed rate to decrease cutting load. · Use a strong edge chipbreaker (H).

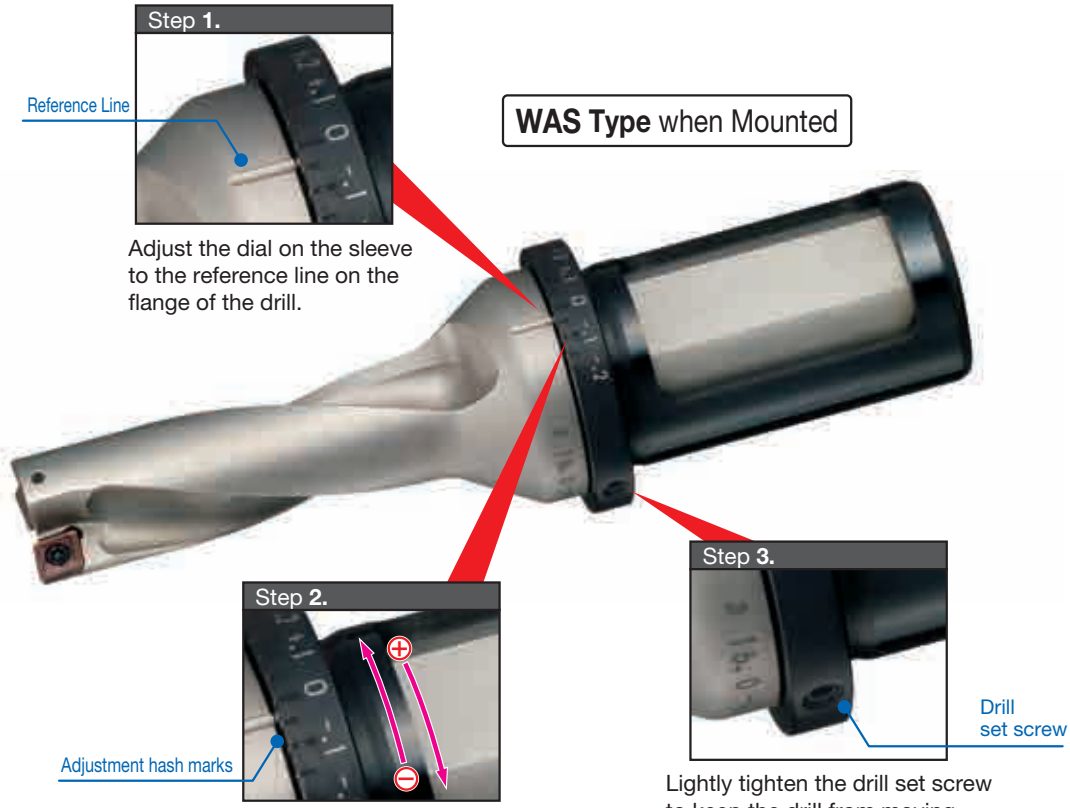
Diameter Adjustment Range indicates the range in which the diameter can be adjusted.
The dedicated Eccentric Sleeve WAS Type for the SumiDrill WDX Type provides ±0.3 mm of adjustment when drilling holes.

★: Worldwide Warehouse Item

Cautions for Use

1. The dial is for reference purposes. Always measure the actual work diameter and adjust accordingly.
2. Not usable with collet chuck type holders.
   Use a side-locking type holder.
3. Use this product under high rigidity conditions.
   This product is not recommended for deep hole drilling such as 5D and low rigidity conditions.

Directions (Adjusting the Work Diameter)



WDX - Inch 4D Side Port (Internal Coolant Supply)

■ General Features

Sumitomo Electric Carbide, Inc. is now offering WDX-L Indexable Drill with side port coolant. Due to not all spindles being coolant-thru, the WDX-L allows for customers to use coolant through the side port.

■ Features and Applications

- Diameters available in 0.5625" to 2.5000"
- WDX-L uses WDXT inserts (same as WDX style)
- Available in 4XD

PDL / PCT

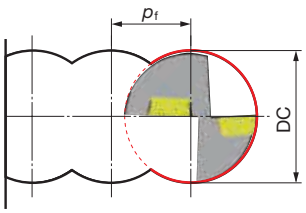
■ General Features

Cutting feed in the Z axis direction, where tool rigidity is high, allow high-efficiency, stable roughing for aeronautic components and dies with long tool overhang, where machining efficiency in long neck machining and packeting is hard to increase.

■ Features

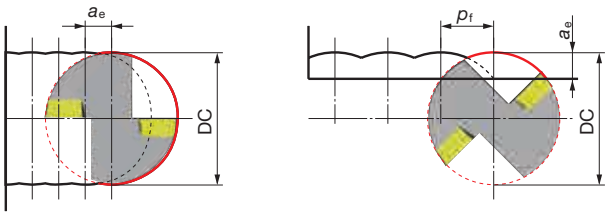
- The flat cutting edge design produces near-flat bottom profiles to reduce depth of cut variation during finishing.
- All sizes come with oil holes for supplying coolant internally to improve chip evacuation performance.
- Durable body with special surface treatment offers improved tool life and reliability.
- Utilizing SumiDrill WDX inserts for handling a wide range of work materials, from steel to non-ferrous metals and exotic alloys.

- The PDL has a central insert, enabling radial depth of cut beyond the tool's radius, pick feed cutting, drilling, pocketing, etc.

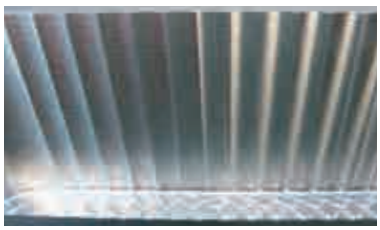


Keep the value of p_f for PDL tools to less than 70% of the tool diameter (DC).

- Although the PCT has limited radial depth of cut, the tool has a high effective number of teeth enabling it to perform high feed cutting. (Medium finishing of corners, hole expansion, deep groove processing, etc.)

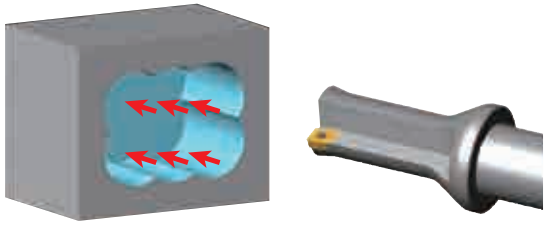


Keep the value of p_f for PCT tools to less than 50% of the tool diameter (DC).
For a_e, refer to the dimension under "a_e max" in the stock/dimensions table titled "Holders Max. Depth of Cut: 3D/5D".



■ Application Examples

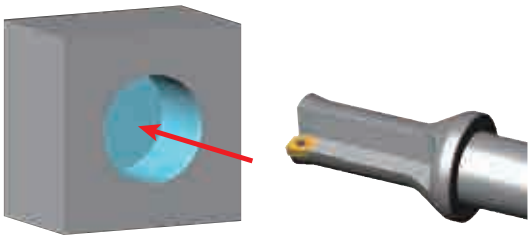
Pocketing PDL Part Material: Titanium alloy



Tool : PDL400D2S40 (ø40)
Insert : WDXT125012-G
Grade : ACK300

Cutting Speed : v_c=131 SFM
Feed Rate : f=0.0027 IPR
(v_f=0.878 IPM)
Depth of Cut : a_e (p_l)=0.984"

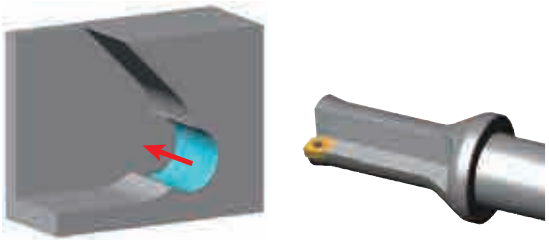
Drilling PDL Part Material: 316 Stainless



Tool : PDL200D3S25 (ø20)
Insert : WDXT063006-G
Grade : ACP300

Cutting Speed : v_c=591 SFM
Feed Rate : f=0.0039 IPR
(v_f=11.26 IPM)
Depth of Cut : a_e (p_l)=0.787"

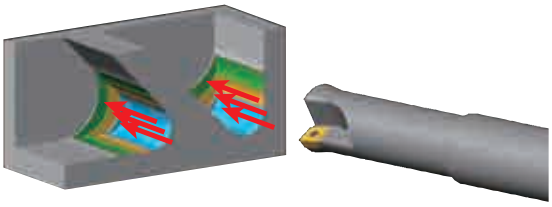
Corner Fillet Removal PDL Part Material: 316 Stainless



Tool : PDL250D2S25 (ø25)
Insert : WDXT073506-G
Grade : ACP300

Cutting Speed : v_c=459
Feed Rate : f=0.0039 IPR
(v_f=7.008 IPM)
Depth of Cut : a_e(p_l)=0.590"

Corner Finishing PCT Part Material: Titanium alloy

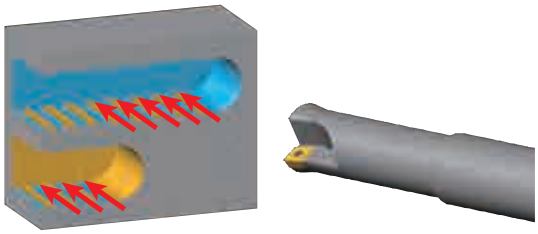


Tool :
PCT320D3S32 (ø32)
PCT250D3S25 (ø25)
PCT200D3S20 (ø20)
Grade : ACK300

Insert :
WDXT094008-G
WDXT073506-G
WDXT063006-G

Cutting Speed : v_c=164 SFM
Feed Rate : f_z=0.0016 ipt
(v_f=3.15 to 14.99 IPM)
Depth of Cut : a_e (p_l)=0.125 to 0.256"

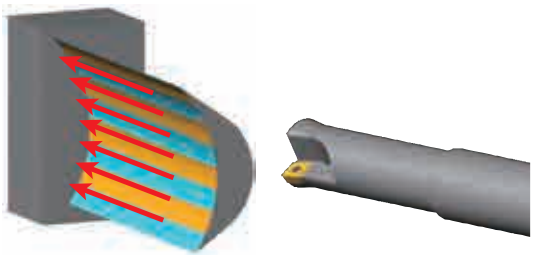
Groove Processing PCT Part Material: Titanium alloy



Tool : PCT320D5S32 (ø32)
Insert : WDXT094008-G
Grade : ACK300

Cutting Speed : v_c=131 SFM
Feed Rate : f_z=0.0014 ipt
(v_f=2.205 IPM)
Depth of Cut : a_e (p_l)=0.197"

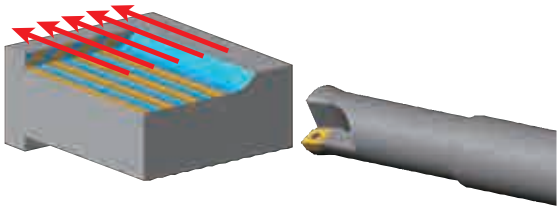
Contouring PCT Part Material: Stainless Steel



Tool : PCT250D5S25 (ø25)
Insert : WDXT073506-G
Grade : ACP300

Cutting Speed : v_c 492 SFM
Feed Rate : f_z=0.002 ipt
(v_f=15.039 IPM)
Depth of Cut : a_e=0.118"

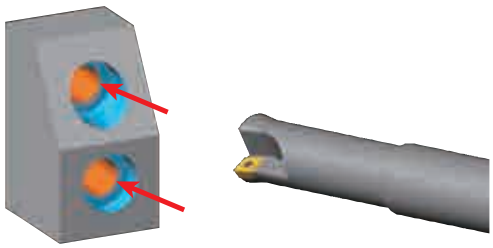
Shoulder Plunging PCT Part Material: 304 Stainless



Tool : PCT320D3S32 (ø32)
Insert : WDXT094008-G
Grade : ACP300

Cutting Speed : v_c=591 SFM
Feed Rate : f_z=0.003 ipt
(v_f=21.14 IPM)
Depth of Cut : a_e=0.276
p_l=0.197

Counterboring PCT Part Material: Cr-Mo Steel



Tool : PCT200D5S20 (ø20)
Insert : WDXT063006-G
Grade : ACP300

Cutting Speed : v_c=492 SFM
Feed Rate : f_z=0.003 ipt
(v_f=28.19 IPM)
Depth of Cut : a_e=0.138"

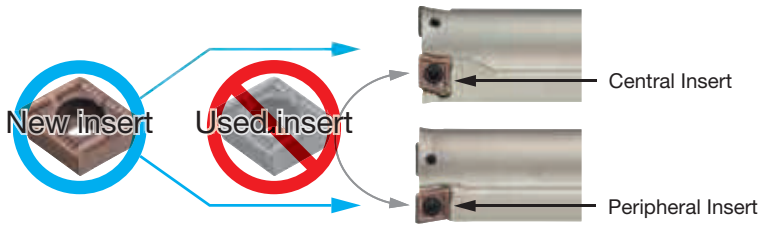
● Precautions for Mounting Inserts



PDL Type: Inserts can be used on either the central or peripheral position and both corners are used.
Used peripheral inserts cannot be used as central insert and similarly,
used central inserts cannot be used as peripheral insert.

For the P and K grades for which ACP300 and ACK300 inserts are the first recommendation, ACP100 inserts are the second recommendation.
In this case, it is recommended to set the cutting speed (V_c) to 130% and the feed rate (f) to 75% of the figures in the table above.

For the P and K grades for which ACP300 and ACK300 inserts are the first recommendation, ACP100 inserts are the second recommendation.
In this case, it is recommended to set the cutting speed (V_c) to 130% and the feed rate (f) to 75% of the figures in the table above.

In this case, it is recommended to set the cutting speed (V_c) to 130% and the feed rate (f_z) to 75% of the figures in the table above.

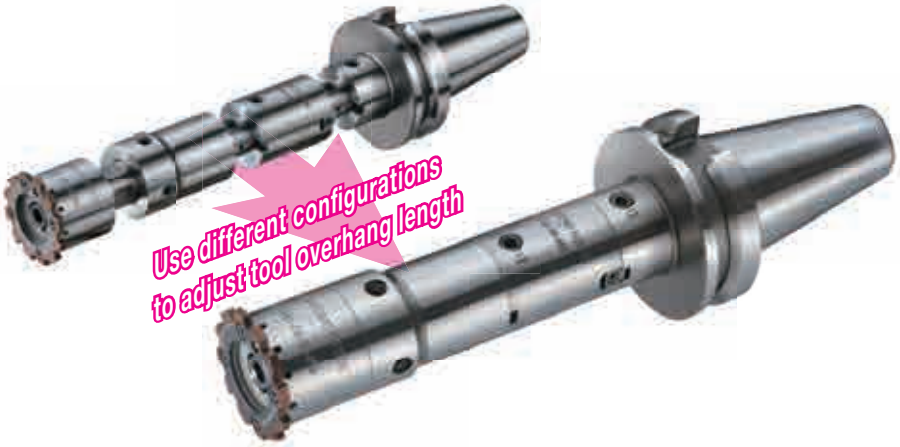
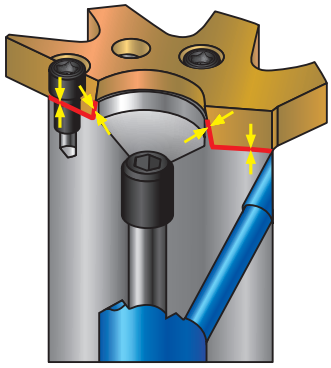
MEMO

■ Features

- Achieves high efficiency through high speed and high feed capabilities! (v_c=164 to 1,640 SFM, f=0.016" to 0.047" IPR)
- Compatible with a wide range of cutting conditions, allowing management of cutting conditions and coolant supply
- Designed with minimal cutting edge length, eliminating galling and blemishes for improved quality and reliability
- Adoption of indexable cutting edge design improves reliability of quality and tool life, eliminating variability in tool life among reground inserts
- Cutting edge diameters from *ø7.6 to ø140.6 mm* available
- Easy insert replacement
- Flexible tool overhang lengths possible by combining the modular extension/arbor and shank with insert runout adjustment mechanism





A taper supports the insert on two faces (based on the HSK standard) for repeatability within 4 µm using random inserts
